

Leadership in fusible circuit protection solutions

EATON

Powering Business Worldwide

Contact details

Customer satisfaction team

Eaton's customer satisfaction team is available to answer questions regarding Eaton's Bussmann series products.

Europe calls can be made between:

Monday — Friday 7.30 a.m. - 5.00 p.m. GMT

The customer satisfaction team can be reached via:

Phone: 00 44 (0) 1509 882 600

Fax: 00 44 (0) 1509 882 786

Email: bulesales@eaton.com

www.my.eaton.com

www.my.eaton.com supports the following product lines: B-Line series, Bussmann series, Crouse-Hinds series, Lighting solutions, Cooper Power series and Wiring devices.

Get started today at www.my.eaton.com by clicking 'Request User ID and Password'.

- Easy to Navigate
- Simple to Use

We make what matters work.*

At Eaton, we believe that power is a fundamental part of just about everything people do. That's why we're dedicated to helping our customers find new ways to manage electrical, hydraulic and mechanical power more efficiently, safely and sustainably. To improve people's lives, the communities where we live and work, and the planet our future generations depend upon. Because this is what really matters. And we're here to make sure it works.

Company overview

Eaton is the leading source of fusible circuit protection solutions in the global marketplace. Eaton's Bussmann series products are approved for use around the world and meet agency requirements and international standards: IEC, VDE, DIN, UL, CSA, BS and others.

The headquarters for Eaton's Bussmann series product line is located in Burton-on-the-Wolds, Leicestershire (UK) and is part of Eaton's Industrial Control and Protection EMEA division.

Eaton manufactures over 50,000 Bussmann series part numbers, covering extensive fusible circuit protection solutions for a wide range of applications: residential, industrial, motor protection, power conversion and distribution.

Eaton has been a leading exponent in the design, development and manufacture of fuse links and their associated accessories for more than 100 years and has supplied fuse links to more than 90 countries worldwide.

Eaton's team of specialist Engineers and Field Applications Engineers plays a leading role in international standardisation of fuse links offering comprehensive advice on selection and applications.

With a continual commitment to meet our customers' needs with innovative high quality products with ISO 9001 'approval systems', Eaton is the supplier of choice for circuit protection solutions.

Introduction to medium voltage fuse link technology

Offering unparalleled short-circuit interruption capabilities, Medium Voltage (MV) current-limiting fuse links are the principle protection device used by electrical utilities and switchgear manufacturers throughout the world.

Safe, reliable, environmentally friendly and cost effective, MV Fuse links are the protection device of choice for distribution circuits due to their speed of operation and current limiting ability in the event of a short-circuit fault.

The diagram below shows the operation of a fuse link interrupting a short-circuit fault, achieving a current zero well within the first half-cycle of a fault. Energy let-through into the site of a fault maybe typically only 1/500th of that of any other type of switching device.

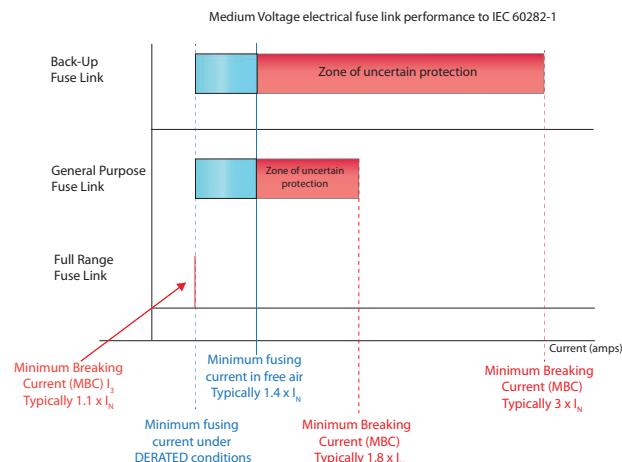

The speed of operation reduces the effect of short-circuit currents, dramatically limiting the energy delivered to the faulted circuit, preventing the catastrophic results of high faults and disturbing voltage arcs. The fuse link operation significantly limits the arc-flash hazard at the fault location. Improved power supply quality also results from the use of fuse links. High fault currents are interrupted in a few milliseconds, minimising voltage dips in system supply voltage.

The main standard covering Medium voltage (MV) fuse links is IEC 60282-1, 2009. IEC defines MV as from 1 kV to 72.5 kV.

Current-limiting MV Fuse links, split into three internationally recognised types: back-up (or sometimes called partial range), fuse links, which will interrupt any current from their rated Breaking capacity down to a Minimum breaking current, specified by the manufacturer. General purpose MV Fuse links will interrupt all currents that will melt the elements within one hour. Full range MV Fuse links can interrupt any current below the rated Breaking capacity that melts the fuse elements satisfactorily.

The diagram below illustrates the three performance criteria in terms of their Minimum breaking current I_b .

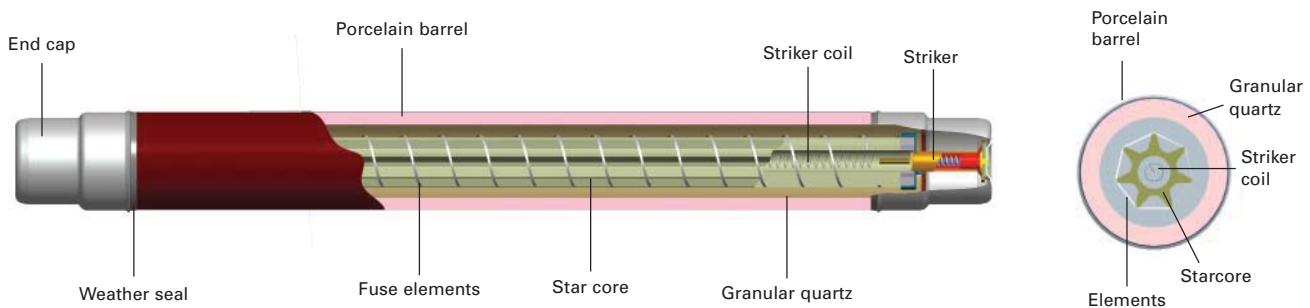

Current-limiting MV Fuse links are similar in construction to Low voltage (LV) cartridge types. Fuse elements do need to be much longer however to safely interrupt a medium voltage short-circuit. This is achieved by winding the elements round an internal core or holder, often called a star-core or spider; using this technique a one metre length element can be accommodated in a 250 mm length body. The elements are surrounded by a pure, highly compacted granular quartz filler.

Like a LV fuse link, a MV fuse link has a ceramic body. Most current-limiting MV Fuse links are also fitted with a striker mechanism. This is used to operate the trip bar or mechanism in a fuse-switch combination, fuse-switch or ring main unit (RMU) to achieve low overload fault interruption and three-phase disconnection.

Typically striker mechanisms are driven by a spring mechanism, triggered by a thin striker wire or striker coil running the length of the fuse link, connected in parallel to the fuse link elements. The striker coil is of much higher resistance than the fuse link elements, so a current only flows through the striker coil when the fuse link elements melt. The current heats up the striker coil and this in turn melts the wire retaining the spring, releasing it and pushing out the striker.

Introduction to medium voltage fuse link technology

Non-current limiting

Essentially, non-current limiting fuse links have short elements and incorporate some means of lengthening the arc after the element melts, extinguishing the arc and preventing re-ignition. These are known as expulsion fuse links.

Expulsion fuse links are an effective way of protecting overhead distribution lines and transformers. They are designed for outdoor use only and comprise a tin or copper fuse element in series with a flexible braid in a tube. The tube forms one side of a triangle, with a latched connection at the top and a hinge at the bottom. The braid emerges from one end of the fuse link and is held in tension by a spring downwards under gravity. Under fault conditions, the fuse link swings downwards, the arc is lengthened, extinguished and prevented from restriking.

Thermal effects of low overload faults

During overload faults lasting a long time, it is possible for medium voltage (MV) elements to get very hot prior to actually melting. Given that silver has a melting temperature of 960°C, for fuse links with no temperature limitation, this can result in a fuse barrel temperature of over 400°C and 180°C at the insulating surface surrounding the fuse. To prevent deterioration of the insulation and to the fuse link itself, all MV Fuse links should incorporate some form of technology to limit the thermal stress- heating, that is possible under prolonged low overload faults, often referred to as temperature limiting technology.

Since the launch of its first MV Fuse links almost half a century ago, Eaton has employed M-effect technology to achieve temperature limitation throughout its MV Fuse link range. A small mass of special low melting point alloy is added to each fuse element, this has the effect of drastically reducing the temperature of the MV Fuse link during operation. The larger cross section of the fuse link elements, made possible by use of this feature, ensures cooler running and lower power dissipation under normal service conditions than comparable temperature limitation technology.

Other manufacturers employ a temperature-limiting (or thermal) striker to overcome their overheating problems. In general with this approach the maximum temperatures reached by the fuse link and its surrounding insulation are not as low as with the use of M-effect. Such a solution is no more effective than use of M-effect on the fuse link elements and moreover does not bring the additional advantages of lower watts loss, cooler running and greater withstand against transient surge currents.

When an Eaton's Bussmann series fuse link operates under low overload fault conditions the maximum temperature rise of the fuse link is such that the temperature of the surrounding synthetic insulation remains below the temperature limits for all insulated fuse switchgear. The fuse barrel therefore remains intact and the fuse carrier and its contacts remain unimpaired.

Typically an Eaton's Bussmann series MV Fuse link of a given rating may run 10-30°C cooler than comparable fuse links which do not employ M-effect. This advantage is particularly useful when the MV Fuse link is used in totally enclosed all insulated switchgear, such as cast resin fuse-switches or compact SF₆ insulated Ring Main Units (RMUs), or GIS HV switchgear, since less derating is required and hence a smaller rating of MV Fuse link will do the same job as a higher rated MV Fuse link from another manufacturer.

In short M-effect fuse links are generally safer, give better protection and are longer lasting than alternative designs, which do not employ these valuable features.

GLOSSARY FOR MEDIUM VOLTAGE FUSE LINKS

The following is a brief introduction to medium voltage fuse link technology. Some of the terms are also used in other areas of fuse technology.

Current rating/Current, I_n - The current of the fuse link, given in amps.

- Derating - A reference to the fact that all MV Fuse links must be derated once they are placed in a confined space, for example when mounted in switchgear. The fuse link must be derated to take into account the effect of heating on element resistance. Typically a fuse link is derated by between 5-20% depending on application.
- Test Duty, TD - A term used to refer to a specific type test within the IEC standard. Test Duty one (TD1), short-circuit test, Test Duty two (TD2), maximum arc energy test and Test Duty three (TD3), low overcurrent test.
- Minimum Breaking capacity Current, MBC, I_{3n} - The minimum current the fuse link can interrupt safely, without assistance from switchgear with instantaneous striker tripping.
- Minimum Fusing Current (MFC) - The minimum current which will cause the fuse link elements to start to melt.
- I^2T - The minimum value of pre-arching and maximum value of total clearing energy a fuse link will allow to pass through it during short circuit operation, expressed as an amount of current (I^2), multiplied by time in seconds.
- Watts loss - The power dissipation of the fuse link at a stated value of load current.
- Breaking capacity, I_1 - The maximum short circuit current the fuse link has been tested to in accordance with test Duty one (TD1), expressed in kA.
- Resistance - The resistance of the fuse link in free air (20°C), measured in mΩ.

How to order

- 1 — Voltage
 2 — Type designation letter
 3 — Barrel diameter
 4 — Barrel length
 5 — Striker information *
 6 — Tag information
 * S = Spring striker 50N
 * E = Spring striker 80N
 * N = No striker fitted
 * H or M = Pyrotechnic striker

| Ordering key | | | | | | | |
|--------------|---|---|---|---|---|---|---|
| Symbol | | | | | | | |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | Meaning |
| X | | | | | | | Voltage of the fuse link in kV |
| | X | | | | | | The type of fuse link given by a single letter |
| | | X | | | | | Diameter of the fuse link barrel (in mm) denoted by a letter |
| | | | X | | | | Length of the fuse link barrel (in mm) denoted by a letter |
| | | | | X | | | Striker information: type of striker is denoted by a letter * |
| | | | | | X | | Tag information: type denoted by a letter |
| | | | | | | X | Current rating of the fuse link given in amperes |

Example: 12TDLEJ50

Part numbers **12TDLEJ50** represents an outdoor DIN Fuse rated at **12 kV** for use in **Air (T)** with a body diameter of **50.8mm (D)**, a barrel length of **292mm (L)**, a striker to DIN 43625 **80N (E)**, a tag arrangement to **DIN 43625 (J)** and an Amp rating of **50A**.

| Ordering code information | | Type designation |
|---------------------------|----|------------------|
| Voltage of the fuse link | | 12 |
| Type of fuse link | | T |
| Body diameter | | D |
| Body length | | L |
| Type of striker | | E |
| Type of tag | | J |
| Current rating | | 50 |
| Complete part numbers | 12 | T D L E J 50 |

Introduction to DIN Medium voltage fuse links

- Fuse links comply with DIN Dimensional standard DIN 43625.
- 'F' Range, high performance full range fuse links.
- 'T' Range, high performance back-up fuse links, with striker tripping.
- 'A' Range, including high current rating back-up fuse link.
- Comply with IEC 60282-1 and VDE 0670 part 4.
- Wide variety of ratings, 3.6 kV to 36 kV.
- 'T' Range is suitable for outdoor use.
- Motor circuit fuse link option, see motor fuse links section page 24.

Eaton's Bussmann series 'T' Range

Eaton's Bussmann series 'T' range medium voltage current-limiting fuse links, to dimensional standard DIN 43625, are one of the most advanced design of medium voltage fuse links available anywhere in the world today. Developed by Eaton, they comply with the very latest requirements of IEC 60282-1, are lead and cadmium free (meeting the RoHS and WEE directives) and have been designed to meet current and future global electrical utility specifications.

The 'T' range offers time-current characteristics that are optimised to improve discrimination with upstream devices, giving fast clearance of earth faults in secondary terminal zones. The fuse links utilise Eaton's M-effect technology, ensuring low power consumption during operation, while at the same time providing temperature limitation in the event of an overload fault.

The fuse links are suitable for both indoor and outdoor applications and are fitted with a spring striker. This gives either an output force of 80N with a travel of 30 mm in the case of fuse links with part numbers sequence 'E', or in the case of part numbers referring to 'S', a spring striker with an output force of 50 N and a maximum travel of 26 mm.

Eaton's Bussmann series 'F' Range

Eaton's Bussmann series 'F' range fuse links have 'full range' clearing capability. They are designed to clear low overloads right down to the fuse links' Current in accordance with the latest IEC 60282-1 requirements. They are thus suitable for use as a sole form of protection. 'F' range time-current characteristics are especially advantageous for transformer protection applications.

Eaton's Bussmann series 'A' Range

This earlier, well proven, design has values of minimum breaking current between the 'T' and 'F' range including higher current ratings.

Applications

MV DIN Fuse links are suitable for primary side transformer protection, fuse switch combination unit, fuse bases and fuse switches.

Certification. Eaton's Bussmann series Medium Voltage (MV) DIN range of fuse links has been fully tested and certified. Interrupting performance has been certified at the world class independent test laboratories of KEMA. All other performance requirements such as temperature-rise, time-current characteristics, weather sealing etc. have been thoroughly tested to ASTA approval procedures.

All Eaton's Bussmann series medium voltage DIN Fuse links exhibit cool running and low power dissipation during normal operation in service. The use of M-effect, drastically reduces the temperature of the fuse link during operation. The larger cross section of the fuse link elements made possible by using M-effect ensures cooler running and low power dissipation under normal service conditions. This ensures maximum levels of network efficiency by reducing unnecessary power loss and minimizing switchgear wear and tear due to the fact the fuse link is running much cooler during its service life.

Cool operation. When Eaton's Bussmann series MV Fuse links operate under low fault conditions, the maximum temperature rise of the fuse link is well within the temperature limits for all switchgear due to the use of M-effect, ensuring fuse carrier contacts remain unimpaired, thereby increasing the life cycle of the substation and so reducing capital and maintenance costs.

Silver elements. All Eaton's Bussmann series back-up MV Fuse links use 99.8% pure silver in their elements, ensuring high conductivity and low power (revenue) loss, maximising network efficiency.

Reduced nuisance operation due to surge currents. The use of M-effect allows a larger element cross section for a given current rating, improving withstand capability against transient overcurrents due to transformer magnetizing inrush current, reducing mal operation. This improves system reliability reducing maintenance costs.

Low arc voltages during short-circuit operation. Eaton's Bussmann series MV Fuse links are designed to produce low levels of arc voltage, allowing fuse link to be used down to half their Voltage, so during short-circuit operation, the switchgear and cables are not unduly stressed by being exposed to high arc voltages, thereby prolonging the life of the switchgear and improving asset utilisation.

Additionally, stock holdings and part numbers can be reduced, as a 24 kV Eaton's Bussmann series MV DIN fuse link can be used on a 12 kV system. Utilities that run a mixed voltage network (say 24, 15.5, 13.8 12 and 10 kV) can standardise on one type of switchgear with one type of fuse link, reducing costs and removing the need for an additional fuse extension and inventory.

Construction. All electrical connections within the Eaton's Bussmann series MV Fuse link are made by welded or brazed joints. This firstly ensures a very mechanically robust fuse link and secondly, greatly reduces the risk of poor intermittent internal contacts, improving substation reliability.

X-Ray. All Eaton's Bussmann series MV Fuse links are X-rayed during production. Element alignment, M-effect position, etc are all checked by trained operators. This process ensures defects that would not normally be detected by purely visual or electrical based quality systems, to be captured during production.

Element design. Unlike many other medium voltage fuse link manufacturers, Eaton's Bussmann series medium voltage fuse elements employ a "neck" or 'notch' design principle as opposed to a perforated element design principle, see diagram below.

Eaton - Neck or notch design

Other Medium voltage fuse links with perforated designs

This element design insures that even the smallest degree of accidental element damage is easily detected during testing, as part of the manufacturing process thus avoids the possibility of such imperfect fuses being put into service. This is far more difficult to achieve with perforated element designs.

Lead and cadmium Free. All Eaton's Bussmann series 'T' Ranges fuse links are lead and cadmium free and meet with the latest WEEE and RoHS directives. RoHS is less than 1000 VAC.

Recycling scheme. Eatons operates a recycling scheme for all medium voltage fuse links, please contact buletechnical@eaton.com for further information.

General guide to the selection of DIN Back-up fuse links

Back-up fuse links

Selection guide using low voltage fuse links operating class gG/gL on low voltage side for individual cable exit protection see figure 1.

| Fuse links type | Transformer rating (kVA) | Transformer primary voltage | | | | | |
|--------------------|------------------------------|---|------|---|------|---|------|
| | | 10 kV | | 20 kV | | 30 kV | |
| | | Current of the medium voltage fuse link | | Current of the medium voltage fuse link | | Current of the medium voltage fuse link | |
| Back-up fuse links | 50 | 6.3 | 10 | 6.3 | 6.3 | 3.15 | 3.15 |
| | 100 | 16 | 25 | 6.3 | 10 | 6.3 | 10 |

| | 800 | 100 | 100 | - | 1000 |

Selection of these MV Fuse links has been based on the followings:

1. The fuse link should withstand transformer magnetising inrush currents, taken as 12 times full load current for 0.1 seconds.
2. The primary MV Fuse link should discriminate with the secondary LV Fuse in all cases as shown in figure 2. Where individual cable exit is used and no secondary LV Fuse is fitted, the MV Fuse should discriminate with the largest fuse fitted downstream to the secondary side of the transformer at the distribution panel.
3. The fuse link should operate within two seconds for transformers complying with IEC 60076-5 in respect of impedance, voltage and short-circuit withstand current.
4. The fuse link should operate reasonably quickly in the event of a transformer internal fault or an earth fault in the secondary terminal zone of the transformer.
5. In the case where there is no secondary fuse link for overload protection, the minimum recommended MV Fuse link rating applies to the use of fuse links in encapsulated enclosures where permissible continuous overload is generally limited to 120% of transformer full load current. However, if greater overload currents are permissible, a higher rating of fuse link may be required. Where the fuse link is used in open air or conditions of unrestricted ventilation a higher permissible overload may be possible.
6. In most cases more than one rating of MV Fuse link is recommended for a particular transformer size. Choice of fuse link will then depend on which fuse link offers the best protection; e.g., having one fuse link for several transformer sizes.

Recommendations for other voltage are available on request, please email buletechnical@eaton.com.

3.6 kV - 'A & W' Range current limiting back-up fuse links

Specifications

Description

A range of medium voltage DIN Fuse links, complete with striker, suitable for transformer protection. The fuse links can be used even when there is no secondary low voltage protection, provided they are used with fuse switches fitted with instantaneous striker tripping mechanism.

Ratings

Voltage: 3.6 kV

Current: 6.3 - 200 A

Breaking capacity: 40 - 50 kA.

Agency information

Comply with DIN Dimensional standard DIN 43625, VDE 0670 part 4 and with IEC 60282-1 (2005).

Suitable for indoor use.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

Features and benefits

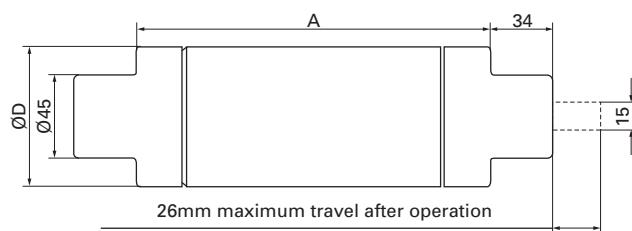

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

7.2 kV - 'T' Range current limiting back-up fuse links

Specifications

Description

A range of medium voltage DIN Fuse links complete with striker, suitable for transformer protection. The fuses can be used even when there is no secondary low voltage protection, provided they are used with fuse switches fitted with instantaneous striker tripping.

Ratings

Voltage: 3 - 7.2 kV

Current: 6.3 - 160 A

Breaking capacity: 40 kA

Agency information

Comply with DIN Dimensional standard DIN 43625, VDE 0670 part 4 and with IEC 60282-1 (2005). Suitable for indoor and outdoor use.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

12 kV - 'F' Range current limiting full range fuse links

Specifications

Description

A range of medium voltage DIN Fuse links, complete with sealed striker, suitable for transformer protection. Eaton's 'F' range provide full range protection.

Ratings

Voltage: 12 kV

Current: 6.3 - 100 A.

Breaking capacity: 50 kA.

Agency information

Comply with DIN Dimensional standard DIN 43625, VDE 0670 part 4, VDE 0670 part 402 and with IEC 60282-1 (2005). Suitable for indoor use.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

Features and benefits

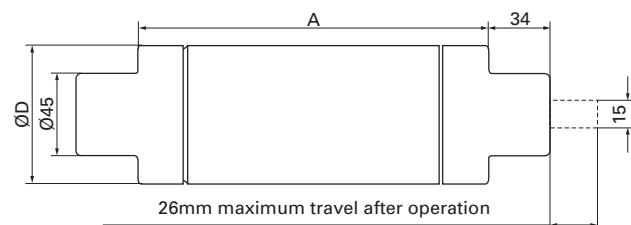

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.
- Our full range MV Fuse links can interrupt any current below the rated breaking capacity.

17.5 kV - 'A' and 'T' Range current limiting back-up range fuse links

Specifications

Description

A range of medium voltage DIN Fuse links, complete with sealed striker, suitable for transformer protection. The fuse links can be used even when there is no secondary low voltage protection, provided they are used with fuse switches fitted with instantaneous striker tripping.

Ratings

Voltage: 10 - 17.5 kV

Current: 6.3 - 125 A

Breaking capacity: 20 - 50 kA

Agency information

Comply with DIN Dimensional standard DIN 43625, VDE 0670 part 4, VDE 0670 part 402 and with IEC 60282-1 (2005).

'A' range is suitable for indoor use.

'T' range is suitable for indoor and outdoor use .

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our high voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

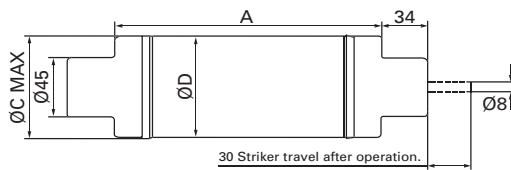

Typical applications

- Primary side transformer protection
- Used in fuse switch combination unit
- Used in fuse bases
- Used in fuse switches.

24 kV - 'F' Range current limiting full range fuse links

Specifications

Description

A range of medium voltage DIN Fuse links, complete with sealed striker, suitable for transformer protection. Eaton's 'F' range provide Full range protection.

Ratings

Voltage: 24 kV

Current: 6.3 - 45 A

Breaking capacity: 35.5 kA

Agency information

Comply with DIN Dimensional standard DIN 43625, VDE 0670 part 4, VDE 0670 part 402 and with IEC 60282-1 (2005). Suitable for indoor use.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

Features and benefits

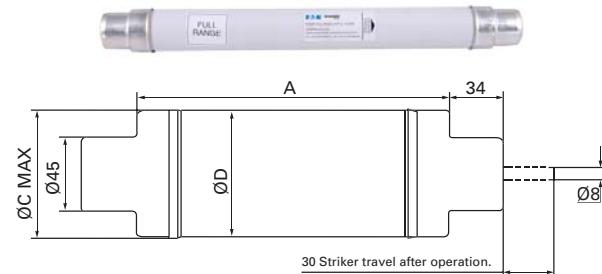

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our high voltage fuse links are X-rayed ensuring the highest possible standards are maintained.
- Our full range of MV Fuse links can interrupt any current below the rated breaking capacity.

24 kV - 'A' and 'T' Range current limiting back-up fuse links

Specifications

Description

A range of medium voltage DIN Fuse links, complete with sealed striker, suitable for transformer protection. The fuse links can be used even when there is no secondary low voltage protection, provided they are used with fuse switches fitted with instantaneous striker tripping.

Ratings

Voltage: 12 - 24 kV

Current: 6.3 - 160 A

Breaking capacity: 20 - 63 kA

Agency information

Comply with DIN Dimensional standard DIN 43625, VDE 0670 part 4, VDE 0670 part 402 and with IEC 60282-1 (2005).

'A' range is suitable for indoor use.

'T' range is suitable for indoor and outdoor use.

Introduction to medium voltage motor fuse links

- Motor fuse Links comply with IEC 60282-1, IEC 644 and BS 5907.
- Available in DIN 43625 and BS 2692 dimensions.
- Sold in a wide range of ratings from:
 - 3.6 kV - 5 to 450 A
 - 7.2 kV - 5 to 355 A
- North American dimensioned products also available, 2R to 24R ratings.

Eaton's Bussmann series motor fuse links

Eaton's Bussmann series motor fuse links are designed to meet the specific requirements necessary for motor protection. During the starting cycle of direct on-line motors, the fuse elements will reach a considerably higher temperature than during normal operation; this is due to the high amount of current the motor will draw as it starts, typically, 6 times its normal load current value. This results in expansion and contraction of the fuse elements and could cause premature operation of the fuse link. Eaton's Bussmann series motor fuse links encompass an advanced design to minimise this effect. This therefore, negates the need to over specify the fuse rating due to high values of motor starting current.

Eaton's Bussmann series fuse links operate extremely quickly under heavy fault currents, resulting from the time-current characteristic. Low power dissipation ensures low temperature rise, important in multi-tier starters for example. Switching (Arc) voltages are lower than permitted values, therefore, 5.5 kV fuse links are also suitable for 4.8 kV and 2.4 kV circuits.

Application

Fuse links provide short-circuit protection in motor circuits to both the motor starter and cables from the starter to the motor. Overload protection is provided by the motor starter, generally by an overload relay and contactor. Combination striker tripping may also form part of the associated equipment which houses the fuse links and motor starters.

Application procedure

For any motor the fuse current rating is determined by magnitude and duration of starting current, except in a few situations where the starting currents are very light.

Direct-on-line starting

In the absence of specific information, the starting current can usually be taken to be six times the motor's full load current. The starting time will depend on the type of the drive but will be approximately as follows:

- Pump motors - 6 seconds
- Mill motors - 10 to 15 seconds
- Fan motors - 60 seconds

These are average values and the appropriate figures for starting current and starting time for actual installation should be obtained wherever possible.

Multiply the starting current by 1.7 and using this value of current and the starting time, (it is recommended that a minimum time of five seconds be adopted), plot this point on the time-current characteristics of the fuse link. The correct current rating of the fuse link is then chosen as being the one immediately to the right of the point plotted. The chosen fuse link must also have a current rating of at least 1.3 times the full load current of the associated motor.

The rating chosen will be adequate for normal applications where the associated motor is not started more than twice in a given period of one hour.

For applications using more frequent starting duties, a greater derating factor must be applied as shown below:

- Maximum 2 starts per hour - Derating factor 1.7
- Maximum 4 starts per hour - Derating factor 1.9
- Maximum 8 starts per hour - Derating factor 2.1
- Maximum 16 starts per hour - Derating factor 2.4

Assisted starting

A similar method of fuse selection may be used as for direct-on-line starting (see above), but it must be noted that the normal running current of the motor is likely to be closer in value to the nominal current rating of the fuse link than for direct-on-line applications.

The rating of fuse link chosen will need to be appreciably greater than the motor running current to allow for restricted cooling inside control gear cubicles, particularly where multi-tier starters are involved. For further guidance please contact Eaton's application engineers: buletechnical@eaton.com.

Notes

For applications involving more frequent starting duties than 16 times per hour or where unusual duty cycles are involved, consult Eaton's application engineers for advice:

buletechnical@eaton.com or 00 44 (0) 1509 882 699.

Specifications

Higher ratings than those listed above can be obtained by using fuse links connected in parallel. Special fixing arrangements for connecting up to three fuse links in parallel are available. Please contact Eaton's application engineers at buletechnical@eaton.com for more details. The code designations for these arrangements are given in "How to order" page 8.

Specifications

Description

Motor fuse links providing short circuit protection in motor circuits to both the motor starter and cables from the starter to the motor.

Ratings

Voltage: 7.2 kV

Current: 25 - 315 A

Breaking capacity: 40 kA

Agency information

Comply with BS 2692-1.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

Features and benefits

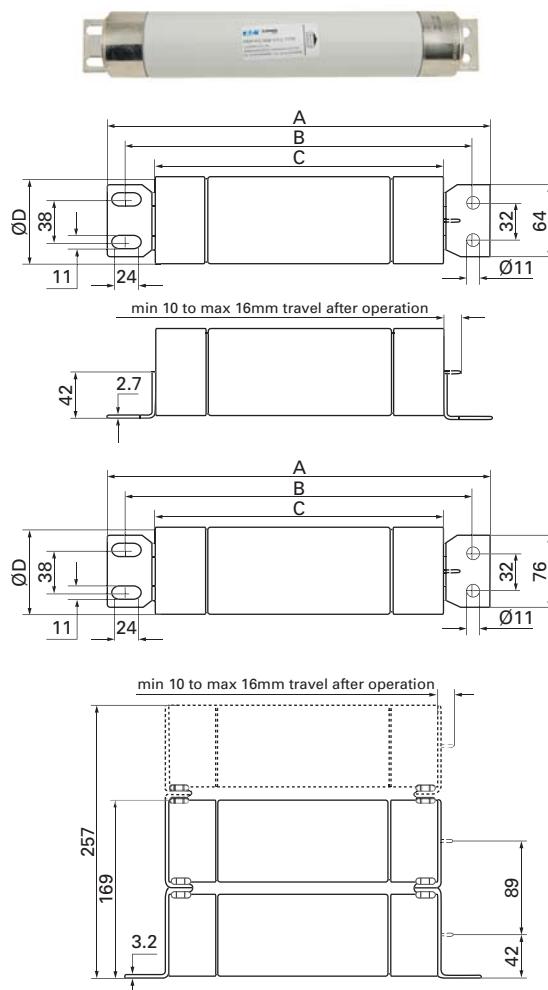

- Cool running, low watts loss and power dissipation thanks to the M-effect.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.
- Allows motor start current to pass on without degradation of fuse link.

Typical applications

- Motor protection.

Dimensions - mm

| Fuse Link Type | A | B | C | D |
|----------------|-----|-----|-----|----|
| WFnHO | 486 | 454 | 403 | 76 |
| WKnHO | 486 | 454 | 403 | 76 |

Triple barrel fuse link (3rd barrel shown dotted) with 03 tags.
Double barrel fuse link with 02 tags shown in full line.

12 kV - Motor fuse links to British standard dimensions

Specifications

Description

Motor fuse links providing short circuit protection in motor circuits to both the motor starter and cables from the starter to the motor.

Ratings

Voltage: 12 kV

Current: 250 - 350 A

Breaking capacity: 56 kA

Agency information

Comply with BS 2692-1.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

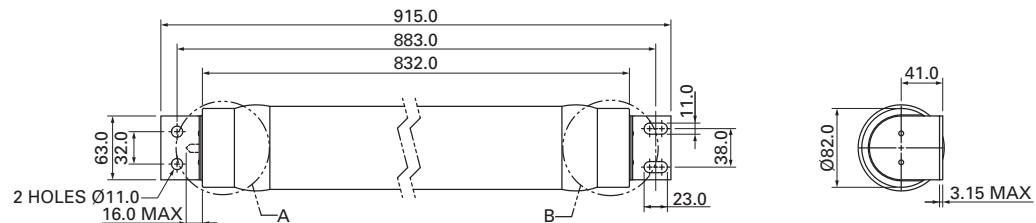

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.
- Allows motor start current to pass on without degradation of fuse link.

Typical applications

- Motor protection

Dimensions - mm

Part numbers and technical data

| K81ERX350 | 350 | 56 kA | 1000 | 850 | 4500 |

* Lower ratings available 32, 40, 50, 63, 75, 100, 125, 160 and 200 A. Please contact our technical department for further information: buletechnical@eaton.com or 00 44 1509 882 699.

3.6 kV - Motor fuse links to DIN Standard dimensions

Specifications

Description

Motor fuse links providing short circuit protection in motor circuits to both the motor starter and cables from the starter to the motor.

Ratings

Voltage: 3.6 kV

Current: 50 - 400 A

Breaking capacity: 50 kA

Agency information

Comply with IEC 60282-1, VDE 0670 part 4 and DIN Dimensional standard DIN 43625.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

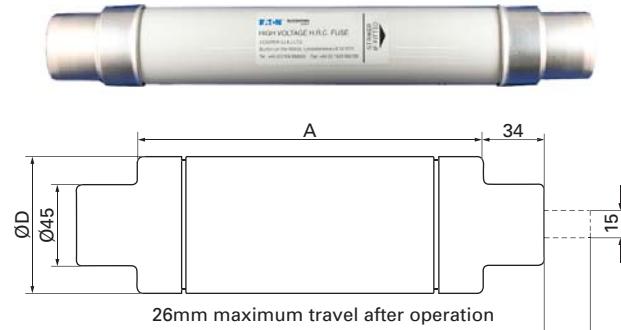

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.
- Allows motor start current to pass on without degradation of fuse link.

Part numbers and technical data

Typical applications

- Motor protection.

Specifications

Description

R-rated medium voltage current limiting fuse links for motor protection.

Ratings

Voltage: 2.75 kV

Current: 2 - 24 R

Breaking capacity: 60 kA

Agency information

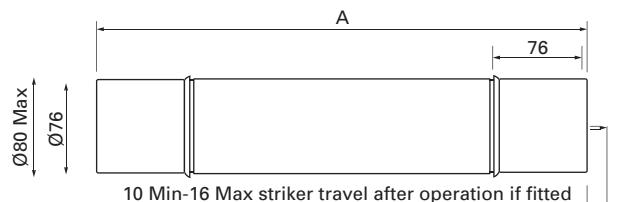

IEEE standards.

Features and benefits

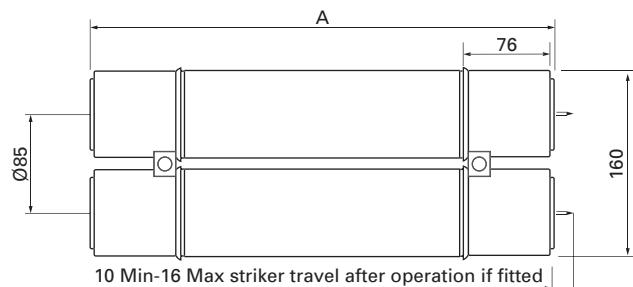

- Cool running, low watts loss and power dissipation thanks to the M-effect.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.
- Allows motor start current to pass on without degradation of fuse link.

Typical applications

- Motor protection.

5.5 kV - Motor fuse links to USA Dimensions

Specifications

Description

R-rated medium voltage current limiting fuse links for motor protection.

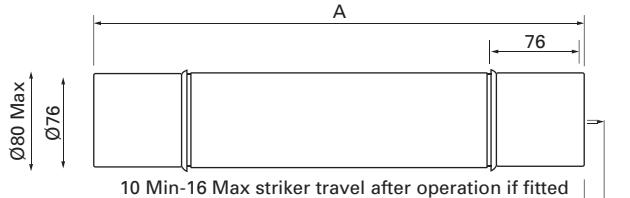

Ratings

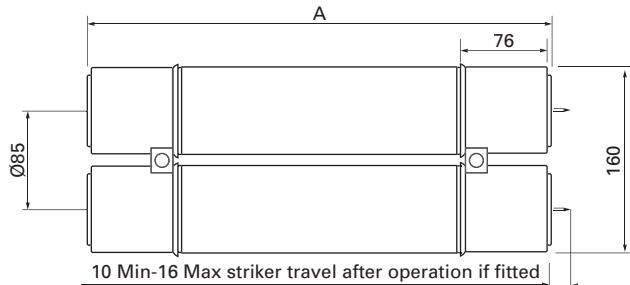

Voltage: 5.5 kV

Current: 2 - 24 R

Breaking capacity: 60 kA

A Tags (ferrule)

K Tags (double barrel fuse links)

Agency information

IEEE standards.

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

Typical applications

- Motor protection.

Introduction to medium voltage and auxiliary transformer fuse links

- British standard voltage and auxiliary transformer (VT) fuse links.
- A range of voltage transformer primary fuse links to BS 2692-1 and IEC 60282-1.
- Wide range of ratings from 1 kV to 36 kV.
- 3.15 Amp industry standard current ratings.
- CAV range with ratings from 3.6 kV to 38 kV.

Eaton's Bussmann series voltage and auxiliary transformer fuse links

Eaton manufactures a wide range of voltage transformer (VT) fuse links. In North America they are referred to as 'potential transformer fuse links'. These fuse links are designed for use in the primary side of voltage transformers to provide system isolation in the event of faults occurring in the transformer circuit.

Voltage transformer fuse links have a preferred current rating of 3.15A. Experience has shown that there is a risk of spurious operation by transient overcurrents where lower current ratings are used. In addition, in order to minimise the risk of deterioration of the fine fuse elements caused by corona, it is desirable to mount the fuse links so that the earthed metal is not in the immediate vicinity of the part of the barrel between the ferrules.

Higher current and 'E' ratings are available for special applications, including auxiliary transformers.

A range of VT fuse links with a breaking capacity of 200 kA for use at the output terminals of large turbo alternators can also be ordered. For further information, please contact Eaton's application engineers: buletechnical@eaton.com.

Types prefixed 'A' or 'N' are suitable for use indoors in air only. Types prefixed 'O' may be used under oil.

Application

Small rated fuse links for protection of voltage and auxiliary transformers. Back-up protection up to 3.15 A and voltages from 1.1 kV to 36 kV.

Specifications

Description

Voltage transformer fuse links. suitable for the protection of auxiliary transformers.

Ratings

Voltage: 1.1 kV

Current: 2 - 6.3 A

Breaking capacity: 50 kA

Agency information

Comply with BS 2692-1 and IEC 60282-1.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

3.6 kV - Voltage and auxiliary transformer fuse links

Specifications

Description

Voltage transformer fuse links. suitable for the protection of auxiliary transformers.

Ratings

Voltage: 3.6 kV

Current: 3.15 - 10A

Breaking capacity: 50 kA

Agency information

Comply with BS 2692-1 and IEC 60282-1.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

24 kV - Voltage and auxiliary transformer fuse links

Specifications

Description

Voltage transformer fuse links. suitable for the protection of auxiliary transformers.

Ratings

Voltage: 24 kV

Current: 3.15A

Breaking capacity: 25 kA

Agency information

Comply with BS 2692-1 and IEC 60282-1.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

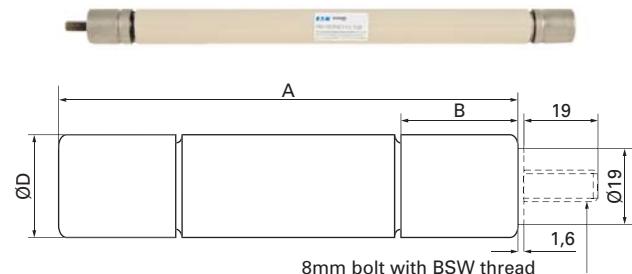

Part numbers and technical data

| Part numbers | Current I_n (A) | Breaking capacity I_b (kA) | Cold resistance mΩ | Joule integral (I^2t) | | | | |
|--------------|-------------------|------------------------------|--------------------|---------------------------|-------------------|-----------|-------------|-----------|
| | | | | Minimum pre-arcng | Maximum operating | Length mm | Diameter mm | Weight kg |
| 24ABGN*3.15 | 3.15 | 25 | 2 | 6.3×10^0 | 4×10^1 | 359 | 25.4 | 0.43 |
| 24OBGN*3.15 | 3.15 | 25 | 2 | 6.3×10^0 | 4×10^1 | 359 | 25.4 | 0.43 |

* The last letter of the ordering code on these items is normally either "A" or "22", please refer to how to order page 8.

Typical applications

- Protection of auxiliary transformers.

Ferrule fuse links tag type 'A' shown in full lines and '22': tag shown in dotted lines

Dimensions - mm

| Fuse link reference | A (mm) | B (mm) | D (mm) |

3.6 kV - Voltage and auxiliary transformer type CAV Fuse links

Specifications

Description

Voltage transformer fuse links. suitable for the protection of auxiliary transformers.

Ratings

Voltage: 3.6 kV

Current: 2A

Breaking capacity: 50 kA

Agency information

Comply with IEC 60282-1.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

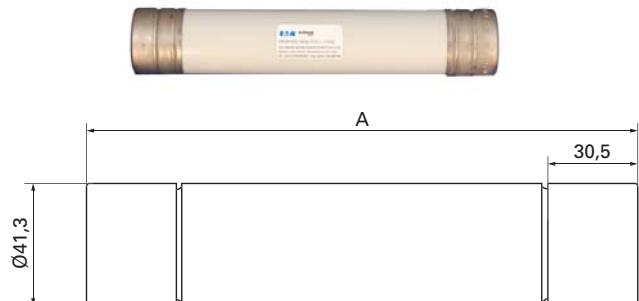

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

Part numbers and technical data

Typical applications

- Protection of auxiliary transformers.

Dimensions - mm

| Fuse link reference | A (mm) |
|---------------------|--------|
| 3.6CAV | 220 |

5.5 kV - Voltage and auxiliary transformer type CAV Fuse links

Specifications

Description

Voltage transformer fuse links. suitable for the protection of auxiliary transformers.

Ratings

Voltage: 5.5 kV

Current: 0.5 - 15A

Breaking capacity: 50 kA

Agency information

Comply with IEC 60282-1.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

Part numbers and technical data

| Part numbers | Current I_p (A) | Breaking capacity I_b (kA) | Cold resistance mΩ | Joule integral (I^2t) | | | | |
|--------------|-------------------|------------------------------|--------------------|---------------------------|-------------------|-----------|-------------|-----------|
| | | | | Minimum Pre-arcing | Maximum operating | Length mm | Diameter mm | Weight kg |
| 5.5CAVH0.5E | 0.5 | 50 | 12.1 | 1.4×10^1 | 9×10^1 | 187 | 41.3 | 0.6 |
| 5.5CAVH1E | 1 | 50 | 12.1 | 1.4×10^1 | 9×10^1 | 187 | 41.3 | 0.6 |

CAV fuse links are suitable for indoor use in air only.

Type CAVH fuse links are fitted with striker pins which may be used for indication purposes.

Typical applications

- Protection of auxiliary transformers.

Shown with striker fitted.

Dimensions - mm

| Fuse link reference | A (mm) |
|---------------------|--------|
| CAV and CAVH | 187 |

7.2 kV - Voltage and auxiliary transformer type CAV Fuse links

Specifications

Description

Voltage transformer fuse links. suitable for the protection of auxiliary transformers.

Ratings

Voltage: 7.2 kV

Current: 2 - 10A

Breaking capacity: 40 kA

Agency information

Comply with IEC 60282-1.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

Features and benefits

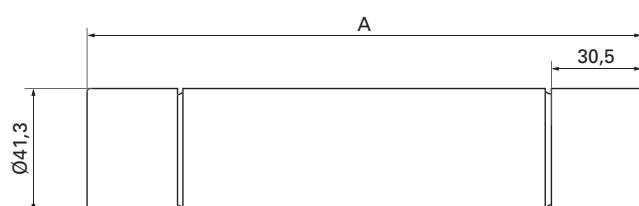

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

Typical applications

- Protection of auxiliary transformers.

Dimensions - mm

| Fuse link reference | A (mm) |
|---------------------|--------|
| CAV | 220 |

12 kV - Voltage and auxiliary transformer type CAV Fuse links

Specifications

Description

Voltage transformer fuse links. suitable for the protection of auxiliary transformers.

Ratings

Voltage: 12 kV

Current: 2A

Breaking capacity: 40 kA

Agency information

Comply with IEC 60282-1.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

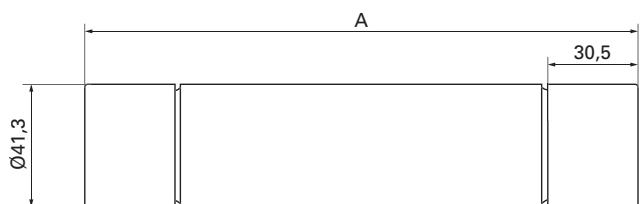

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

15.5 kV - Voltage and auxiliary transformer type CAV Fuse links

Specifications

Description

Voltage transformer fuse links. suitable for the protection of auxiliary transformers.

Ratings

Voltage: 15.5 kV

Current: 0.5 - 7 A

Breaking capacity: 80 kA

Agency information

Comply with IEC 60282-1.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

Part numbers and technical data

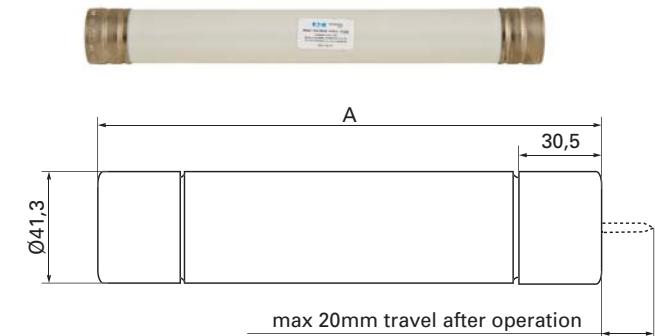

| Part numbers | Current I_n (A) | Breaking capacity I_1 (kA) | Cold resistance mΩ | Joule integral (I^2t) | | | | |

CAV fuse links are suitable for indoor use in air only.

Type CAVH fuse links are fitted with striker pins which may be used for indication purposes.

Typical applications

- Protection of auxiliary transformers.

Dimensions - mm

| Fuse link reference | A (mm) |
|---------------------|--------|
| CAV and CAVH | 327 |

17.5 kV - Voltage and auxiliary transformer type CAV fuse links

Specifications

Description

Voltage transformer fuse links. suitable for the protection of auxiliary transformers.

Ratings

Voltage: 17.5 kV

Current: 2 - 10 A

Breaking capacity: 40 kA

Agency information

Comply with IEC 60282-1.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

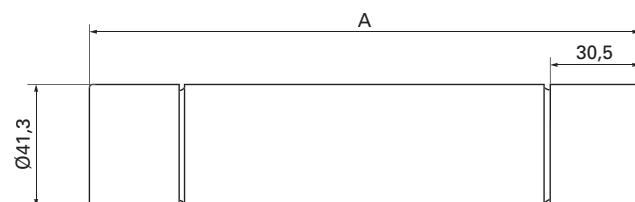

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

36 kV - Voltage transformer and auxiliary type CAV Fuse links

Specifications

Description

Voltage transformer fuse links. suitable for the protection of auxiliary transformers.

Ratings

Voltage: 36 kV

Current: 2 - 4 A

Breaking capacity: 40 kA

Agency information

Comply with IEC 60282-1.

Time-current curves and cut-off curves

See list page 117 and data on USB at the back of the catalogue.

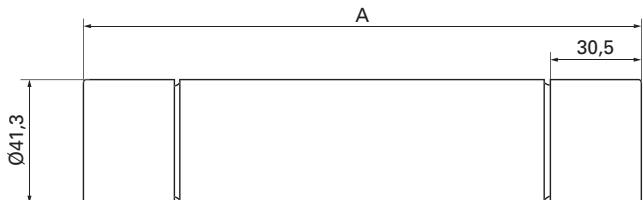

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

Part numbers and technical data

Typical applications

- Protection of auxiliary transformers.

Dimensions - mm

| Fuse link reference | A (mm) |
|---------------------|--------|
| CAV | 440 |

| Part numbers | Current I_p (A) | Breaking capacity I_b (kA) | Cold resistance mΩ | Joule integral (I^2t) | | | | |

| 3.6 kV | 55 |
| 7.2 kV | 56 |
| 12 kV | 57 |
| 15.5 kV | 58 |
| 17.5 kV | 59 |
| 24 kV | 60 |

Introduction to current limiting fuse links for use in oil switchgear

- Fuse Links comply with IEC 60282-1, BS 2692-1 and ESI standard 12-8.
- 7.2 and 12 kV Fuse links tested at highest system voltage and approved by the UK Electricity Association approvals panel.
- Voltage ranges from 3.6 to 24 kV.
- Fitted with powerful pyrotechnic striker pin.

Eaton's Bussmann series under oil fuse links

Eaton's Bussmann series oil tight fuse links are designed for use in oil filled switchgear. This type was pioneered in the UK. Eaton has been in continuous manufacture for almost 40 years, being by far the most widely used device of its kind in the world. Over 1,000,000 Eaton's Bussmann series branded fuse links have been put into service without a single reported case of oil ingress. A unique triple seal system ensures against long term seal deterioration. Low power dissipation ensures long running in oil filled switchgear.

Application

Oil medium voltage fuse links are suitable for primary side transformer protection and oil filled switch combination unit.

The range is not suitable for use inside oil filled transformer tanks where high oil temperatures may be expected.

Application procedure

For any transformer the fuse current rating is determined by magnitude and duration of inrush current.

General Guide to the Selection of Oil Tight Fuse Links for Use in Primary Circuit of Three Phase Transformers.

Selection of these fuse links has been based on a compromise between the following:

- 1 - Withstand against magnetising inrush current is taken as 12 times full-load current for 0.1 second.
- 2 - Withstand against 150% permissible overload current. Recommendations marked with the following:
 - * Limited to permissible overload of 130%.
 - ** Permits use of a 12 kV OHFMA 80A fuse link with a 1000 kVA transformer where permissible overload does not exceed 130%.
- 3 - For 6.6 kV systems, 12 kV fuse links are recommended where possible in the interests of standardisation.
- 4 - Wherever possible, 254mm long fuse links are offered rather than equivalent 359mm types.
- 5 - The above recommendations are not generally applicable to transformers feeding motor circuits with starting currents in excess of the transformer full load current. In this event please consult Eaton's Bussmann series application engineers: buletechnical@eaton.com.

Specifications

Description

Oil tight fuse links suitable for the protection of primary side transformer and oil filled fuse switch combination unit.

Ratings

Voltage: 3.6 kV

Current: 6.3 - 250 A

Breaking capacity: 50 kA

Agency information

Comply with IEC 60282-1, BS 2692-1 and ESI standard 12-8.

Time-current curves and cut-off curves

See list page 118 and data on USB at the back of the catalogue.

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

Typical applications

- Primary side transformer protection.
- Oil filled fuse switch combination unit.

The range is not suitable for use inside oil filled transformer tanks where high oil temperatures may be expected.

7.2 kV - British standard oil tight fuse links

Specifications

Description

Oil tight fuse links suitable for the protection of primary side transformer and oil filled fuse switch combination unit.

Ratings

Voltage: 7.2 kV

Current: 80 - 160 A

Breaking capacity: 45 kA

Agency information

Comply with IEC 60282-1, BS 2692-1 and ESI standard 12-8.

Time-current curves and cut-off curves

See list page 118 and data on USB at the back of the catalogue.

Features and benefits

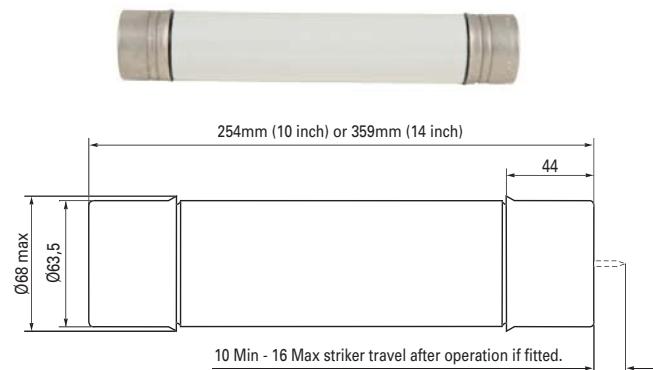

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

Part numbers and technical data

Typical applications

- Primary side transformer protection.
- Oil filled fuse switch combination unit.

The range is not suitable for use inside oil filled transformer tanks where high oil temperatures may be expected.

24 kV - British standard oil tight fuse links

Specifications

Description

Oil tight fuse links suitable for the protection of primary side transformer and oil filled fuse switch combination unit.

Ratings

Voltage: 24 kV

Current: 6.3 - 50 A

Breaking capacity: 25 kA

Agency information

Comply with IEC 60282-1, BS 2692-1 and ESI standard 12-8.

Time-current curves and cut-off curves

See list page 118 and data on USB at the back of the catalogue.

Features and benefits

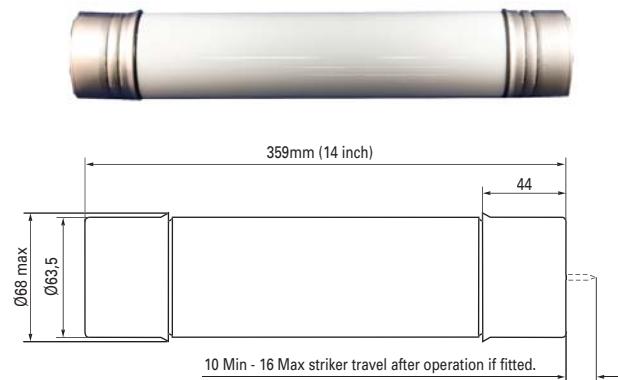

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

Part numbers and technical data

Typical applications

- Primary side transformer protection.
- Oil filled fuse switch combination unit.

The range is not suitable for use inside oil filled transformer tanks where high oil temperatures may be expected.

Medium voltage British standard air fuse links

Introduction to current limiting fuse links for use in air..... **62**

British standard

| | |
|---------------|-----------|
| 3.6 kV | 63 |
| 7.2 kV | 65 |
| 12 kV | 67 |
| 15.5 kV | 69 |
| 24 kV | 70 |
| 36 kV | 71 |
| 72.5 kV | 72 |

Introduction to current limiting fuse links for use in air

- Medium voltage fuse links for use in air, comply with BS 2962-1 dimensions.
- Available in voltage from 3.6 kV to 72.5 kV.
- Full range performance option available at 12 kV and 24 kV.
- Wide variety of fixing arrangements available.
- Powerful pyrotechnic striker fitted.
- E-rated North American dimension products also available.
- Suitable for indoor and outdoor use.

Eaton's Bussmann series fuse links for use in Air

Eaton's Bussmann series fuse links for use in air are available in British Standard form, BS 2692, Part 1 1975. A number of options are available, including Full range capability, and alternative fixing arrangements such as different types of tags, studs and collars etc. Details are available on application. Higher current ratings can be obtained by using fuse links in parallel and special fixing arrangements are available for this purpose.

Eaton's Bussmann series fuse links - USA Dimensions

A comprehensive range of 'E' rated North American dimension fuse links for industrial applications is also available. These are the latest technology Full range fuse links in USA Industrial Standard 2 inch and 3 inch diameter ferrule style. Extended ratings in double barrel assemblies; striker, indicator and tag versions are also available, see pages 74 to 88.

Application

Air fuse links are suitable for primary side transformer protection, fuse switch combination unit, fuse bases and fuse switches.

Selection of fuse these links has been based on a compromise between the following:

- 1 - The fuse links should withstand transformer magnetising inrush currents, taken as 12 times full load current for 0.1 seconds.
- 2 - The fuse links should discriminate with the highest rating of secondary fuse links.
- 3 - The fuse links should withstand periodic overcurrents of up to 150% of transformer fuse load current.
- 4 - The fuse links should operate reasonably quickly in the event of a transformer inter-turn fault or a fault in the secondary terminal zone of the transformer.

Notes

- a) The above recommendations are not generally applicable to transformers feeding motor circuits with starting currents in excess of the Current fuse. In this event, please consult Eaton application engineers.
- b) For 6.6 kV transformers, 12 kV fuse links are recommended, where the required current rating is available.
* Where the transformer is not subjected to periodic overcurrents, a lower fuse rating may be suitable, fuse ratings marked with **, are only suitable for use with the transformer sizes quoted, where significant over loading does not occur.

Fuse links for use in transformers with primary voltages of 3.3, 22 and 33 kV are available, please consult Eaton application engineers for further details buletechnical@eaton.com.

General guide to the selection of air fuse links for use in the primary circuit of three phase transformers

| Transformer Priority Voltage | | | | | | | | | | |
|------------------------------|--------------|-------------|--------------|--------------|-------------|--------------|--------------|--------------|-------------|--------------|
| Transformer kVA | Product code | 6.6 kV | | 11 kV | | 13.8 kV | | Product code | Current (A) | Voltage (kV) |
| | | Current (A) | Voltage (kV) | Product code | Current (A) | Voltage (kV) | Product code | | | |
| 200 | BDG | 31.5 | 12 | BDG | 20 | 12 | BDG | 20 | 15.5 | |

Specifications

Description

Air fuse links for the protection of primary side transformer. They are also used in fuse switch combination unit, fuse bases and fuse switches

Ratings

Voltage: 3.6 kV

Current: 6.3 - 100 A

Breaking capacity: 25 - 40 kA

Agency information

Comply with BS 2962-1 dimensions.

Time-current curves and cut-off curves

See list page 118 and data on USB at the back of the catalogue.

Features and benefits

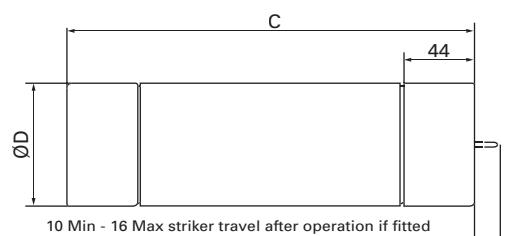

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

Typical applications

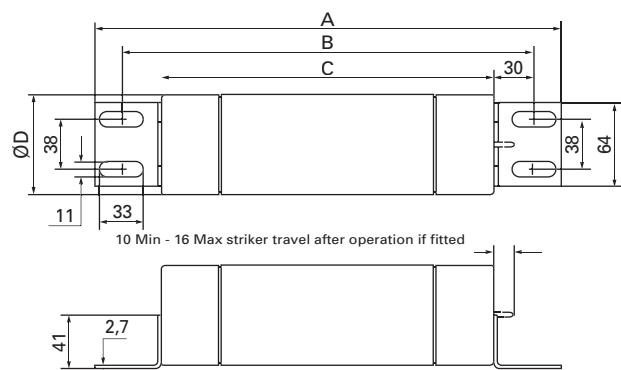

- Primary side transformer protection.
- Used in fuse switch combination unit.
- Used in fuse bases.
- Used in fuse switches.

There are a wide variety of end terminations available, the most popular types, some of which have dimensional references to BS2692: Part 1, are:

- ADFHC: C Special offset tags, two hole fixings for Brush fuse switch equipment , BS Ref TA3
- ADFHF: F Offset tags two bolt fixing
- AFFHD: D Special offset tags, two hole fixings for Brush fuse switch equipment , BS Ref TA3
- AFFHF: F Offset tags two bolt fixing
- AKGHD: D Special offset tags, two hole fixings for Brush fuse switch equipment , BS Ref TA3
- AKGHA: A No tags - Ferrule - BS Ref. FA3 ADIHA / BS Ref FA4 AFIHA / BS Ref FA5 - AFKHA
- AKGHF: F Offset tags two bolt fixing

- BDGH**C: C** Special offset tags, two hole fixings for Brush fuse switch equipment , BS Ref TA3
- BDGH**A: A** No tags - Ferrule - BS Ref. FA3 ADIHA / BS Ref FA4 AFIHA / BS Ref FA5 - AFKHA
- BDGH**F: F** Offset tags two bolt fixing
- BFGH**A: A** No tags - Ferrule - BS Ref. FA3 ADIHA / BS Ref FA4 AFIHA / BS Ref FA5 - AFKHA
- BFGH**F: F** Offset tags two bolt fixing
- FFGN**49: 49** Centre tags, single bolt fixing for use in Fused End Boxes

See opposite page for outline drawings and dimensions.

Other tag variants available please consult Eaton's application engineers: buletechnical@eaton.com

Specifications

Description

Air fuse links for the protection of primary side transformer. They are also used in fuse switch combination unit, fuse bases and fuse switches

Ratings

Voltage: 15.5 kV

Current: 6.3 - 85 A

Breaking capacity: 20 - 40 kA

Agency information

Comply with BS 2962-1 dimensions.

Time-current curves and cut-off curves

See list page 118 and data on USB at the back of the catalogue.

Features and benefits

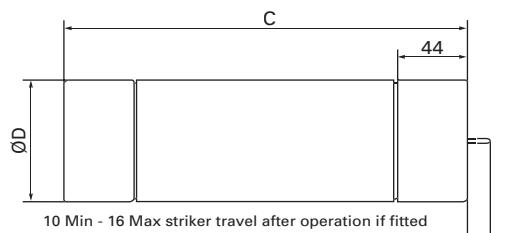

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

Typical applications

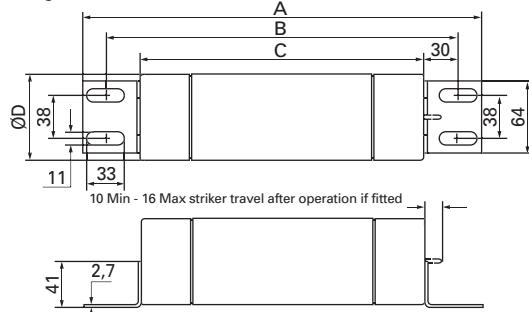

- Primary side transformer protection.
- Used in fuse switch combination unit, fuse bases and fuse switches.

72.5 kV - British standard air fuse links

Specifications

Description

Air fuse links for the protection of primary side transformer. They are also used in fuse switch combination unit, fuse bases and fuse switches

Ratings

Voltage: 72.5 kV

Current: 3.15 - 40 A

Breaking capacity: 12 kA

Agency information

Comply with BS 2962-1 dimensions.

Time-current curves and cut-off curves

See list page 118 and data on USB at the back of the catalogue.

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- Silver elements ensuring high conductivity and low power (revenue) loss.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

5.5 kV E-Rated fuse links for transformers and feeder protection

Specifications

Description

E-Rated power fuse links having Full range clearing capability for medium voltage transformer circuit protection.

Ratings

Voltage: 5.5 kV

Current: 5 - 450E

IR: 50 kA

Time-current curves and cut-off curves

See list page 118 and data on USB at the back of the catalogue.

Dimensions

See outline drawings below and part numbers details page 76

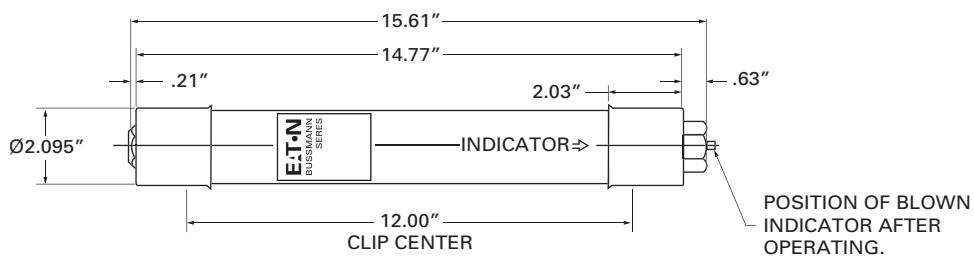

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

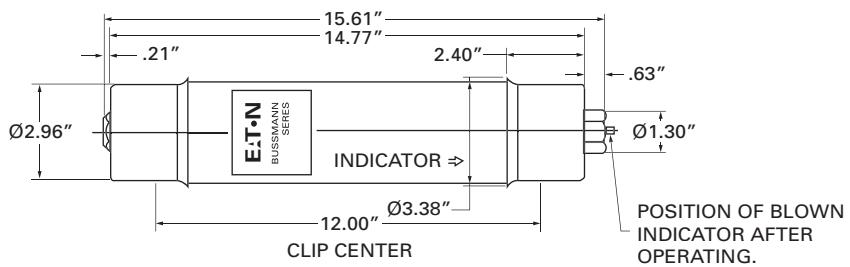

Typical applications

- Medium voltage transformer primary protection.
- Medium voltage feeder circuit protection.

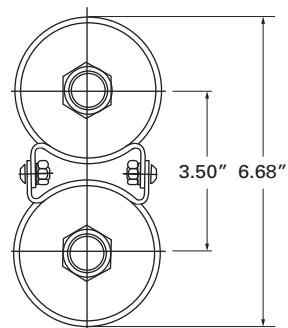

MV055F1CAX

* These ratings are classed as Back-up fuse links

8.25 kV E-Rated fuse links for transformers and feeder protection

Specifications

Description

E-Rated power fuse links having full range clearing capability for medium voltage transformer circuit protection.

Ratings

Voltage: 8.25 kV

Current: 80 - 200A, 20 - 150E

IR: 50 kA

Time-current curves and cut-off curves

See list page 118 and data on USB at the back of the catalogue.

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

Typical applications

- Medium voltage transformer primary protection.
- Medium voltage feeder circuit protection.

15.5 kV E-Rated fuse links for transformers and feeder protection

Specifications

Description

E-Rated power fuse links having full range clearing capability for medium voltage transformer circuit protection.

Ratings

Voltage: 15.5 kV

Current: 5 - 200E

IR: 50 kA

Time-current curves and cut-off curves

See list page 118 and data on USB at the back of the catalogue.

Features and benefits

- Cool running, low watts loss and power dissipation thanks to the M-effect ensuring high levels of substation utilisation.
- 100% X-ray, all our medium voltage fuse links are X-rayed ensuring the highest possible standards are maintained.

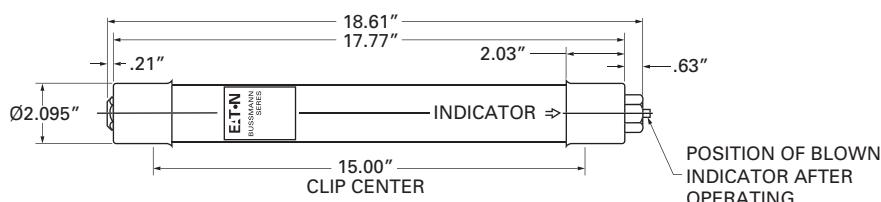

Typical applications

- Medium voltage transformer primary protection.
- Medium voltage feeder circuit protection.

JCX, JCY, JCU, JCZ and JDZ E-Rated fuse links for potential and small power transformers

Specifications

Description

Indoor/enclosure E-rated medium voltage, current-limiting fuse links for potential & small power transformers with blown fuse link indication.

Ratings

Voltage: 2.4 - 8.3 kV

Current: ½ - 750A

Breaking capacity: 40 - 63 kA Sym.

Features and benefits

- Physically dimensioned for retrofitting in existing hardware.
- Open fuse indicator for ease in troubleshooting.
- Full range ANSI classification.

Typical applications

- Medium voltage transformer primary protection.
- Medium voltage feeder circuit protection.
- Medium voltage switches.
- Medium voltage metal-enclosed switchgear.

JCD, JCW, JCE, JCQ JCI, JCT E-Rated fuse links for potential and small power transformers

Specifications

Description

Indicating and non-indicating E-Rated medium voltage, current limiting fuse links for potential and small power transformers.

Ratings

Voltage: 2.4 - 15.5 kV

Current: ½ - 10A

Breaking capacity: 25 - 80 kA Sym.

Typical applications

- Primary protection of medium voltage potential transformers.

Data Sheet 6002

E-Rated fuse links for potential and small power transformers

Specifications

Description

Indicating and non-indicating E-Rated medium voltage, current-limiting fuses for potential and small power transformers.

Ratings

Voltage: 5 - 38 kV (See Part numbers table for details)

Current: 0.5 - 7E

Breaking capacity: 40 - 80 kA.

Time-current curves and cut-off curves

See list page 118 and data on USB at the back of the catalogue.

Typical applications

- Primary protection of medium voltage potential transformers.

Part numbers and technical data

| Part numbers | Voltage | Current | Interrupting capacity sym kA | Number of barrels | Length inches (mm) | Diameter inches (mm) | Clipping Centres inches (mm) |

ECL055 Specifications

Description

E-Rated medium voltage, current-limiting fuses for transformer and feeder protection.

Ratings

Voltage: 5.5 kV E-Rated

Current: 10 - 900 A

Breaking capacity: 63 kA Sym. Max.

Agency information

Meets E requirements per ANSI C37.46, meets general purpose requirements per ANSI C37.40.

Typical applications

- 5 kV Transformer primary protection.
- 5 kV Feeder circuit protection.
- 5 kV Voltage switches.
- 5 kV Metal-enclosed switchgear.

Part numbers and technical data

| Part numbers | Voltage (kV) | Current (E) | Breaking capacity (Sym) kA | Number of barrels |
|--------------|--------------|-------------|----------------------------|-------------------|
| ECL055-10E | 5.5 | 10 | 63 | 1 |
| ECL055-15E | 5.5 | 15 | 63 | 1 |

Part numbers construction (example)

| Part numbers | Voltage rating | Ampere rating |
|--------------|--------------------|---------------|
| ECL | 055 (055 = 5.5 kV) | 300E |

E-Rated fuse links: 8.3 kV CL-14

ECL083 Specifications

Description

E-Rated medium voltage, current-limiting fuses for transformer and feeder protection.

Ratings

Voltage: 8.3 kV E-Rated

Current: 65 - 350 A

Breaking capacity: 50 kA

Agency information

Meets E requirements per ANSI C37.46, meets general purpose requirements per ANSI C37.40.

Typical applications

- 8.3 kV Transformer primary protection.
- 8.3 kV Feeder circuit protection.
- 8.3 kV Voltage switches.
- 8.3 kV Metal-enclosed switchgear.

Part numbers and technical data

| Part numbers | Voltage (kV) | Current (E) | Breaking capacity (Sym) kA | Number of barrels |
|--------------|--------------|-------------|----------------------------|-------------------|
| ECL083-65E | 8.3 | 65 | 50 | 1 |
| ECL083-80E | 8.3 | 80 | 50 | 1 |

| ECL083-300E | 8.3 | 300 | 50 | 2 |
| ECL083-350E | 8.3 | 350 | 50 | 2 |

Part numbers construction (example)

| Part numbers | Voltage rating | Ampere rating |
|--------------|---------------------|---------------|
| ECL | 083 (0.83 = 8.3 kV) | 300E |

ECL155 Specifications

Description

E-Rated medium voltage, current-limiting fuses for transformer and feeder protection.

Ratings

Voltage: 15.5 kV E-Rated

Current: 10 - 300A

Breaking capacity:

63 kA Sym. (10-200 A)

50 kA Sym. (250-300 A)

Typical applications

- 15 kV Transformer primary protection.
- 15 kV Feeder circuit protection.
- 15 kV Voltage switches.
- 15 kV Metal-enclosed switchgear.

Agency information

Meets E requirements per ANSI C37.46, meets general purpose requirements per ANSI C37.40.

Part numbers and technical data

| Part numbers | Voltage (kV) | Current (E) | Breaking capacity (Sym) kA | Number of barrels |

R-Rated fuse links for motor circuit protection

Specifications

Description

Indoor/enclosure R-Rated medium voltage, current-limiting fuse links for motor circuit protection.

Ratings

Voltage: 2.4 - 7.2 kV

Current: 25 - 450A

Breaking capacity: 50 kA Sym

Agency information

UL recognized: 2540Vac — JCK, JCK-A, 5080Vac — JCL, JCL-A, UL recognized (Guide #MSSS2, File #E96676).

Typical applications

- Medium voltage motor controllers.

- VT Fuse Clips for 25.4mm diameter.
- DIN standard Clips for 'F' and 'T' range fuse links.
- BS Mounting Clips suitable for 50.8mm and 76.2mm Oil, Air, and Motor Fuse Links up to 200A.

Eaton's Bussmann series fuse clips

To complement the range of tag fixings offered by Eaton, a range of fuse clips are available. These are suitable for use with British Standard, DIN Dimensioned and VT ferrule style fuse links. The BS and DIN Clips are rated up to 200 Amps. They are designed to be fitted onto insulated studs or directly onto a busbar.

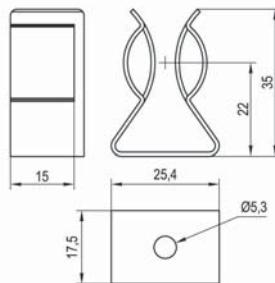

| Fuse clips | Clip reference |
|---|--------------------|
| DIN fuse links to 43625 | 270303 or A3354745 |
| Voltage transformer and auxiliary type fuse links | A3354705 |
| British standard fuse links | |
| 50.8mm (2") diameter | A3354710 |
| 63.5mm (2") diameter | A3354720 |
| 76.2mm (2") diameter | A3354730 |

Clips for 25.4mm VT Fuse links

Material

Nickel silver alloy.

Order as part number: A3354705#

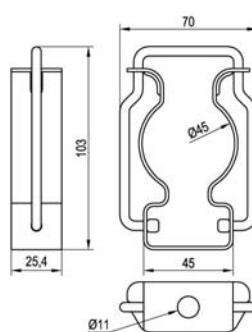

Clips for DIN Fuse links

Material

Nickel-plated copper

Order as part number: 270303

Suitable for use with Eaton's Bussmann series DIN fuse links. Also suitable for use with other Eaton's Bussmann series fuse links having type 'J' end tags, to DIN 43625, with maximum current rating of 200 Amps

Clips for British standard and DIN Style fuse links

Material

Nickel-plated copper

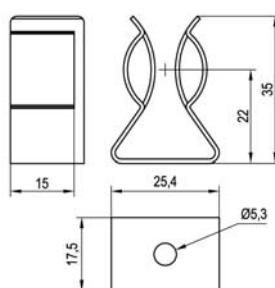

Order as part numbers:

A3354745 for 45mm diameter

A3354710 for 50.8mm diameter

A3354720 for 63.5mm diameter

A3354730 for 76.2mm diameter

Explosion fuse links for use in high voltage distribution cut-outs

- Wide range of options available from 15 kV to 72 kV in ANSI T & K characteristics.
- Extra rapid option also available.

Eaton's Bussmann series explosion fuse links

Eaton's Bussmann series explosion fuse links have been widely used throughout the world for over 40 years. They have in that time built up a formidable reputation and consistency of performance.

Eaton's Bussmann series explosion fuse links are designed to be interchangeable with other types of manufacturers cut-out units and are available in several patterns.

Application

Explosion fuse links current ratings should be selected on the basis of maximum expected transient no damage currents rather than on full load current. In addition, the selection of higher current ratings will reduce the possibility of supply interruption due to transient surges such as those due to

lightning strikes (for information on our Surge Protection Device SPD, please contact buletechnical@eaton.com).

Links should be handled with a reasonable degree of care when installing. Excessively rough handling may damage the element.

It is normal, under certain fault conditions, for arc extinguishing material and/or metal particles to be expelled from the fuse assembly. It is therefore recommended that reasonable precautions be taken to prevent the installation being approached by unauthorised persons.

How to order – Parts referencing system

| Voltage (kV) | 1st Letter Type of current characteristics | 2nd letter Type of termination | Current (A) |
|--------------|---|---|--|
| 15 | T = complies with ANSI C 37-42 requirements for slow acting T characteristics. | B = a fixed NEMA button head link. | 1 to 6, 7.5, 8, 10, 12, 15, 20, |
| 25 | | U = a universal link, with double tail and slip off NEMA button head. | 25, 30, 40, 50, 60, 65, 75, 80, 100. |
| 46 | | D = double tailed link without NEMA button head. | |
| 72 | K = complies with ANSI C 37-42 requirements for fast acting K characteristics. | BR = as pattern B but the button head is attached via a 1/4 UNF thread to allow use of an extension rod. | |
| | XA = this type of explosion fuse link has an extra rapid characteristic. It is suitable for applications where a high degree of system protection is required at the expense of discrimination. | See outline drawings opposite page for reference. | |
| | S = Solid links rated at 100A only are also available in both button head and universal versions for fitting into explosion fuse carriers where required. These can be ordered in a similar way using the abbreviation S, e.g. 15SB100, etc. | | |

Thus a typical ordering reference for a 15 kV NEMA type K, button head 30A fuse link would be 15KB30 explosion fuse link.

The fuse link assembly for a given range is standard to all Voltages. The exception is that the tail length is varied to suit the dimensions of explosion carrier of different ratings.

Specifications

Description

Expulsion fuse links available in a wide range of options from 15 kV to 72 kV in ANSI T &K characteristics.

Ratings

Voltage: 15 to 72 kV

Amps: 1 to 100 A

Breaking capacity: depends on voltage but is approximately 8 kA

Agency information

Type T: complies with ANSI C37-42

Type K: complies with ANSI C37-42

Time-current curves and cut-off curves

See list page 118 and data on USB at the back of the catalogue.

Packaging

Up to and including 50A: 25 in a carton.

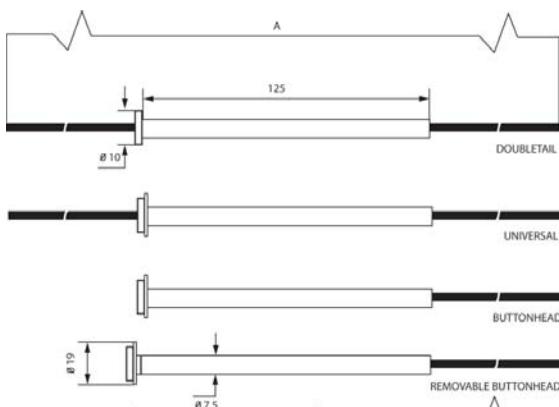

From 60A to 100A: 10 in a carton.

To avoid incorrect replacement the fuse links have colour coded labels:

Pink label: Type XA.

Yellow label: Type K.

Green label: Type T.

1-50A

Typical applications

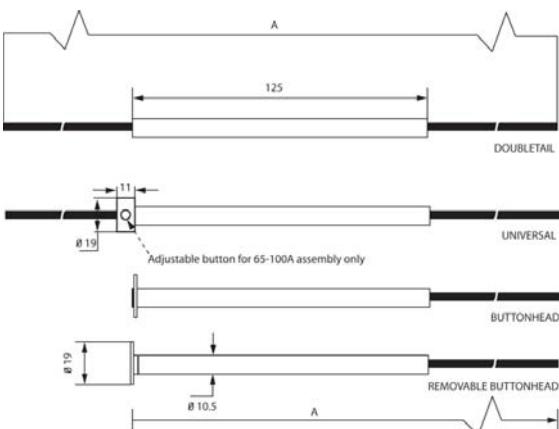

- Primary side transformer protection.
- Feeder protection.
- Capacitor bank protection.

| Type | kV | A |
|------|-------|------------|
| | 15 kV | 533 (21") |
| | 25 kV | 660 (26") |
| | 46 kV | 787 (31") |
| | 72 kV | 1016 (40") |

Note:

Type BR is similar to button head shown, except that the button head is attached via a $\frac{1}{4}$ UNF thread.

Tails can be cut to any length.

60-100A

ASL - Automatic sectionalising links

- Low cost retrofit option for spur line isolation in place of existing expulsion fuse links.
- Available for up to 33 kV lines.
- Standard pick-up current ratings of 20, 25, 40, 50, 63, 100 Amps.
- Other ratings up to 320 Amps available.
- Available in single or 3-phase ganged arrangements.
- Enhanced lightning immunity performance.

Eaton's Bussmann series Automatic Sectionalising Link ASL (smart links)

Eaton's low cost retrofit Automatic Sectionalising Link (ASL), represents a significant breakthrough in the field of high voltage overhead line distribution system protection. It is a completely self-contained device designed for use with multi-shot circuit breakers or auto-reclosers. The ASL was originally developed by Eaton from invention by the Electrical Council Research Centre, now EA technology in the UK.

Eaton's ASL ensures effective overhead spur line isolation in the event of a genuine local fault, while at the same time remaining unresponsive to transient (temporary) no-damage surge currents, caused by electrical storms etc, see figure 1.

How the sectionaliser works

The sectionaliser houses a logic circuit in its main conductive carrying tube. This ensures the electronic circuitry is free from electrical interference, as the tube acts as an effective Faraday cage and is powered by a small current transformer mounted on the outside of the carrier tube.

Statistics show that 90% of expulsion fuse operations on spur lines are in response to transient no-damage faults and that the cost for each expulsion fuse link replacement can be of the same order as the capital cost of a complete fuse cut-out. The alternative approach favoured by some Utilities of replacing expulsion fuse links by solid links has the major disadvantage that any permanent fault on a spur line results in an outage of the whole system.

Eaton's Bussmann series ASL provides an economic solution to the problem, by ensuring effective spur line isolation in the event of a genuine local fault, while at the same time remaining unresponsive to transient no-damage surge currents.

Operation is accomplished by discharging a capacitor into a small chemical actuator (or 'striker') which unlatches the carrier tube and causes it to swing down. The ASL is reset by fitting a replacement actuator and re-inserting the carrier into its mount.

The logic circuit is designed to inhibit response to transformer magnetising inrush current surges and induced current waves resulting from electrical storms. Therefore, in practice any spur line fault condition which persists for a time of several seconds will operate the ASL, so isolating the spur as explained above. Any transient or 'no damage' current will be ignored.

Operational sequence

The logic circuit on the printed circuit board within the ASL is powered by a small current transformer mounted on the outside of the conductive carrier tube. Under normal load conditions the printed circuit board remains inert. However, should the line current increase above a certain pre-set value (the pick-up current) the logic circuit activates. The upstream auto re-closer then opens, temporarily removing the fault from the line. The logic circuit, powered by an internal capacitor, stores the incident for around 25 seconds (the 'reclaim' time). When the upstream device re-closes, some three to ten seconds later, if the fault current is no longer in evidence, the ASL will ignore the incident and eventually reverts to an inert state again. However if the fault current (i.e. a current above the pick-up value) is still present, the logic circuit will decide that this represents a permanent fault on the spur line and will prepare to de-latch. The logic circuit is however, inhibited from operating the latch mechanism until the upstream recloser has tripped for the second time and the line current has fallen to a value of less than 300mA (the 'hold-off' current) for a period of at least 0.1 second. The ASL thus operates during the dead time of the upstream protective device and does so quietly, without sparks or ionised gas emission and without contact erosion.

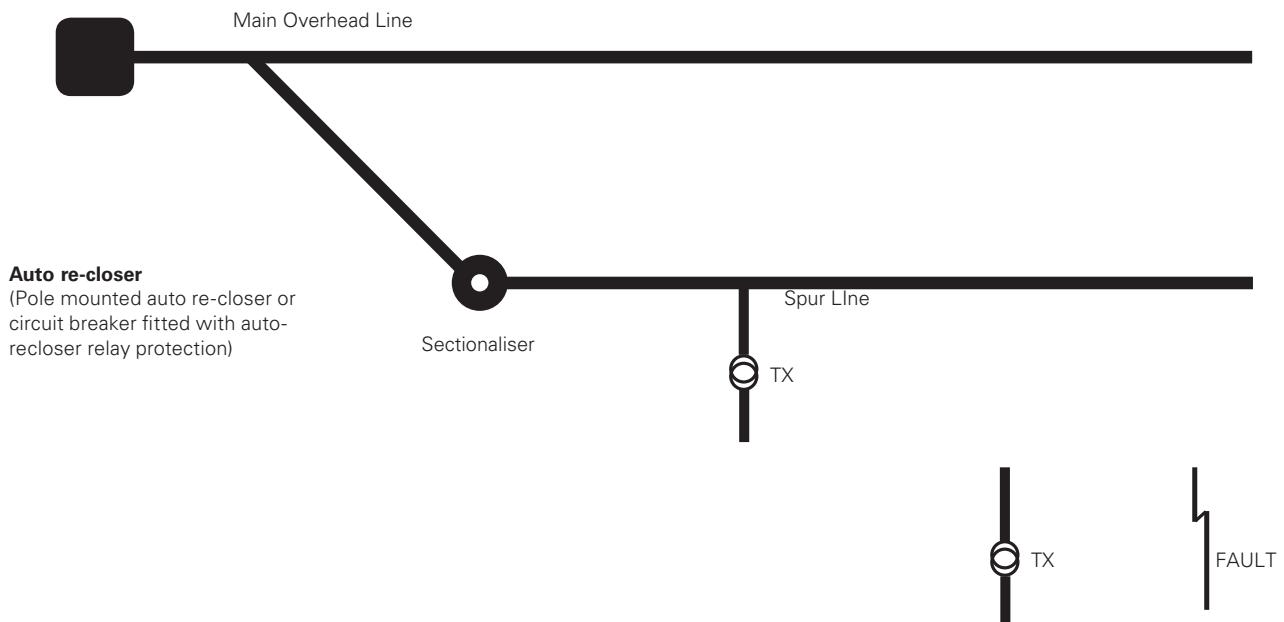

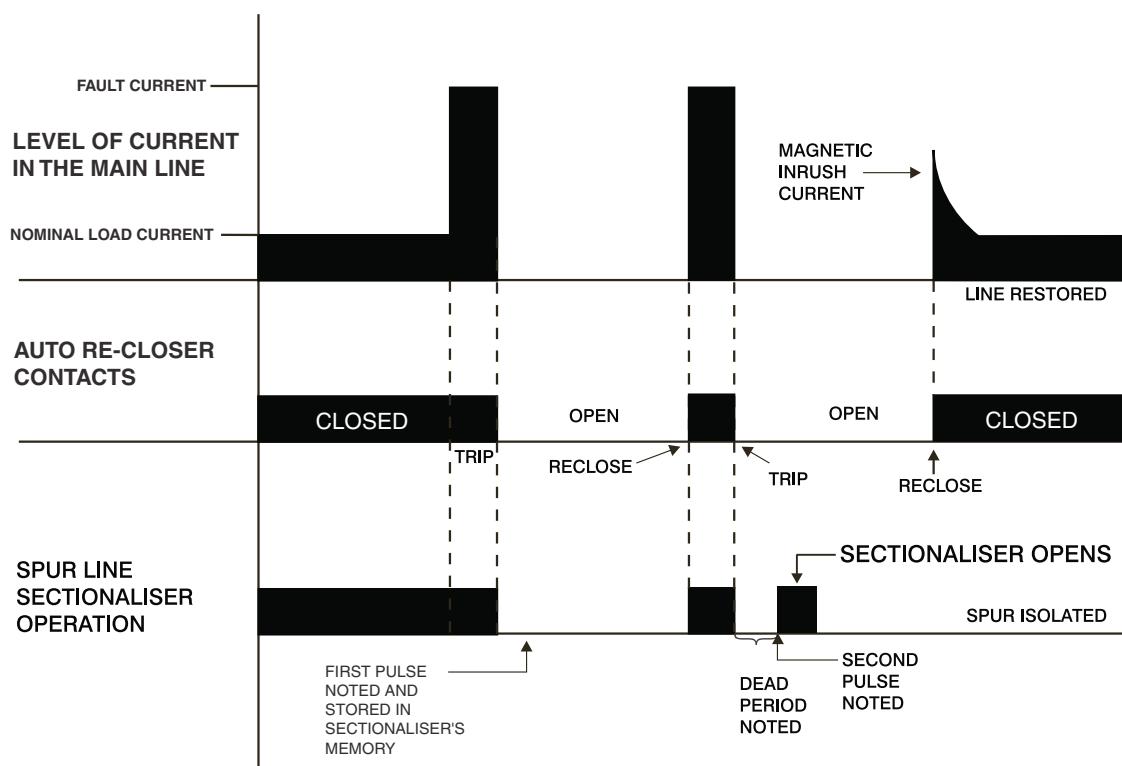

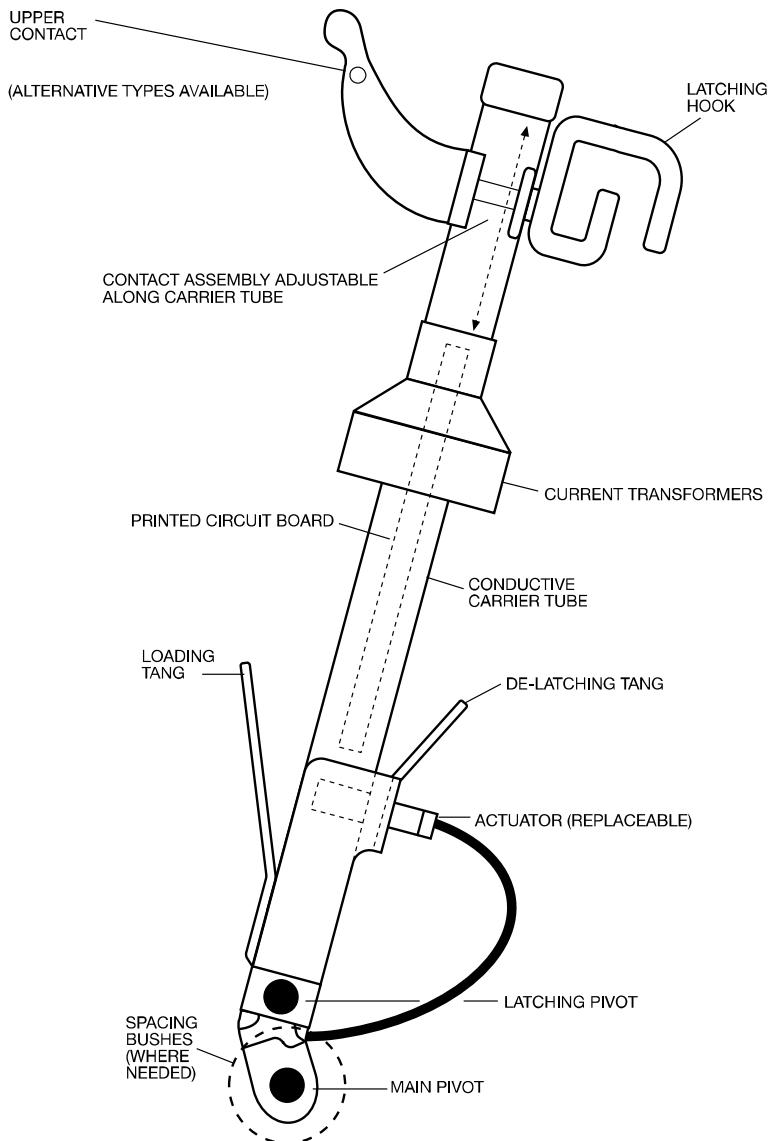

Figure 1

Sectionaliser isolating a spur-line fault

ASL - Automatic sectionalising links

Mounting arrangements

The contact assemblies of the ASL are adjustable to allow for use with a variety of types of expulsion fuse mount. Alternative upper contact assemblies are available. These can be either fitted to the ASL during manufacture or may be provided loose as conversion kits. ASLs can also be provided complete with suitable 'fuse mounts' where required.

Applications

The ASL must be used in conjunction with either an upstream circuit breaker having multi-shot reclose facility or an auto-recloser. In either case the dead time of the device must be appreciably less than the 25 second ASL reclaim time.

The most useful pick-up current setting is likely to be 100A. This will allow protection of spur line loads totalling up to 1000 kVA 3-phase (11 kV).

Where the total load is smaller and greater sensitivity to low level faults is required, one of the alternative lower settings can be supplied. It should be noted that the recommended pick-up current setting is approximately twice the value of the maximum load current of the connected downstream transformers.

Additional information

- Response time: At inception < 50 ms
- Weight: 1.6 kg
- Maximum recommended mounting height: 10 metres
- Hold off current: > 300 mA
- The three-phase version is available to suit Morris Line Equipment mounts only, ref. BR1T

Boric acid fuse links

- Expulsion style fuse link complete with a single-pole porcelain fuse mount.
- Available from 17 kV to 38 kV, 3 to 200A.
- Can be used indoors and outdoors.
- ANSI C.37 and Australian standard AS1033.

Introduction

Eaton's Bussmann series BBU medium voltage boric acid fuse link and complementary fuse mount or cut-out package is an expulsion fuse link style fuse, complete with a single-pole porcelain fuse mount offering medium voltage protection for indoor and outdoor applications.

The fuse mount is available at either 17 or 27 kV and is designed to withstand the most hazardous environmental conditions. The contact system is made from a copper alloy ensuring a long service life in the field.

The fuse mount already has the outdoor fittings, so simply adding a Eaton's Bussmann series BBU fuse link will deliver a complete outdoor transformer protection solution.

Eaton's Bussmann series BBU fuse links can be used indoors as well as outdoors. A muffler attachment can be ordered to limit noise and contamination to indoor equipment during operation.

BBU fuse links are designed to be interchangeable with other leading manufacturers and are available from 17 kV through to 38 kV, from 3 to 200 amps, with K, E and SE time-current characteristics.

Boric acid fuse link employs calibrated silver elements combined with boric acid crystals for its interruption media. The mechanical utilisation of the spring and rod mechanism creates an interruption technique that offers mild exhaustion during fault interruption.

Boric acid fuse links are ideally suited to provide distribution transformer protection within electrical distribution networks.

Features of BBU Fuses

A complete distribution transformer package from a single source. Eaton offers a single source for all of your protection needs, both fuse links and fuse mount are fully interchangeable with other manufacturers product lines.

Sealed fuse links - All BBU fuse links are sealed from moisture ingress, preventing deterioration of performance in the fields and improving overall network reliability while reducing costs.

Fully tested - Eaton's Bussmann series BBU fuse links are tested to both ANSI C.37 and Australian standard AS1033.1, which due to Australia's unique landscape and harsh climate, is widely regarded as the most onerous type test of expulsion fuse link style protection in the world today.

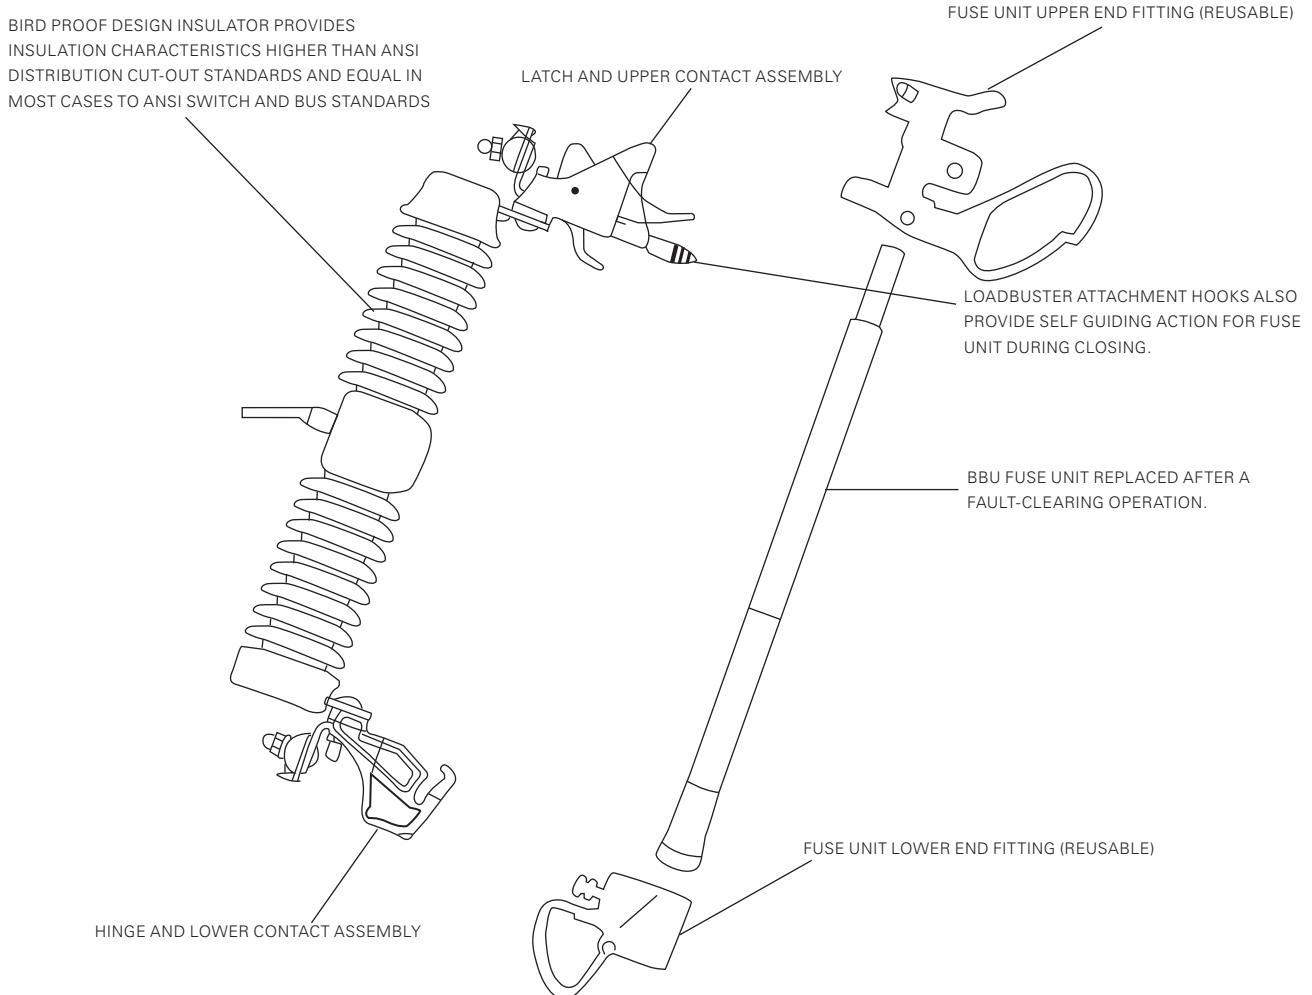

Single piece end fittings - Eaton's Bussmann series fuse link package comes with single piece end fittings, reducing set-up time in the field and lowering inventory, thereby improving network productivity.

Single wrench installation - The fuse links are designed to be installed with a single type of tool, again reducing maintenance, replacement and installation costs.

Other features to improve safety and overall reliability induce the use of a Nichrome strain element, to reduce susceptibility to spurious operation in the field caused by vibration and corona, a glass epoxy tube, preventing warping during long time exposure and permanent date marking facilitating a more robust operation and maintenance regime.

BBU Fuse link mount construction

BBU Fuse construction

Principle parts of the replaceable BBU fuse unit are shown in the cross section view. Main operating parts are the silver element, arcing rod, boric acid cylinder and spring. A glass epoxy tube encloses the assembly.

The use of a pure silver element and Nichrome wire stain element makes the BBU less susceptible to outages caused by vibration, corona corrosion, and aging of the fuse elements. It is not damaged by transient faults or overloads which approach the minimum melt point.

The components are housed in a fiberglass reinforced resin tube with plated copper contacts. Positive connection is maintained between the arcing rod and contact with a sliding tulip contact.

BBU End fittings

Fuse unit lower end fitting.

Muffler part number: BBU-MFLR

Boric acid fuse links

Operation

BBU expulsion fuse links utilise the proven performance of boric acid to create the de-ionizing action needed to interrupt the current. Fault interruption is achieved by the action of an arcing rod and a charged spring, elongating the arc through a boric acid chamber upon release by the fuse element.

At high temperatures, boric acid decomposes, producing a blast of water vapor and inert boric anhydride. Electrical interruption is caused by the steam extinguishing the arc, as the arc is being elongated through the cylinder.

Higher particle turbulence of the boric acid causes the rate of de-ionization in the cylinder to exceed the ionization of the electrical arc. Both high and low current faults are interrupted in the same manner with no foreign material other than the boric acid required. This enables the fuse to interrupt short-circuit within one half cycle and prevents the arc from restriking after a current zero.

After interruption, the gases are expelled from the bottom of the fuse.

The arching rod is prevented from falling back into its original position by a friction stop at the top of the fuse unit.

When the fuse operates, the upward motion of the spring forces the top of the arcing rod to penetrate the upperseal, striking the latch mechanism.

On indoor applications, this action caused the blown fuse indicator to actuate.

When replacing the blown fuse link, the end fittings should be removed from the operated fuse unit, and if undamaged, clamped onto the new fuse unit.

Application

The BBU Boric acid fuse provides effective protection for circuits and equipment which operate on voltage system up to 34.5 kV. They can be used on industrial distribution systems and all fuses are designed for use on the following:

- Power transformers.
- Feeder circuits.
- Distribution transformers.
- Metal-enclosed switchgear.
- Pad mount switches.

BBU fuse units can be used in indoor applications, and can be used to directly replace competitive equivalent units.

Part numbers and technical data

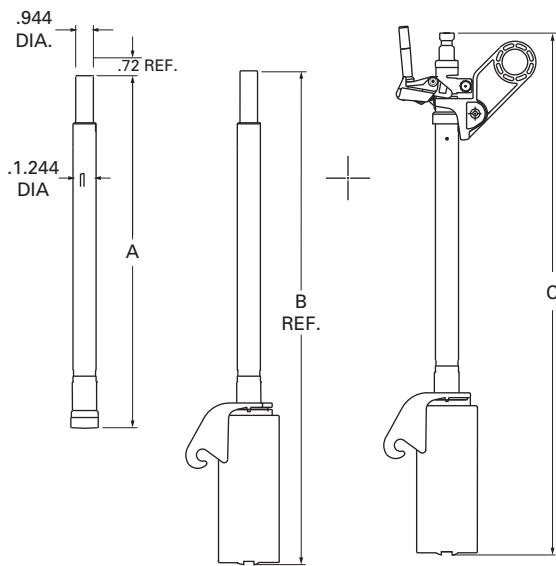

| Part numbers | 1Min High voltage withstand test kV | Total insulator length inches (mm) | A inches (mm) | B inches (mm) | Approximate weight (kg) |
|--------------|-------------------------------------|------------------------------------|---------------|---------------|-------------------------|
| BBU27-PDM | 42 | 18.3 (465) | 20.4 (516.9) | 21 (534) | 20 |
| BBU17-PDM | 35 | 14.8 (375) | 16.8 (426.9) | 17.5 (444) | 17.5 |

Outdoor BBU Fuse fitting

Outdoor end fittings are made of a cast-copper plated alloy. A large hook eye on the upper fitting allows for easy installation into pole-top mountings with a hook stick. The pivotal design of this hook eye provides for proper engagement of the upper live part. The positive locking action of the latch mechanism prevents detachment from the mounting due to shock or vibration. In the event of a fault, the arcing rod will penetrate through the upper end of the fuse unit, and cause the latch to release. Once released, the fuse will rotate down into the drop-out position to indicate a blown fuse condition. The lower end fitting has two cylindrical posts that insert into the lower live part of the mounting. These posts allow the fuse to rotate into the proper engaged position, and suspend the fuse during a blown, drop-out condition.

Boric acid fuse links

Fuse dimensions

| Fuse unit fitting inches (mm) | | | |
|-------------------------------|-------------|-------------|-------------|
| kV max | A | B | C |
| 17 | 198 (484) | 27.19 (690) | 28.82 (732) |
| 27 | 22.58 (573) | 30.69 (779) | 32.32 (821) |
| 38 | 28.76 (730) | 36.87 (936) | 38.50 (978) |

Application notes

Low currents, usually referred to as overload currents, must be considered as BBU fuses have a rather low thermal capacity. They cannot carry overloads of the same magnitude/duration as motors and transformers of equal continuous currents. For this reason, the BBU fuse must be sized with the load current in mind so the fuse does not open on otherwise acceptable overloads and inrush conditions. Coordination should be considered to help determine what type of fuse is applied. The BBU fuse interrupts at a natural current zero in the current wave and allows minimum of a half-cycle of fault current to flow before the fault is cleared. The time-current characteristics associated with a BBU fuse has a rather gradual slope making it easier to coordinate with downstream equipment. In addition, the BBU is ideal for higher voltage (up to 38 kV) and high current applications (up to 200A). It is important to examine the minimum melting and total clearing time-current characteristics of this fuse.

Standards

Eaton does not compromise when performance, quality and safety are involved. Exacting standards have been established relative to the design, testing and application of expulsion type power fuses. Compliance with these standards ensures the best selection and performance. The BBU Power fuses are designed and tested for compliance to global standards such as ANSI and Australian standard AS1033.1 1990. ANSI (American National Standards Institute) is a non-profit privately funded membership organization that coordinates the development of the US voluntary national standards.

Testing

Eaton's Bussmann series BBU Power fuse links and fuse mounts were tested in compliance to the standards listed below. This testing was carried out in independent test laboratories in Canada and in Australia by recognised independent power testings laboratories. Thermal and interrupting testing was conducted at 17, 27 kV. The entire series of tests was conducted in a specific sequence as

stipulated by governing standards without any maintenance being performed. All tests results are verified by laboratory tabulations and oscillogram plots.

- ANSI C37.40 - Service conditions and definitions.
- ANSI C37.41 - Power fuse design and testing.
- ANSI C37.42 - Distribution fuse ratings and specification.
- ANSI C37.46 - Power fuse ratings and specifications.
- ANSI C37.48 - Power fuse application, operation and maintenance.
- AS1033.1 1990 - Australian standard high voltage fuses expulsion type.

Specifications

Description

Expulsion fuse link style fuse, complete with a single pole porcelain fuse mount offering medium voltage protection for indoor and outdoor applications.

Ratings

Voltage: 17 - 38 kV (for the fuse link)

7 and 27 kV (for the fuse mount)

Amps: 3 - 200 A (for the fuse link)

IR: 10, 12 or 14 kA

Time-current curves

see curves on CD at the back of the catalogue.

Agency information

Refer to the 'Standards' paragraph.

Typical applications

- Power transformers.
- Feeder circuits.
- Distribution transformers.
- Metal enclosed switchgear.
- Pad mount switches.
