#### Caratteristiche prodotto

- The MultiSensor communicates to Lighting Control Panels and the Area Controller via the M-BUS. The manner in which the MultiSensor controls lighting is totally flexible. Each sensing element of the MultiSensor can be individually programmed to operate any light or output, or influence a control sequence. Settings are defined in the system configuration, no custom operation settings are stored in the sensor itself. The Mode Lighting M-BUS MultiSensor contains three sensor functions: »» Passive infrared (PIR) movement detector with adjustable sensitivity of both presence and absence detection. »» Light-level sensor enables energy saving from day one design illuminance C. 20% and further enhanced up to C. 80% from daylight harvesting. »» Infrared receiver for user override from the User IR Handset.
