1. USE

This device works as a traditional 2-way switch (manual ON, manual OFF) but, in addition, it automatically turns off the light after 10 minutes without movement detection.

Particularly suitable for rooms where a light can stay switched on for a long time (basement, attic, laundry room, guest room) and rooms where user forgets regularly to switch off (child room...).

5. OPERATION

5.1 Energy saving switch

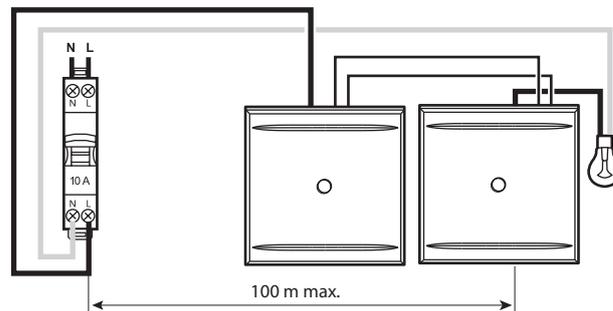

5. OPERATION (continued)

■ 5.2 Two-way switch + energy saving switch

The IR sensor is activated when the light is switched on from one of the two switches. The energy saving can be installed both near or far from the load and it opens the circuit after 10 minutes with no movement detection.

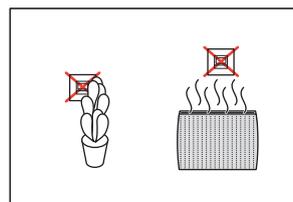

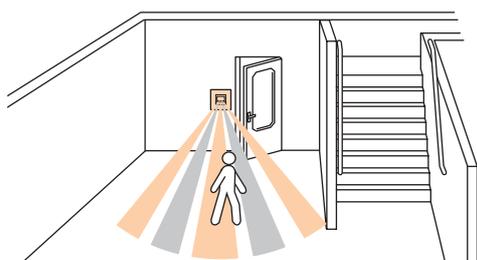

■ 5.3 Energy saving switch + energy saving switch

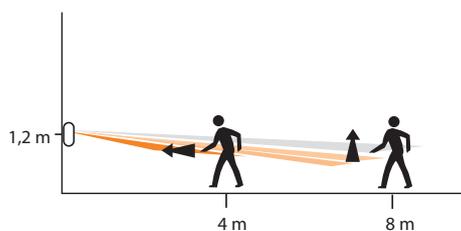

The IR sensor of the two switches are both activated when the light is switched on. The light will switch off when one of the two switches stays 10 minutes with no movement detection.
