

PART. B6252B

art. G701/2

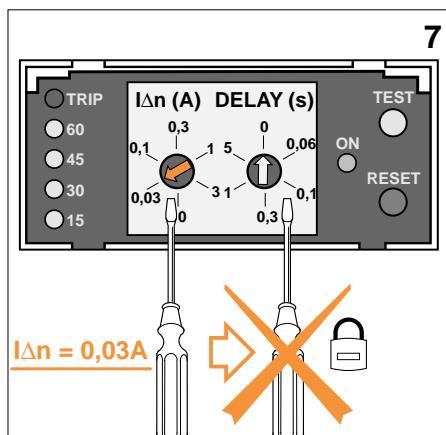

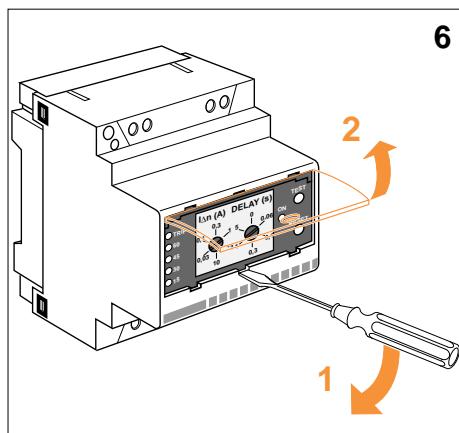

Btdin®

- 1 - Regolazione $I_{\Delta n}$ di intervento
- 2 - Pulsante di prova
- 3 - Pulsante per il ripristino manuale
- 4 - Segnalazione strumento alimentato (LED verde)
- 5 - Segnalazione relé differenziale intervenuto (LED rosso)
- 6 - Regolazione ritardo d'intervento
- 7 - Segnalazione $I_{\Delta n}$ dispersa (LED gialli)

- 1 - Einstellung Einsatza $I_{\Delta n}$
 - 2 - Prüftaste
 - 3 - Taste für manuelle Rücksetzen
 - 4 - Anzeige Instrumentepeisung (grüne LED)
 - 5 - Anzeige Differentialrelais hat angesprochen (rote LED)
 - 6 - Einstellung Ansprechverspätung
 - 7 - Anzeige Streu- $I_{\Delta n}\%$ (gelbes LED)
- 1 - Réglage du $I_{\Delta n}$ de intervention
 - 2 - Touche de contrôle
 - 3 - Touche de reprise manuelle
 - 4 - Témoin appareil alimenté (LED vert)
 - 5 - Témoin intervention relais différentiel (LED rouge)
 - 6 - Réglage retard d'intervention
 - 7 - Indication $I_{\Delta n}\%$ dispersée (LED jaunes)
- 1 - Release $I_{\Delta n}$ regulation
 - 2 - Test button
 - 3 - Button for manual resetting
 - 4 - Powered instrument signal (green LED)
 - 5 - Released earth leakage relay signal (red LED)
 - 6 - Release delay regulation
 - 7 - % of dissipated $I_{\Delta n}$ signal (yellow LED)
- 1 - Regulación $I_{\Delta n}$ de intervención
 - 2 - Pulsador de prueba
 - 3 - Pulsador para la restauración manual
 - 4 - Señalización aparato alimentado (LED verde)
 - 5 - Señalización intervención relé diferencial (LED rojo)
 - 6 - Regulación retardo de intervención
 - 7 - Señalización % $I_{\Delta n}$ dispersa (LED amarillos)

	\varnothing INT. (mm)	I_{Δ} min. (A)
G701/2		
G701T/35N	35	0,03
G701T/80N	80	
G701T/110N	110	0,1
G701T/140N	140	
G701T/210N	210	0,3
G701T/150A	150	
G701T/300A	300	1

Regolando una $I_{\Delta n}$ di 30mA non è possibile impostare alcun ritardo.

Beim Einstellen eines Differentialnennstroms von 300 mA kann keine Verspätung eingestellt werden.

En fixant un $I_{\Delta n}$ de 300mA, aucun retard ne peut être programmé.

When residual sensitivity $I_{\Delta n}$ is set at 300mA no trip delay is available.

Al regular una $I_{\Delta n}$ de 300 mA, no es posible establecer ningún retardo.
