BUSSMANN SERIES

EATON

Powering Business Worldwide

We make what matters work.*

At Eaton, we believe that power is a fundamental part of just about everything people do. That's why we're dedicated to helping our customers find new ways to manage electrical, hydraulic and mechanical power more efficiently, safely and sustainably. To improve people's lives, the communities where we live and work, and the planet our future generations depend upon. Because this is what really matters. And we're here to make sure it works.

Powering Business Worldwide

We make what matters work.

Eaton is the leading source of fusible circuit protection solutions in the global marketplace. Eaton's Bussmann series products are approved for use around the world and meet agency requirements and international standards: IEC, VDE, DIN, UL, CSA, BS and others.

Eaton's Bussmann business European headquarters are in Burton-on-the-Wolds, Leicestershire (UK).

Eaton manufactures over 50,000 Bussmann series part numbers covering extensive fusible circuit protection solutions for a wide range of applications: residential, industrial, motor protection, power conversion and distribution.

Eaton has been a leading exponent in the design, development and manufacture of low voltage fuse links and their associated accessories for more than 100 years and has supplied fuse links to more than 90 countries worldwide.

Eaton's team of specialist Engineers and Field Applications Engineers plays a leading role in international standardisation of low voltage fuse links offering comprehensive advice on selection and applications.

With a continual commitment to meet our customers' needs with innovative high quality products with ISO 902 'approval systems', Eaton is the supplier of choice for circuit protection solutions.

Industrial and motor applications to BSS88 - Standard

Offset bolted tags fuse links

Offset bolted tags fuse links

Specifications

Description

Fuse links for general industrial applications with Q1 fusing factor, general purpose (gG) and motor protection (gM) characteristics for general industrial and motor applications.

Technical data

Rated voltage:

- gG: up to 550 V a.c. see tables for details
- gM: up to 500 V a.c. see tables for details

Rated current: 2 to 200 A, see tables for details

Breaking capacity: 80 kA up to 550 V a.c. see tables for details

Standard/agency information

Meets BS88 Part 1 and 2, IEC 60269 parts 1 and 2

Product selection

NITD, class gG, 550 V a.c., 2 to 32 A - class gM, 415 V a.c., 20 to 32 A

Industrial and motor applications to BSS88 - Standard

Offset bladed tags fuse links

Offset bladed tags fuse links

Specifications

Description

Fuse links for general industrial applications with Q1 fusing factor, general purpose (gG) and street lighting applications.

Technical data

Rated voltage:

- gG: up to 550 V a.c., see tables for details
- gM: 415 V a.c., see tables for details

Rated current: 2 to 125 A

Breaking capacity: up to 80 kA (see tables for ratings)

Standard/agency information

Meets BS88 Part 1 and 2, IEC 60269 parts 1 and 2, in accordance with RoHS 2011/65/IEC.

Special DC range offset/centre bolted tags fuse links

Specifications

Description

Fuse links for industrial DC applications available in offset and centre bolted tags for the protection of DC electrical circuits.

Technical data

Rated voltage: 500 V d.c.(max 20 mS time constant)*
 Rated current: 10 to 63 A
 Breaking capacity: 40 kA at 500 V d.c.

Standard/agency information

Meets BS88 Part 1 and 2, in accordance with RoHS 2011/65/IEC.

Product selection

HS07, class gG, 500 V d.c, 10 to 32 A, offset bolted tags

Specifications

Description

Fuse links for industrial applications with 690 V a.c. that meets dimensional and performance requirements of BS88 and IEC 60269-1-2 standards for the protection of large industrial installations up to 690 V a.c.

Technical data

Rated voltage: 690 V a.c.
 Rated current: 2 to 32 A
 Breaking capacity: 80 kA at 690 V a.c.

Standard/agency information

Meets BS88 Part 1 and 2, IEC 60269 parts 1 and 2, in accordance with RoHS 2011/65/IEC.

Offset bolted tags fuse links

Specifications

Description

A range of BS fuse links in sizes A1 to A4 specifically designed for the protection of general industrial applications e.g. power distribution, cable protection, motor protection.

Technical data

Rated voltage:

- Size A1: 550 V a.c. / 250 V d.c.
- Size A2 to A4: 660-690 V a.c. / up to 460 V d.c. see tables for details

Rated current: 2 to 200 A

Breaking capacity: 80 kA up to 690 V a.c., see tables for details

Standard/agency information

BS88-1 and 2, IEC 60269-2

Centre bolted tags fuse links

Specifications

Description

A range of centre tagged BS fuse links in sizes B1 to B4, C1 to C3 and D1 specifically designed for the protection of general industrial applications, e.g. power distribution, cable protection, motor protection.

Technical data

Rated voltage:

- gG: up to 690 V a.c. / 460 V d.c., see tables for details
- gM: up to 690 V a.c. / 550 V d.c., see tables for details

Rated current: 2 to 1250 A

Breaking capacity: 80 kA up to 690 V a.c., see tables for details

Standard/agency information

BS88-2 and IEC 60269-2

Product selection

TB, class gG, 660 V a.c. and 460 V d.c., 4 to 63 A

Catalog numbers	Rated voltage	Rated current (Amps)	Breaking capacity	Operating class	Fixing centre (mm)	Pack quantity
TB4	660 V a.c. / 460 V d.c.	4	80 kA at 660 V a.c.	gG	97	20
TB6	660 V a.c. / 460 V d.c.	6	80 kA at 660 V a.c.	gG	97	20
TB10	660 V a.c. / 460 V d.c.	10	80 kA at 660 V a.c.	gG	97	20
TB16	660 V a.c. / 460 V d.c.	16	80 kA at 660 V a.c.	gG	97	20
TB20	660 V a.c. / 460 V d.c.	20	80 kA at 660 V a.c.	gG	97	20
TB25	660 V a.c. / 460 V d.c.	25	80 kA at 660 V a.c.	gG	97	20
TB32	660 V a.c. / 460 V d.c.	32	80 kA at 660 V a.c.	gG	97	20
TB40	660 V a.c. / 460 V d.c.	40	80 kA at 660 V a.c.	gG	97	20
TB50	660 V a.c. / 460 V d.c.	50	80 kA at 660 V a.c.	gG	97	20
TB63	660 V a.c. / 460 V d.c.	63	80 kA at 660 V a.c.	gG	97	20

Technical drawing of the NNS 32A 550V switchgear, showing three views with dimensions:

- Front View (Top):** Shows the front of the switchgear with a height dimension of 80.3 ± 0.5 mm.
- Front View (Bottom):** Shows the front of the switchgear with a width dimension of 25.4 ± 0.25 mm. The label "Type NNS 32A 550V" is visible.
- Side View (Left):** Shows the side profile of the switchgear with a depth dimension of 48 ± 0.8 mm.
- Side View (Right):** Shows the side profile of the switchgear with a height dimension of 76.3 ± 0.25 mm.
- Top View (Bottom):** Shows the top of the switchgear with a width dimension of 15.5 ± 0.15 mm.

Street lighting applications to BS88

Cylindrical fuse links

Cylindrical fuse links

Specifications

Description

General fuse links for general street lighting applications with Q1 fusing purpose

Technical data

Rated voltage: 415 V a.c.
Rated current: 2 to 32 A
Breaking capacity: 80 kA at 415 V a.c.

Standard/agency information

Meets BS88 Part 1 and 2, IEC 60269 parts 1

Product selection

SMD, class gG, 415 V a.c., 2 to 32 A

Catalog number	Rated voltage	Rated current (Amps)	Breaking capacity	Operating class	Pack quantity

Cylindrical slotted and non slotted types fuse links

Specifications

Description

Cylindrical type fuse links designed to be used with wedge type fuse carriers on BS applications. These fuse links will be used by Electrical Authorities in distribution pillars, open type substation boards, heavy duty cut-outs and underground connection boxes. Can also be fitted in pole or wall mounted outdoor service fuse links.

Arc limiter non slotted types limiters fuse links

Specifications

Description

Arc limiter non slotted type fuse links are specifically designed to be used for safe working on live systems. Their aR characteristics offers ultra high speed protection and maximum arc flash reduction. They are not suitable for low overload fault protection.

Technical data

Rated voltage: 415 V a.c.
Rated current: 200 and 315 A
Breaking capacity: 80 kA at 415 V a.c.

Standard/agency information

Dimensions in accordance with BS88-2 system I
Performance in accordance with BS88-4

Specifications

Description

A square bodied range of industrial fuse links for a wide variety of applications.

Standard/agency information

IEC 60269-1 and 2, VDE 0636, DIN 43620 and CE

Technical data

Sizes 000 to 4
 Rated voltage: 500 V a.c.
 Rated current: 2 to 1250 A
 Operating class: gG/gL
 Breaking capacity: 120 kA AC
 Operating frequency: 45-62 Hz

Specifications

Standard/agency information

Description

IEC 60269, DIN 43620 and CE

A square bodied range of industrial fuse links specifically designed where weather resistance is needed.

Technical data

Sizes: 00 and 2
 Rated voltage: 500 V a.c.
 Rated current: 35 to 400 A
 Operating class: gG/gL
 Breaking capacity: 120 kA AC

800 V a.c., class gG, 32 to 250 Amps, sizes 1 and 2 NH fuse links

Specifications

Description

Eaton's Bussmann Series NH gG fuse links are designed to ensure cable protection up to 800 V a.c. They are also ideally suited for the cable protection on the AC side of solar string inverters with outputs up to 800 V a.c.

Technical data

Sizes DIN Style NH 1 and 2
 Rated voltage: 800 V a.c.
 Rated current: 32 to 250 A
 Operating class: gG
 Breaking capacity: 80 kA AC
 Operating frequency: 45-62 Hz

Standard/agency information

EBV Vertical NH Fuse switch disconnectors

Specifications

Description

Eaton's Bussmann series NH Vertical fuse switch disconnectors are specifically designed to be used with NH Fuse links. All energized metal parts are fully protected against accidental contact. They are suitable for direct installation on horizontal or vertical busbar systems. The three poles can be switched independently or simultaneously depending upon the version. These are manually operated switches and the making and breaking is dependent on the speed of the operation. The Bussmann serie EBV NH gear range is provided complete with the clamps (i.e. screws V-terminals/2V-terminals) and shrouds for cable termination.

Specifications

Description

Eaton's Bussmann series EBH000 NH Horizontal fuse switch disconnecter is specifically designed to be used with size 000 NH Fuse links up to 160 A. They have compact dimensions, all energized metal parts are fully protected against accidental contact. These are manually operated switches and the making and breaking is dependent on the speed of the operation.

Technical data

- Rated voltage: 690 V a.c.
- Rated current: 160 A
- Utilisation category:
 - AC21B
 - AC22B
 - AC23B
 - DC21B

Standard/agency information

- IEC 60947-1 and 3, EN 60947-1 and 3

Specifications

Description

Eaton's Bussmann series NH horizontal fuse switch disconnectors are specifically designed to be used with NH fuse links.

All energised metal parts are fully protected against accidental contact. These are manually operated switches and the making and breaking is dependent on the speed of the operation. The Bussmann series EBV NH gear range is provided complete with the clamps (i.e. screws/V-terminals/2V-terminals) and cable for shrouds for cable termination.

Technical data

- Rated voltage: 400, 500 and 690 V a.c.
- Rated current: 160 to 1600 A
- Utilisation category:
 - AC21B Size 4
 - AC22B Sizes 00 (V 120), 1-S, 3, 4
 - AC23B Sizes 00 to 2
 - DC21B Sizes 00, 2 and 3
 - DC21B Sizes 00, 1 and 2

Standard/agency information

- IEC 60947-1 and 3, EN 60947-1 and 3

Type D Time delay / fast acting / ultra rapid fuse links, bases and accessories

Specifications

Description

Class gG D fuse links for industrial and domestic applications.
All these fuse links incorporate a visual indicator of fuse operation.

Technical data

Rated voltage: 500 V a.c.
Rated current: 2 to 200 A
Breaking capacity: 50 kA at 500 V a.c.
Operating class: Time delay, fast acting and ultra rapid

Standard/agency information

IEC 60269 and VDE 0636

Specifications

Description

Class gG DO fuse links for industrial and domestic applications.
All these fuse links incorporate a visual indicator of fuse operation.

Standard/agency information

IEC 60269 and VDE 0636

Technical data

Rated voltage: 400 V a.c.
Rated current: 2 to 100 A
Breaking capacity: 50 kA at 400 V a.c.
Operating class: Time delay and ultra rapid

Product selection

NZ01, 400 V a.c., 2 to 16 A, size D01, time delay and ultra rapid fuse links

* Rated voltage 500 V a.c.

Application information

The Eaton's Bussmann series standard range of high breaking capacity fuse links, for low voltage industrial and general purpose applications, meet the requirements of BS88 and IEC 60269. By using advanced fuse technology the current ratings up to 400 A have compact dimensions but are still within the standardised dimensional and performance requirements. These designs have been optimised for 415/240 V systems. The standard range of fuse links are available from 2-1250 A in the following tag forms: offset bladed - offset bolted and centre bolted. IEC 60269, DIN 43620 fuse links are available from 2 to 1250 A in standard sizes 000 to 4a.

Supplementary ranges cover applications up to 690 V a.c. and 500 V d.c. including those with non-standard tag fixings.

Eaton's Bussmann series fuse links are manufactured under Quality Systems independently assessed to ISO 9001 and appropriate ratings carry the ASTA 20 endorsement.

Application data

One of the long standing advantages of fuse protection is that fuse selection is relatively simple and effective.

The following notes cover the majority of applications. For further information contact Eaton's Bussmann business technical department 00 44 (0) 1509 882 699 or buletechnical@eaton.com.

Reference should also be made to the appropriate Wiring Installations rules, in the UK the 17th Edition of the IEE Wiring Regulations for Electrical installations which aligns with IEC 60634.

Circuit loading

The current rating of the fuse link should not be less than the full load current of the circuit. The circuit should be so designed that small overloads of long duration will not be of frequent occurrence.

Cable ratings

There is an increasing move away from 70°C P.V.C. insulation to materials which are more environmentally friendly, for example 90°C XLPE. The ratings of fuse gear, switches, accessories etc, are generally based upon the equipment being connected to conductors intended to be operated at a temperature not exceeding 70°C in normal service.

In view of the above it is recommended that the practice of designs based upon conductor temperatures of 70°C be regarded as the norm. In accordance with the Wiring Regulations the equipment manufacturer should be consulted to ascertain the reduction of nominal current rating of the equipment if conductor temperatures exceeding 70°C are used. In addition overriding factor is often voltage drop consideration.

Cable protection

Eaton's Bussmann series fuse links with gG characteristics protect associated cables against both overload and short circuit current, provided that the current rating of the fuse link I_n is equal or less than the current carrying capacity of the cable I_z .

In motor circuits, the motor starter will provide the overload protection and the fuse links will provide the short circuit protection. The maximum size of fuse link that can be used depends upon the type of cable used and is determined in accordance with the Wiring Regulations using the appropriate K factor. The following table gives maximum sizes of fuse links that are recommended for two popular cables with copper conductors 70°C P.V.C. (K=115) and 90°C thermosetting (K = 143).

Ambient temperature

A de-rating in terms of current of 0.5% per 1°C above an ambient of 35°C is recommended.

Breaking capacity

For BS88 fuse links the standardised values of breaking capacity are 80 kA for voltages of 415 V a.c. and above, and 40 kA for d.c. applications. For IEC 60269 (DIN 43620) fuse links the breaking capacity is typically 120 kA for voltages of 500-690 V a.c.

Discrimination

All fuse links will give discrimination ratio of 2:1 and for more practical situations a ratio of 1.6:1 (two steps in the R10 series). Example an upstream fuse link rated at 160 A will discriminate with a downstream fuse rated at 100 A.

Current and energy limitation

Eaton's Bussmann series range of fuse links have pre-arcing I^2t values towards the bottom limits of the standards. This ensures excellent current and energy limitation. They also have lower power losses at rated current. This assists in the appropriate interchangeability with other makes of fuse links.

Transformers

When fuse links are used on the primary side of transformers the normal current rating of the fuse links should be at least twice the nominal transformer primary current. The inrush current can be estimated at 12 x Full Load Current (FLC) for purposes of fuse link selection.

Fluorescent lighting

The normal current rating of the fuse link should be at least twice the normal full load current of the maximum number of lights to be switched simultaneously.

Capacitor circuits

In capacitor circuits, for example power factor correction, the fuse link should be chosen with a current rating typically twice the rated capacitor current. This takes in account of the high transient inrush current, circuit harmonics and capacitor tolerances.

Cable size mm ²	Max fuse rating		Cable size mm ²	Max fuse rating	
	K = 115 A	K = 143 A		K = 115 A	K = 143 A
1	16	16	25	200*	250*
1.5	20	25	35	315*	355*
2.5	32*	32*	50	400*	500
4	50*	50*	70	560	630
6	63*	63*	95	710	800
10	100*	125*	120	800	1000
16	125*	160*			

Zs ohms impedance values

The rules for protection against indirect contacts are given in the Wiring Regulations.

Recommendation is based on ambient temperature at 25°C. At higher temperatures some fuse links may have to be de-rated. Ensure the voltage rating of the fuse is suitable for the application. If in doubt contact Eaton's Bussmann business technical department: buletechnical@eaton.com or 00 44 (0) 1509 882 699.

500	0.07						
630	0.05						
800	0.04						
1000	0.038						
1250	0.026						

For a TN system, a disconnecting time not exceeding 5 seconds is permitted for a distribution circuit. The maximum values of earth fault loop impedance (Zs) corresponding to a disconnecting time of 5 seconds for a nominal voltage to earth (Uo) of 230-240 V a.c. for Eaton's Bussmann series gG fuse links to BS88: Parts 2 and 6.

Motor circuits

In motor circuits the fuse link has to withstand the starting current of the motor and often requires a higher rating than the full load current of the motor.

Coordination recommendations are made by the manufacturers of motor starters in accordance to IEC 60947-4-1. To give the desirable type 2 coordination with fuse links, tests are performed with the latest gG, gM and aM fuse links, to BS88 or IEC 60269 which have pre-arcing I^2t values towards the bottom specified limits. This means that Eaton's Busmann series fuse links are suitable to give type 2 coordination.

Extended dual ratings of motor circuit protection fuse links with gM characteristics are available in most popular sizes of fuse links to extend the use of associated equipment with appropriate economies. In the majority of applications, gG fuse links are used. It is not essential for gM and aM fuse links to be used in motor circuit protection, they simply extend the utilisation of standard equipment.

The table below shows the recommended fuse links at 415 V. In most applications the run-up time is less than five seconds and duty is infrequent - no more than twice per hour. The next larger rating should be used for more arduous conditions.

buletechnical@eaton.com

Eaton is an intelligent power management company dedicated to protecting the environment and improving the quality of life for people everywhere. We make products for the data center, utility, industrial, commercial, machine building, residential, aerospace and mobility markets. We are guided by our commitment to do business right, to operate sustainably and to help our customers manage power today and well into the future. By capitalizing on the global growth trends of electrification and digitalization, we're helping to solve the world's most urgent power management challenges and building a more sustainable society for people today and generations to come.

Founded in 1911, Eaton has continuously evolved to meet the changing and expanding needs of our stakeholders. With revenues of nearly \$25 billion in 2024, the company serves customers in more than 160 countries. For more information, visit www.eaton.com. Follow us on [LinkedIn](#).

Changes to the products, to the information contained in this document, and to prices are reserved; so are errors and omissions. Only order confirmations and technical documentation by Eaton is binding. Photos and pictures also do not warrant a specific layout or functionality. Their use in whatever form is subject to prior approval by Eaton. The same applies to Trademarks (especially Eaton, Moeller, and Cutler-Hammer). The Terms and Conditions of Eaton apply, as referenced on Eaton Internet pages and Eaton order confirmations.

Eaton is a registered trademark.

All other trademarks are property of their respective owners.
