DoP 0311

per vite per calcestruzzo fischer UltraCut FBS II

IT

1. Codice di identificazione unico del prodotto-tipo: **DoP 0311**
2. Usi previsti: **Fissaggio post-installato negli elementi in muratura, Vedi appendice, in particolare gli allegati da B1 - B8.**
3. Fabbricante: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Germany**
4. Mandatario: **-**
5. Sistemi di VVCP: **1**
6. Documento per la valutazione europea: **EAD 330460-00-0604, Edition 04/2022**
Valutazione tecnica europea: **ETA-20/0134; 2022-07-14**
Organismo di valutazione tecnica: **DIBt- Deutsches Institut für Bautechnik**
Organismi notificati: **2873 TU Darmstadt**
7. Prestazioni dichiarate:
Resistenza meccanica e stabilità (BWR 1)
Resistenza caratteristica per la rottura dell'acciaio di un ancorante singolo sotto azione di trazione: vedi appendice, in particolare gli allegati da C1
Resistenza caratteristica alla rottura dell'acciaio di un ancoraggio a vite singola sotto carico di taglio: vedi appendice, in particolare gli allegati da C1
Resistenza caratteristica per la rottura a sfilamento o per la rottura del mattone di un ancorante singolo sotto carico di trazione: vedi appendice, in particolare gli allegati da B6,B7,C2,C3,C5,C6,C8,C9,C11,C12
Resistenza caratteristica per rottura locale o rottura del bordo del mattone di un ancorante singolo sotto carico di taglio: vedi appendice, in particolare gli allegati da B6,B7,C2,C3,C5,C6,C8,C9,C11,C12
Resistenza caratteristica per rottura del mattone di un gruppo di ancoranti sotto carico di trazione: vedi appendice, in particolare gli allegati da B6,B7,C2,C5,C8,C11
Resistenza caratteristica per rottura locale del mattone o rottura del bordo di un gruppo di ancoranti sotto azione di taglio: vedi appendice, in particolare gli allegati da B6,B7,C2,C5,C8,C11
Distanze dal bordo, interasse, spessore dell'elemento: vedi appendice, in particolare gli allegati da B6,B7,C2,C5,C8,C11

Resistenza a carichi combinati di trazione e taglio (mattoni forati e forati): vedi appendice, in particolare gli allegati da C12

Spostamenti: vedi appendice, in particolare gli allegati da C3, C6, C9, C12

Sicurezza in caso di incendio (BWR 2)
Reazione al fuoco: Classe (A1)
Resistenza al fuoco: vedi appendice, in particolare gli allegati da C4, C7, C10

Durabilità:
Durabilità: vedi appendice, in particolare gli allegati da A3, B1
8. Documentazione tecnica appropriata e/o documentazione tecnica specifica: **-**

La prestazione del prodotto sopra identificato è conforme all'insieme delle prestazioni dichiarate. La presente dichiarazione di prestazione è emessa, in conformità al regolamento (UE) n. 305/2011, sotto la sola responsabilità del fabbricante sopra identificato.

Firmato a nome e per conto del fabbricante da:

Dr.-Ing. Oliver Gelbig, Direttore Generale Unità di Business & Engineering
Tumlingen, 2022-07-28

Jürgen Grün, Direttore Generale Chimica & Qualità

Questa Dichiarazione di Prestazione (DoP) è stata preparata in varie lingue. In caso di contestazioni sull'interpretazione, prevarrà sempre la versione inglese.

L'Appendice include informazioni volontarie e complementari in lingua inglese che superano i requisiti di legge (lingua specificata in modo neutrale).

Specific Part

1 Technical description of the product

The Fischer concrete screw ULTRACUT FBS II is an anchor of sizes 6, 8 and 10 mm made of hardened carbon steel (FBS II, FBS II CP) or stainless steel with hardened tip (FBS II R). The anchor is screwed into a predrilled cylindrical drill hole. The special thread of the anchor cuts an internal thread into the member while setting. The anchorage is characterised by mechanical interlock in the special thread.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchors of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic | Performance |
|--|----------------------------------|
| Characteristic resistance to steel failure of a single screw anchor under tension loading | See Annex C 1 |
| Characteristic resistance to steel failure of a single screw anchor under shear loading | See Annex C 1 |
| Characteristic resistance to pull-out failure or brick breakout failure of a single screw anchor under tension loading | See Annex C 2 - C 12 |
| Characteristic resistance to local brick failure and brick edge failure of a single screw anchor under shear loading | See Annex C 2 - C 12 |
| Characteristic resistance to brick breakout failure of a screw anchor group under tension loading | See Annex C 2, C 5, C 8 and C 11 |
| Characteristic resistance to local brick failure and brick edge failure of a screw anchor group under shear loading | See Annex C 2, C 5, C 8 and C 11 |
| Edge distances, joint distances, spacing, member thickness | See Annex C 2, C 5, C 8 and C 11 |
| Resistance to combined tension and shear loading (hollow and perforated bricks) | See Annex C 12 |
| Displacements | See Annex C 3, C 6, C 9 and C 12 |

3.2 Safety in case of fire (BWR 2)

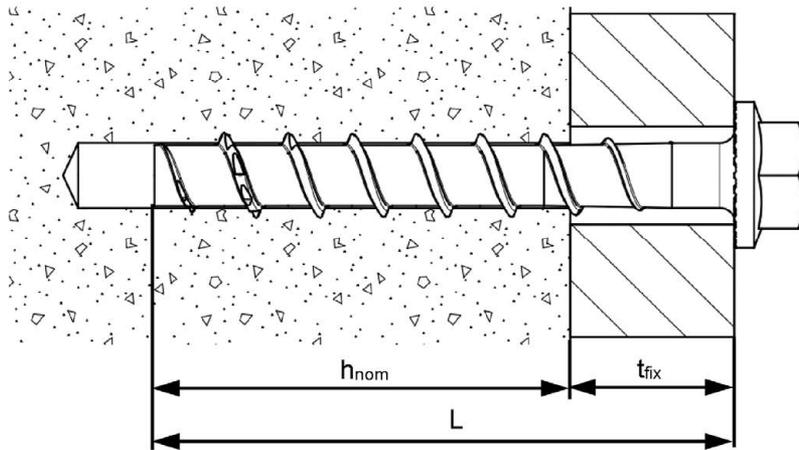

| Essential characteristic | Performance |
|--------------------------|-----------------------------|
| Reaction to fire | Class A 1 |
| Resistance to fire | See Annex C 4, C 7 and C 10 |

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

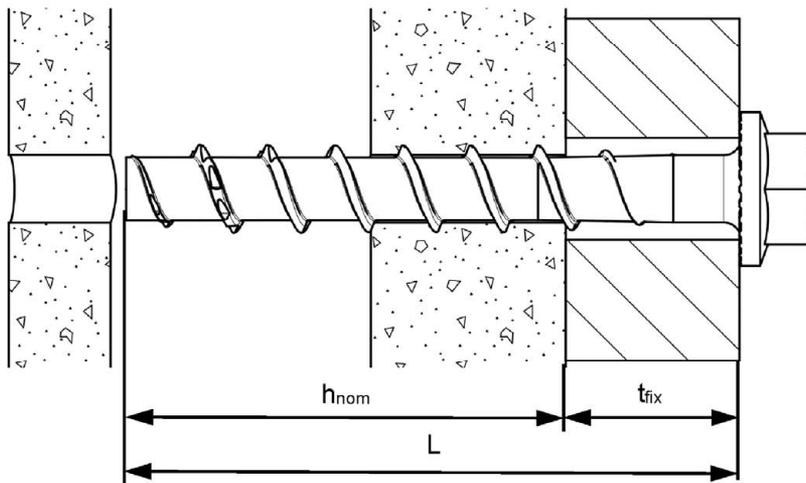

In accordance with the European Assessment Document EAD 330460-00-0604 the applicable European legal act is: 97/177/EC.

The system to be applied is: 1

Specifications of intended use

Anchorage subject to:

- Static and quasi-static actions in tension, shear or combined tension and shear or bending.
- Requirements related to resistance to fire (for dry masonry only)

Base materials:

- Solid brick masonry see Annex C 2, C 5 and C 8
- Hollow brick masonry see Annex C 11
- Minimum thickness of masonry member in accordance with brick width (see Annex C 2, C 5, C 8 and C 11)
- Horizontal joints must be completely filled with mortar according to EN 998-2:2016 with strength class at minimum M2,5. Vertical Joints can, but do not have to be filled with mortar
- In case of fire, all joints must be completely filled with mortar according to EN 998-2:2016 with strength class at minimum M5.
- Dry and wet masonry

Use conditions (Environmental conditions):

- **FBS II, FBS II CP, FBS II R:** Structures subject to dry internal conditions
- **FBS II R:** Conditions according to EN 1993-1-4:2006 + A1:2015 in accordance with Corrosion Resistance Class CRC III
- The covered temperature range of the masonry during the working life is within the range -40°C to $+80^{\circ}\text{C}$

fischer concrete screw UltraCut FBS II, FBS II CP, FBS II R
for anchorage in masonry

Intended use
Specifications

Annex B 1
Appendix 6 / 25

Design:

- The anchorages have to be designed in accordance with EOTA Technical Report TR 054:2021-05, design method A under the responsibility of an engineer experienced in anchorage and masonry work.
- Screw size D6 and nominal embedment depth smaller than 50 mm may only be used for anchoring of statically indeterminate systems
- Verifiable calculation notes and drawings shall be prepared considering the relevant masonry in the area of anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings.
- The screw must be placed only in the wall side of the masonry.
- The characteristic resistance of the assessed solid bricks is also valid for larger brick sizes and higher mean compressive strength and higher dry density of the masonry unit.
- For the calculation of pull-out of a brick under tension load $N_{Rk,pb}$ or pushing out a brick under shear load $V_{Rk,pb}$ see EOTA Technical Report TR 054:2021-05.
- For joint widths $w_j > 3$ mm, installation in the joint and close to the joint is not possible; the distances to joints c_j have to comply with Annex B 6.
- For joint widths $w_j \leq 3$ mm, installation in the joint and close to the joint is possible, if the joint factors according to Annex C are considered. Horizontal joints must be completely filled with mortar, vertical joints can, but do not have to be filled with mortar.

Installation:

- Bridging of unbearing layer t_{tol} (e.g.: plaster) is possible but has to be considered for choosing the length of the screw. t_{tol} must be added to the length. $L \geq h_{nom} + t_{tol} + t_{fix}$ (see figure Annex A1)
- During installation, the joint, spacing and edge distances specified by the planner must be considered. Installation in joints > 3 mm is not allowed.
- Hole drilling by hammer drilling or rotary drilling, with standard hammer drill bits or hollow drill bits (in accordance with Annex C). The masonry must not be damaged during hammer drilling. If cracks occur during drilling, the rotary mode must be used. In this case the hole must be aborted.
- In case of aborted hole: The hole shall be filled with high strength mortar.
- Cleaning of the hole is not necessary if the driller is vented 3 times when reaching the correct drillhole depth (According B5), or when using a hollow drill with functional suction.
- Screw installation carried out by appropriately qualified personnel under the supervision of the person responsible for technical matters on site.

Adjustment process

Installed condition before adjustment

Installed condition after adjustment

(Figures not to scale)

It is permissible to loosen the screw up to two times for adjustment.

For this purpose, the screw can be loosened up to a maximum of $L_{adj} = 20$ mm from the surface of the initial fixture. The total permissible thickness of the relining inserted during the adjustment process is $t_{adj} = 10$ mm.

The required nominal anchoring depth h_{nom} must be kept after the adjustment process.

Intended use
Adjustment process

Annex B 4
Appendix 9 / 25

Installation instruction

Step 1: Drill hole creation:

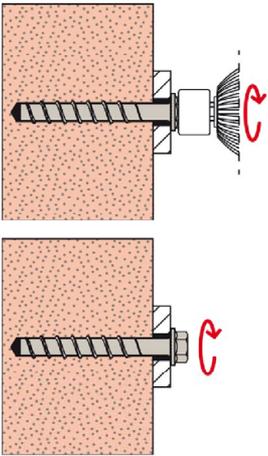

Drill the borehole using a standard hammer drill or a hollow drill. The joint, spacing and edge distances specified by the planner must be considered.

When using a standard hammer drill, after reaching the required drill hole depth, insert the drill bit at least 3 times to the bottom of the drill hole while the machine is running and pull it out of the drill hole again ("ventilate" the drill hole).

Drill hole diameter d_0 and drill hole depth h_1 according to Table B3.1.

Drilling method (hammer drilling / rotary drilling) according to specifications in Annex C.

Step 2: Installation:

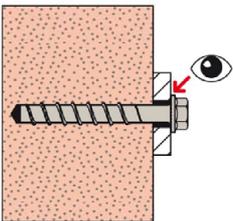

The screws may be installed using cordless screwdrivers, socket wrenches, screwdrivers and other standard screwdriving tools. The tightening torque applied after complete installation must not exceed the maximum installation torque (max T_{inst} according to Annex C).

Alternative: The screws may be installed with any tangential impact screw driver up to the maximum specified device torque $T_{imp,max}$ as specified in Annex C.

Recommended tangential impact screw driver: FSS 18V 400 BL according to Annex B 8 at a suitable power level as specified in Annex C.

Step 3: Check for correct installation:

After installation further turning of the screw must not be possible. The maximum installation torque (max T_{inst} according to Annex C) must not be exceeded during checking.

The screw head must rest on the attachment part and must not be damaged.

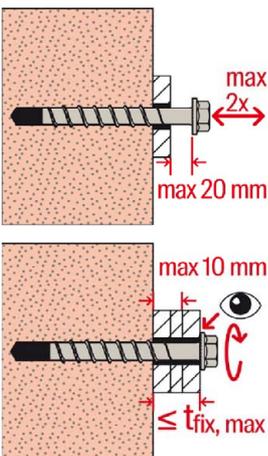

Adjustment:

Optional:

The screw may be adjusted according to Annex B 4.

In the case of adjustment, the screw may be unscrewed by a maximum of $L_{adj} = 20\text{mm}$.

The maximum shimming $t_{adj} = 10\text{mm}$ must not be exceeded.

Annex B 5
Appendix 10 / 25

Possible installation positions for joint width > 3 mm

For joint widths >3 mm, the distances c_J must be observed.

(Figures not to scale)

- c_{min} = minimum edge distance to free edge of the wall
- c_{jII} = distance to vertical joints without influence on resistance of the screw anchor
- $c_{j\perp}$ = distance to horizontal joints without influence on resistance of the screw anchor
- s_{minII} = minimum spacing parallel to the horizontal joint
- $s_{min\perp}$ = minimum spacing perpendicular to the horizontal joint
- c_{cr} = edge distance for ensuring the transmission of the charact. resistance of a single screw anchor
- s_{crII} = characteristic spacing parallel to the horizontal joint
- $s_{cr\perp}$ = characteristic spacing perpendicular to the horizontal joint
- l_{unit} = length of the masonry unit
- h_{unit} = height of the masonry unit
- $\alpha_{g,N}$ = group factor under tension load ($\alpha_{g,N} = \alpha_{g,N}(s_{minII}) = \alpha_{g,N}(s_{min\perp})$)
- $\alpha_{g,VII}$ = group factor under shear load parallel to the edge ($\alpha_{g,VII} = \alpha_{g,VII}(s_{minII}) = \alpha_{g,VII}(s_{min\perp})$)
- $\alpha_{g,V\perp}$ = group factor under shear load perpendicular to the edge ($\alpha_{g,V\perp} = \alpha_{g,V\perp}(s_{minII}) = \alpha_{g,V\perp}(s_{min\perp})$)

$$N_{RK} = N_{RK,b} = N_{RK,p} = N_{RK,b,c} = N_{RK,p,c}$$

$$V_{RK,II} = V_{RK,b,II} = V_{RK,c,II}; \quad V_{RK,\perp} = V_{RK,b,\perp} = V_{RK,c,\perp}$$

$$\text{For } s \geq s_{cr}: \alpha_{g,N} = \alpha_{g,VII} = \alpha_{g,V\perp} = 2$$

For $s_{min} \leq s < s_{cr}$: $\alpha_{g,N}$; $\alpha_{g,VII}$; $\alpha_{g,V\perp}$ according to installation parameter of brick in Annex C

$$N_{RK}^{g} = \alpha_{g,N} \cdot N_{RK} \quad (\text{Group of 2 anchors})$$

$$V_{RK,II}^{g} = \alpha_{g,VII} \cdot V_{RK,II}; \quad V_{RK,\perp}^{g} = \alpha_{g,V\perp} \cdot V_{RK,\perp} \quad (\text{Group of 2 anchors})$$

$$N_{RK}^{g} = \alpha_{g,N}^2 \cdot N_{RK} \quad (\text{Group of 4 anchors})$$

$$V_{RK,II}^{g} = \alpha_{g,VII}^2 \cdot V_{RK,II}; \quad V_{RK,\perp}^{g} = \alpha_{g,V\perp}^2 \cdot V_{RK,\perp} \quad (\text{Group of 4 anchors})$$

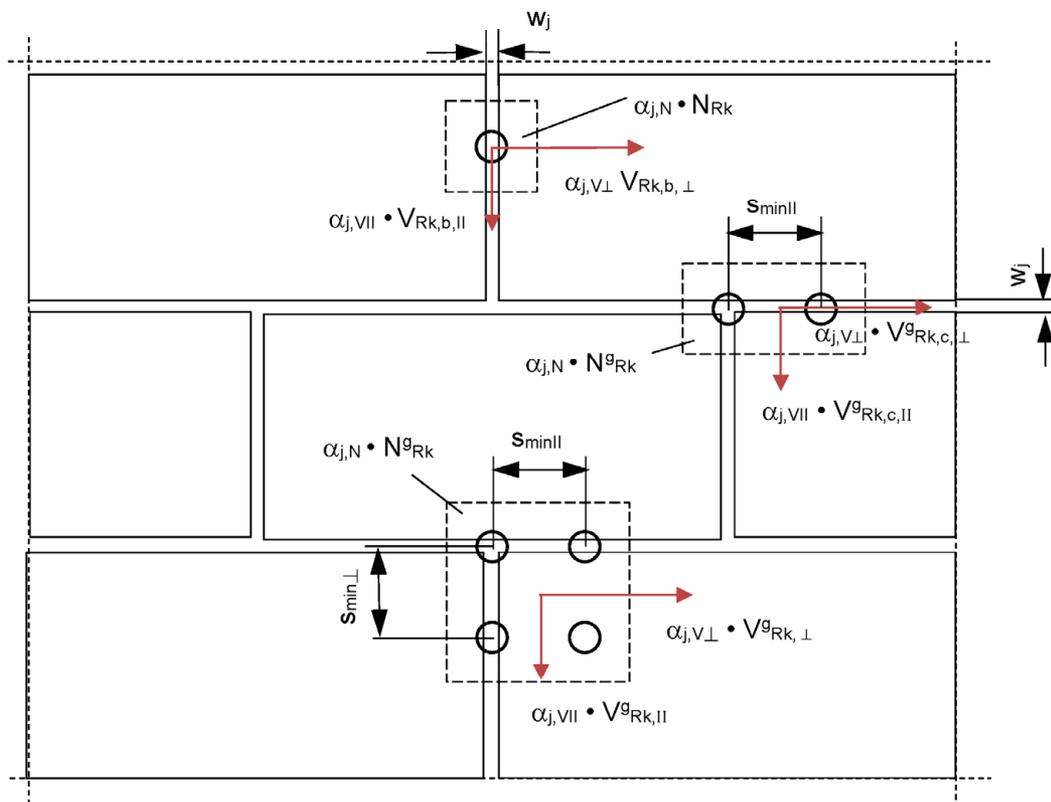

fischer concrete screw UltraCut FBS II, FBS II CP, FBS II R
for anchorage in masonry

Intended use
Possible installation positions for joint width > 3 mm

Annex B 6
Appendix 11 / 25

Possible installation positions for joint width ≤ 3 mm

The joint factors on this page, α_j in accordance with Annex C and the group factors of Annex B 6 must be taken into account.

(Figures not to scale)

- w_j = maximum permissible joint width for applications below c_{jII} , $c_{j⊥}$; the joint in which the screw is screwed in applies, in the case of cross joints, the less favorable applies
- c_{jII} = distance to vertical joints without influence on resistance of the screw anchor
- $c_{j⊥}$ = distance to horizontal joints without influence on resistance of the screw anchor
- $\alpha_{j,N}$ = reduction factor under tension load for screw anchors influenced by joints
- $\alpha_{j,VII}$ = reduction factor under shear load parallel to the vertical joint for screw anchors influenced by joints
- $\alpha_{j,V⊥}$ = reduction factor under shear load perpendicular to the vertical joint for screw anchors influenced by joints

$$N_{RK} = N_{RK,b} = N_{RK,p} = N_{RK,b,c} = N_{RK,p,c}$$

$$V_{RK,II} = V_{RK,b,II} = V_{RK,c,II}; \quad V_{RK,⊥} = V_{RK,b,⊥} = V_{RK,c,⊥}$$

For setting positions with joint spacing $c < c_{jII}$, $c_{j⊥}$ and $w_j \leq 3$ mm:

$$\begin{aligned} N^j_{RK} &= \alpha_{j,N} \cdot N_{RK} && \text{(Single anchor)} \\ V^j_{RK,II} &= \alpha_{j,VII} \cdot V_{RK,II}; \quad V^j_{RK,⊥} = \alpha_{j,V⊥} \cdot V_{RK,⊥} && \text{(Single anchor)} \\ N^g_{RK} &= \alpha_{j,N} \cdot N^g_{RK} && \text{(Group of anchors)} \\ V^g_{RK,II} &= \alpha_{j,VII} \cdot V^g_{RK,II}; \quad V^g_{RK,⊥} = \alpha_{j,V⊥} \cdot V^g_{RK,⊥} && \text{(Group of anchors)} \end{aligned}$$

Table C3.1: Characteristic resistance to pull-out failure or brick breakout failure of a single anchor under tension loading

| Size | 6 | 8 | 10 | |
|--|--------------|---|-----|-----|
| Characteristic tension resistance depending on the mean compressive strength of the brick | | | | |
| Mean compressive strength/ Min. compressive strength single brick ¹⁾ [N/mm ²] | Use category | $N_{RK} = N_{RK,p} = N_{RK,b} = N_{RK,p,c} = N_{RK,b,c}$ [kN] | | |
| ≥ 15/12 | wet | 1,3 | 1,1 | 1,1 |
| | dry | 1,9 | 1,6 | 1,4 |
| ≥ 20/16 | wet | 1,6 | 1,3 | 1,3 |
| | dry | 2,1 | 1,9 | 1,6 |
| ≥ 22/17,5 | wet | 1,6 | 1,3 | 1,4 |
| | dry | 2,3 | 2,0 | 1,7 |

¹⁾ The compressive strength of the single brick must not be less than 80% of the mean compressive strength.

Table C3.2: Characteristic resistance to local brick failure or brick edge failure of a single anchor under shear loading

| Size | 6 | 8 | 10 | | | | |
|--|--------------|---------------------|--------------------|---------------------|--------------------|---------------------|--------------------|
| Characteristic shear resistance depending on the mean compressive strength of the brick | | | | | | | |
| Mean compressive strength/ Min. compressive strength single brick ¹⁾ [N/mm ²] | Use category | $V_{RK, }$ [kN] | $V_{RK,⊥}$ [kN] | $V_{RK, }$ [kN] | $V_{RK,⊥}$ [kN] | $V_{RK, }$ [kN] | $V_{RK,⊥}$ [kN] |
| ≥ 15/12 | wet or dry | 1,2 | 0,8 | 4,8 | 1,4 | 4,4 | 2,5 |
| ≥ 20/16 | wet or dry | 1,4 | 1,0 | 5,6 | 1,7 | 5,1 | 2,9 |
| ≥ 22/17,5 | wet or dry | 1,4 | 1,0 | 5,8 | 1,7 | 5,3 | 3,0 |

¹⁾ The compressive strength of the single brick must not be less than 80% of the mean compressive strength.

Table C3.3: Displacements under tension and shear loads

| Size | 6 | 8 | 10 | |
|--|----------------------------|-----|------|-----|
| Displacement-factor under tension load | δ_{N0} -Factor | 0,1 | 0,15 | 0,2 |
| | $\delta_{N\infty}$ -Factor | 0,2 | 0,3 | 0,4 |
| Displacement-factor under shear load | δ_{V0} -Factor | 3,0 | 1,0 | 1,0 |
| | $\delta_{V\infty}$ -Factor | 4,5 | 1,5 | 1,5 |

Calculation of effective displacement:

$$\delta_{N0} = \delta_{N0}\text{-Factor} \times N \text{ [mm]}$$

$$\delta_{N\infty} = \delta_{N\infty}\text{-Factor} \times N \text{ [mm]}$$

N = Acting tension load

$$\delta_{V0} = \delta_{V0}\text{-Factor} \times V \text{ [mm]}$$

$$\delta_{V\infty} = \delta_{V\infty}\text{-Factor} \times V \text{ [mm]}$$

V = Acting shear load

| ≥ 15/12 | wet or dry | 1,8 | 0,8 | 2,3 | 1,5 | 3,1 | 1,0 |
| ≥ 20/16 | wet or dry | 2,1 | 0,9 | 2,6 | 1,7 | 3,5 | 1,2 |
| ≥ 25/20 | wet or dry | 2,3 | 1,0 | 2,9 | 1,9 | 3,9 | 1,3 |
| ≥ 28/22,5 | wet or dry | 2,4 | 1,0 | 3,0 | 2,0 | 4,1 | 1,4 |

¹⁾ The compressive strength of the single brick must not be less than 80% of the mean compressive strength.

Table C9.3: Displacements under tension and shear loads

| Size | 6 | 8 | 10 | |
|--|----------------------------|------|-----|------|
| Displacement-factor under tension load | δ_{N0} -Factor | 0,2 | 0,2 | 0,15 |
| | $\delta_{N\infty}$ -Factor | 0,4 | 0,4 | 0,3 |
| Displacement-factor under shear load | δ_{V0} -Factor | 4,5 | 2,0 | 1,25 |
| | $\delta_{V\infty}$ -Factor | 6,75 | 3,0 | 1,88 |

Calculation of effective displacement:

$$\delta_{N0} = \delta_{N0}\text{-Factor} \times N \text{ [mm]}$$

$$\delta_{V0} = \delta_{V0}\text{-Factor} \times V \text{ [mm]}$$

$$\delta_{N\infty} = \delta_{N\infty}\text{-Factor} \times N \text{ [mm]}$$

$$\delta_{V\infty} = \delta_{V\infty}\text{-Factor} \times V \text{ [mm]}$$

N = Acting tension load

V = Acting shear load

fischer concrete screw UltraCut FBS II, FBS II CP, FBS II R
for anchoring in the masonry

Performance

Solid brick KS NF, characteristic resistance under tension and shear loading, displacements

Table C10.1: Characteristic resistance of a single anchor under fire exposure

| Size | | 6 | 8 | 10 | |
|---|----------------------|------------------|--------------------|-----|-----|
| Characteristic resistance to steel failure under tension loading and shear loading under fire exposure | | | | | |
| $N_{Rk,s,fi} = V_{Rk,s,fi}$ | [kN] | R30 | 0,6 | 1,1 | 1,8 |
| | | R60 | 0,5 | 0,9 | 1,5 |
| | | R90 | 0,4 | 0,7 | 1,1 |
| | | R120 | 0,3 | 0,5 | 1,0 |
| Characteristic Bending moment under fire exposure $M^0_{Rk,s,fi}$ | | | | | |
| $M^0_{Rk,s,fi}$ | [Nm] | R30 | 0,6 | 1,5 | 3,1 |
| | | R60 | 0,5 | 1,2 | 2,6 |
| | | R90 | 0,4 | 1,0 | 2,0 |
| | | R120 | 0,3 | 0,8 | 1,7 |
| Characteristic resistance to pull-out failure and local brick failure under fire exposure | | | | | |
| Mean compressive strength/ Min. compressive strength single brick ¹⁾ | [N/mm ²] | | ≥ 15/12 | | |
| $N_{Rk,b,fi} = N_{Rk,p,fi}$ | [kN] | R30 | 1,3 | | |
| | | R60 | 1,2 | | |
| | | R90 | 1,1 | | |
| | | R120 | 1,0 | | |
| Min. edge distance | [mm] | $C_{min,fi}$ | $2 \times h_{nom}$ | | |
| Characteristic edge distance and spacing | | $C_{cr,fi}$ | $2 \times h_{nom}$ | | |
| | | $S_{cr,fi}$ | $4 \times h_{nom}$ | | |
| Distance to joints | | $C_{j \perp,fi}$ | ≥ 35 | | |
| | $C_{j \parallel,fi}$ | ≥ 40 | | | |

¹⁾ The compressive strength of the single brick must not be less than 80% of the mean compressive strength.

Table C10.2: Characteristic resistance of groups under fire exposure

| Size | | 6 | 8 | 10 | |
|--|------|--------------|--------------------------|--------------------------|--------------------------|
| Characteristic resistance to pull-out failure and local brick failure of groups under fire exposure | | | | | |
| $N^g_{Rk,fi} = N^g_{Rk,b,fi} = N^g_{Rk,p,fi}$ | [kN] | R30-R90 | $0,11 \times N^g_{Rk,b}$ | $0,14 \times N^g_{Rk,b}$ | $0,15 \times N^g_{Rk,b}$ |
| | | R120 | $0,09 \times N^g_{Rk,b}$ | $0,11 \times N^g_{Rk,b}$ | $0,12 \times N^g_{Rk,b}$ |
| Min. edge distance and spacing | [mm] | $C_{min,fi}$ | $2 \times h_{nom}$ | | |
| | | $S_{min,fi}$ | 107 | | |

Application in the joint or near the joint according to Table C8.3, is not permitted under fire exposure.

Hollow brick KSL, 3DF, EN 771-2:2011+A1:2015

Table C12.1: Characteristic resistance to pull-out failure or brick breakout failure of a single anchor under tension loading

| Size | 6 | 8 | 10 | |
|--|--------------|---|-----|-----|
| Characteristic Tension resistance depending on the mean compressive strength of the brick | | | | |
| Mean compressive strength/ Min. compressive strength single brick ¹⁾ [N/mm ²] | Use category | $N_{RK} = N_{RK,p} = N_{RK,b} = N_{RK,p,c} = N_{RK,b,c}$ [kN] | | |
| ≥ 12/10 | wet | 0,3 | 0,8 | 0,8 |
| | dry | 0,3 | 0,9 | 0,8 |
| ≥ 15/12 | wet | 0,4 | 0,9 | 0,9 |
| | dry | 0,4 | 1,0 | 0,9 |
| ≥ 20/16 | wet | 0,5 | 1,2 | 1,2 |
| | dry | 0,5 | 1,3 | 1,2 |
| ≥ 22/17,5 | wet | 0,6 | 1,3 | 1,3 |
| | dry | 0,6 | 1,4 | 1,3 |

¹⁾ The compressive strength of the single brick must not be less than 80% of the mean compressive strength.

Table C12.2: Characteristic resistance to local brick failure or brick edge failure of a single anchor under shear loading

| Size | 6 | 8 | 10 | | | | |
|--|--------------|--------------------------|----------------------|--------------------------|----------------------|--------------------------|----------------------|
| Characteristic shear resistance depending on the mean compressive strength of the brick | | | | | | | |
| Mean compressive strength/ Min. compressive strength single brick ¹⁾ [N/mm ²] | Use category | $V_{RK, \parallel}$ [kN] | $V_{RK, \perp}$ [kN] | $V_{RK, \parallel}$ [kN] | $V_{RK, \perp}$ [kN] | $V_{RK, \parallel}$ [kN] | $V_{RK, \perp}$ [kN] |
| ≥ 12/10 | wet or dry | 2,8 | 1,6 | 2,3 | 1,8 | 2,7 | 1,3 |
| ≥ 15/12 | wet or dry | 3,3 | 1,9 | 3,6 | 2,0 | 4,3 | 2,0 |
| ≥ 20/16 | wet or dry | 4,1 | 2,3 | 4,9 | 2,3 | 5,8 | 2,7 |
| ≥ 22/17,5 | wet or dry | 4,4 | 2,5 | 5,2 | 2,4 | 6,2 | 2,9 |

Resistance to combined tension and shear loading (hollow and perforated bricks)

| | | | |
|-----------------------------|---|-----|-----|
| Limit value for interaction | X | [-] | 1,3 |
|-----------------------------|---|-----|-----|

¹⁾ The compressive strength of the single brick must not be less than 80% of the mean compressive strength.

Table C12.3: Displacements under tension and shear loads

| Size | 6 | 8 | 10 | |
|--|----------------------------|------|-----|-----|
| Displacement-factor under tension load | δ_{N0} -Factor | 0,2 | 0,2 | 0,3 |
| | $\delta_{N\infty}$ -Factor | 0,4 | 0,4 | 0,6 |
| Displacement-factor under shear load | δ_{V0} -Factor | 1,25 | 1,0 | 1,0 |
| | $\delta_{V\infty}$ -Factor | 1,88 | 1,5 | 1,5 |

Calculation of effective displacement:

$$\delta_{N0} = \delta_{N0}\text{-Factor} \times N \text{ [mm]}$$

$$\delta_{N\infty} = \delta_{N\infty}\text{-Factor} \times N \text{ [mm]}$$

N = Acting tension load

$$\delta_{V0} = \delta_{V0}\text{-Factor} \times V \text{ [mm]}$$

$$\delta_{V\infty} = \delta_{V\infty}\text{-Factor} \times V \text{ [mm]}$$

V = Acting shear load

fischer concrete screw UltraCut FBS II, FBS II CP, FBS II R for anchoring in the masonry
