NX7

NX7 series machine controller

Sysmac controller - NX7 series

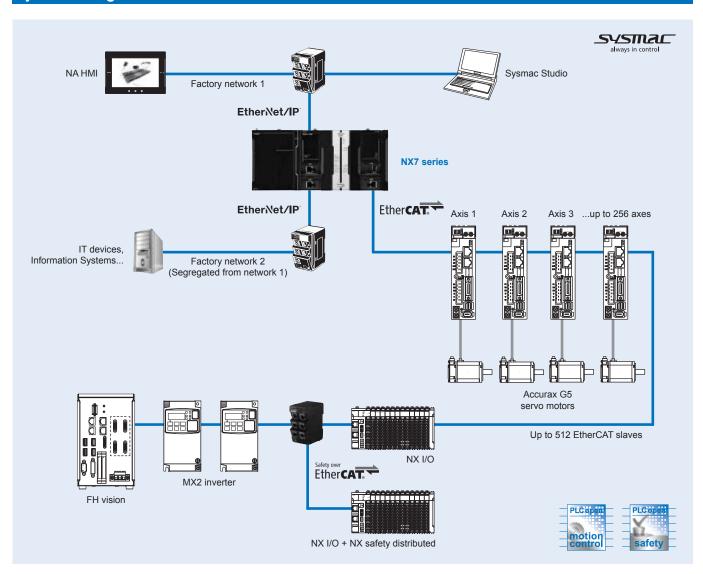

The NX7 series is a high performance machine controller that includes two synchronized motion cores controlling up to 256 axes.

Fastest cycle time: 125 µs
Number of axes: 256, 128
Two synchronized motion cores

- Functions: Logic sequence and Motion
- Multi-tasking
- Built-in EtherCAT and two EtherNet/IP (1 Gbps) ports
- Fully conforms to IEC 61131-3 standards
- · Certified PLCopen function blocks for motion control

System configuration

Specifications

General specifications

Item		NX7□ CPU Unit				
		Mounted in a panel				
Grounding		Less than 100 Ω				
CPU unit dimensions (H	× D × W)	100 mm × 100 mm × 132 mm				
Weight		880 g (including end cover)				
Power consumption		40 W (including SD Memory card and end cover)				
Operation environment	Ambient operating temperature	0 to 55°C				
	Ambient operating humidity	10% to 95% (with non condensation)				
	Atmosphere	Must be free from corrosive gases				
	Ambient storage temperature	-25 to 70°C (excluding battery)				
	Altitude	2,000 m or less				
	Pollution degree	2 or less: Conforms to JIS B3502 and IEC 61131-2.				
	Noise immunity	2 kV on power supply line (conforms to IEC 61000-4-4.)				
	Overvoltage category	Category II: Conforms to JIS B3502 and IEC 61131-2				
	EMC immunity level	Zone B				
	Vibration resistance	Conforms to IEC 60068-2-6 5 to 8.4 Hz with 3.5 mm amplitude, 8.4 to 150 Hz. Acceleration of 9.8 m/s ² for 100 min in X, Y and Z directions (10 sweeps of 10 min each = 100 min total)				
		Conforms to IEC 60068-2-27 147 m/s ² , 3 times in X, Y and Z directions (100 m/s ² for relay output units)				
Battery	Life	2.5 years (at 25°C, power ON time rate 0% (power OFF))				
	Model	CJ1W-BAT01				
Applicable standards		Conforms to cULus, EC directives, RCM and KC registration.

				At ambient temperature of 25 C. –1.5 to +1.5 min error per month At ambient temperature of 0°C: –3 to +1 min error per month

¹ This is the capacity for the execution objects and variable tables (including variable names).

2 This is the total number of axes that are set as servo axes or encoder axes and are also set as used axes.

3 This is the total for all axis types.

4 Data is updated on the line in the specified interval regardless of the number of nodes.

5 Means packets per second, i.e., the number of communication packets that can be sent or received in one second.

6 An IGMP client is mounted for the EtherNet/IP port. If an Ethernet switch that supports IGMP snooping is used, filtering of unnecessary multicast packets is performed. formed.

Function specifications

Item				NX7□ CPU Unit			
Tasks	Function	Function		I/O refreshing and the user program are executed in units that are called tasks.			
		Periodically ex	acuted tacks	Tasks are used to specify execution conditions and execution priority. Maximum number of primary periodic tasks: 1 Maximum number of periodic tasks: 4			
		Periodically ex	ecuted tasks				
		Conditionally e	xecuted tasks	Maximum number of even tasks: 32			
		_		When active even task instruction is executed or when condition expression for variable is met			
Programming	POUs	Programs		POUs that are assigned to tasks.			
	(program organization	Function block	S	POUs that are used to create objects with specific conditions.			
	units)	Functions		POUs that are used to create an object that determine unique outputs for the inputs, such as for data processing.			
	Programming	Types		Ladder diagrams ⁻¹ and structured text (ST).			
	languages	71		()			
	Namespaces			A concept that is used to group identifiers for POU definitions.			
	Variables External access of variab			Network variables (the function which allows access from the HMI, host computers or other controllers)			
	Data types	Basic data type	26	BOOL, BYTE, WORD, DWORD, LWORD, INT, SINT, DINT, LINT, UINT, USINT, UDINT,			
	Data types	Basic data type		ULINT, REAL, LREAL, TIME (durations), DATE, TIME_OF_DAY, DATE_AND_TIME and			
				STRING (text strings)			
		Derivative data	, * '	Structures, unions, enumerations			
		Structures	Function	A derivative data type that groups together data with different variable types. Number of members: 2,048 max.			
				Nesting levels: 8 max.			
			Member data	Basic data types, structures, unions, enumerations, array variables			
			types				
			Specifying member offsets	You can use member offsets to place structure members at any memory locations.			
		Unions	Function	A derivative data type that groups together data with different variable types.			
		Onions	i dilotion	Number of members: 4 max.			
			Member data	BOOL, BYTE, WORD, DWORD and LWORD.			
			types				
	D. I	Enumerations	Function	A derivative data type that uses text strings called enumerators to express variable values.			
	Data type attributes	Array specifications	Function	An array is a group of elements with the same data type. You specify the number (subscript) of the element from the first element to specify the element.			
	attributes	оросписатопо		Number of dimensions: 3 max.			
				Number of elements: 65,535 max.			
			Array specifications	Supported.			
			for FB instances				
		Range specific		You can specify a range for a data type in advance. The data type can take only values that			
				are in the specified range.			
	Libraries			User libraries.			
Motion control				Position control, velocity control, torque control			
	Axis types	can be managed		Servo axes, virtual servo axes, encoder axes and virtual encoder axes Command positions and actual positions			
	Single-axis	Single-axis	Absolute	Positioning is performed for a target position that is specified with an absolute value.			
	3	position contol	positioning	g a para tana ga para tana a tana			
			Relative	Positioning is performed for a specified travel distance from the command current position.			
			positioning	Desitioning is newfarmed for a position travel distance from the position where an intervent			
			Interrupt feeding	Positioning is performed for a specified travel distance from the position where an interrupt input was received from an external input.			
			Cyclic synchro-	The function which output command positions in every control period in the position control			
			nous absolute	mode.			
		0:1:	positioning				
		Single-axis velocity	Velocity control Cyclic	Velocity control is performed in position control mode. A velocity command is output each control period in the velocity control mode.			
		control	synchronous	A versory command is output each control period in the velocity control mode.			
			velocity control				
		Single-axis	Torque control	The torque of the motor is controlled.			
		torque control Single-axis	Starting cam	A cam motion is performed using the specified cam table.			
		synchronized	operation	no cam monorms performed using the specified cam table.			
	1	control	Ending cam	The cam motion for the axis that is specified with the input parameter is ended.			
		00.74101		1			
			operation				
			operation Starting gear	A gear motion with the specified gear ratio is performed between a master axis and slave axis

			operation Starting gear operation Positioning gear operation Ending gear operation	A gear motion with the specified gear ratio and sync position is performed between a master axis and slave axis. The specified gear motion or positioning gear motion is ended.			
			operation Starting gear operation Positioning gear operation Ending gear operation Synchronous	A gear motion with the specified gear ratio and sync position is performed between a master axis and slave axis.			
			operation Starting gear operation Positioning gear operation Ending gear operation Synchronous positioning	A gear motion with the specified gear ratio and sync position is performed between a master axis and slave axis. The specified gear motion or positioning gear motion is ended. Positioning is performed in sync with a specified master axis.			
			operation Starting gear operation Positioning gear operation Ending gear operation Synchronous	A gear motion with the specified gear ratio and sync position is performed between a master axis and slave axis. The specified gear motion or positioning gear motion is ended.			
			operation Starting gear operation Positioning gear operation Ending gear operation Synchronous positioning Master axis	A gear motion with the specified gear ratio and sync position is performed between a master axis and slave axis. The specified gear motion or positioning gear motion is ended. Positioning is performed in sync with a specified master axis. The phase of a master axis in synchronized control is shifted. The command positions of two axes are added or subtracted and the result is output as the			
			operation Starting gear operation Positioning gear operation Ending gear operation Synchronous positioning Master axis phase shift Combining axes	A gear motion with the specified gear ratio and sync position is performed between a master axis and slave axis. The specified gear motion or positioning gear motion is ended. Positioning is performed in sync with a specified master axis. The phase of a master axis in synchronized control is shifted. The command positions of two axes are added or subtracted and the result is output as the command position.			
		Single-axis	operation Starting gear operation Positioning gear operation Ending gear operation Synchronous positioning Master axis phase shift Combining axes Powering the	A gear motion with the specified gear ratio and sync position is performed between a master axis and slave axis. The specified gear motion or positioning gear motion is ended. Positioning is performed in sync with a specified master axis. The phase of a master axis in synchronized control is shifted. The command positions of two axes are added or subtracted and the result is output as the			
		Single-axis manual operation	operation Starting gear operation Positioning gear operation Ending gear operation Synchronous positioning Master axis phase shift Combining axes	The specified gear motion or positioning gear motion is ended. Positioning is performed in sync with a specified master axis. The phase of a master axis in synchronized control is shifted. The command positions of two axes are added or subtracted and the result is output as the command position.			

42 Machine automation controller

Item				NX7□ CPU Unit
Motion control	Single-axis	Auxiliary	Resetting axis	Axes errors are cleared.
		functions for single-axis control	errors Homing	A motor is operated and the limit signals, home proximity signal, and home signal are used to define home.
			Homing with parameter	Specifying the parameter, a motor is operated and the limit signals, home proximity signal and home signal are used to define home.
			High-speed homing	Positioning is performed for an absolute target position of 0 to return to home.
			Stopping	An axis is decelerated to a stop at the specified rate.
			Immediately stopping	An axis is stopped immediately.
			Override factors	<u> </u>
			Changing the current position	The command current position or actual current position of an axis can be changed to any position.
			Enabling external latches	The position of an axis is recorded when a trigger occurs.
			Disabling external latches	The current latch is disabled.
			Zone monitoring	specified range (zone).
			Enabling digital cam switches	You can turn a digital output ON and OFF according to the position of an axis.
			Monitoring axis following error	You can monitor whether the difference between the command positions or actual positions of two specified axes exceeds a threshold value.
			Resetting the following error	The error between the command current position and actual current position is set to 0.
			Torque limit	The torque control function of the servo drive can be enabled or disabled and the torque limits can be set to control the output torque.
			Position compensation	The function which compensate the position for the axis in operation.
			Start velocity	You can set the initial velocity when axis motion starts.
	Axes groups	Multi-axes coordinated control	Absolute linear interpolation	Linear interpolation is performed to a specified absolute position.
			Relative linear interpolation	Linear interpolation is performed to a specified relative position.
			Circular 2D interpolation	Circular interpolation is performed for two axes.
			Axes group cyclic synchro- nous absolute positioning	A positioning command is output each control period in Position control mode.
		Auxiliary functions for multi-axes coordinated control	Resetting axes group errors	Axes group errors and axis errors are cleared.
			Enabling axes groups	Motion of an axes group is enabled.
			Disabling axes groups	Motion of an axes group is disabled.
			Stopping axes groups	All axes in interpolated motion are decelerated to a stop.
			Immediately stopping axes groups	All axes in interpolated motion are stopped immediately.
			Setting axes group override factors	The blended target velocity is changed during interpolated motion.
			Reading axes group positions	The command current positions and actual current positions of an axes group can be read.
			Changing the axes in a group	The composition axes parameter in the axes group parameters can be overwritten temporarily.
	Common items	Cams	Setting cam table properties	The end point index of the cam table that is specified in the input parameter is changed.
			Saving cam tables	The cam table that is specified with the input parameter is saved in non-volatile memory in the CPU unit.
			Generating cam tables	The cam table that is specified with the input parameter is generated from the cam property and cam mode.
		Parameters	Writing MC settings	Some of the axis parameters or axes group parameters are overwritten temporarily.
			Changing axis parameters	You can access and change the axis parameters from the user program.

			NX7□ CPU Unit		
	Count modes		You can select either linear mode (finite length) or rotary mode (infinite length).		
functions	Unit conversion	ns	You can set the display unit for each axis according to the machine.		
	Acceleration/ deceleration control	Automatic acceleration/ deceleration control	Jerk is set for the acceleration/deceleration curve for an axis motion or axes group motion.		
		acceleration and deceleration rates	You can change the acceleration or deceleration rate even during acceleration or deceleration.		
	•	ck	You can set an in-position range and in-position check time to confirm when positioning is completed.		
İ			You can set the stop method to the immediate stop input signal or limit input signal.		
		f motion control	You can change the input variables for a motion control instruction during execution and execute the instruction again to change the target values during operation.		
	Multi-execution control instruct		You can specify when to start execution and how to connect the velocities between operations when another motion control instruction is executed during operation.		
	Continuous axe		You can specify the transition mode for multi-execution of instructions for axes group operation.		
	Monitoring functions	Software limits Following error	Software limits are set for each axis. The error between the command current value and the actual current value is monitored for an axis.		
		Velocity, accel- eration/decelera-	axis. You can set warning values for each axis and each axes group.		
		tion rate, torque, interpolation velocity and interpolation acceleration/de- celeration rate			
	Absolute encod		You can use an OMRON Accurax-G5 series servomotor with an absolute encoder to eliminate		
	Input signal log	ic inversion	the need to perform homing at startup. You can inverse the logic of immediate stop input signal, positive limit input signal, negative limit input signal or home proximity input signal.		
External interfac	xternal interface signals		The servo drive input signals listed on below are used. Home signal, home proximity signal, positive limit signal, negative limit signal, immediate stop signal and interrupt input signal.		
EtherCAT slaves	Number of slav	es	512 max.		
	3 port		A port for communications with various kinds of support software running on a personal computer.		
			TCP/IP, UDP/IP		
port	cations service	Message	Programless cyclic data exchange is performed with the devices on the EtherNet/IP network. CIP commands are sent to or received from the devices on the EtherNet/IP network.		
	TCP/IP applications	Socket services FTP client	Data is sent to and received from any node on EtherNet using the UDP or TCP protocol. Socket communications instructions are used. File can be read from or written to computers to other Ethernet nodes from the CPU unit. FTP client communications instructions are used.		
		FTP server	Files can be read from or written to the SD memory card in the CPU unit from computers at other Ethernet nodes.		
		Automatic clock adjustment	Clock information is read from the NTP server at the specified time or at specified interval after the power supply to the CPU unit is turned ON. The internal clock time in the CPU unit is updated with the read time.		
Ethor CAT more	Cummonted	SNMP agent	Built-in EtherNet/IP port internal status information is provided to network management software that uses an SNMP manager.		
EulerCAT port	services	communications	Control information is exchanged in cyclic communications between the EtherCAT master and slaves. A communication method to exchange control information in noncyclic event communications		
	Network scanni	communications	between the EtherCAT master and slaves. This communications method is defined by CoE. Information is read from connected slave devices and the slave configuration is automatically		
	DC (distributed	clock)	generated. Time is synchronized by sharing the EtherCAT system time between all EtherCAT devices		
	Packet monitor	ing	(including the master). The frames that are sent by the master and the frames that are received by the master can be saved. The data that is saved can be viewed with WireShark or other applications.		
	Enable/disable slaves	settings for	The slaves can be enabled or disabled as communications targets.		
	slaves		SDO messages of the CAN application can be sent to slaves via EtherCAT.		
	Supported CoE application protocol		SDO messages that conform to the CANopen standard can be sent to slaves via EtherCAT.		
			The following instructions are supported: CIP communications instructions, socket communications instructions, SDO message instructions and FTP client instructions.		
RUN output con	tacts		The output on the power supply unit turns ON in RUN mode.		
Event logs	Function		Events are recorded in the logs.		
		nts per event log	System event log: 2,048 max.		
	External interface EtherCAT slaves Peripheral USB EtherNet/IP port EtherCAT port Communication RUN output con	functions Unit conversion Acceleration Acceleration deceleration Control	functions Unit conversions

		Protection	Backing up data to the SD memory card	Prohibit SD memory card backup functions.		
	Sysmac Studio	controller backu		Backup, restore and verification operations for units can be performed from the Sysmac Stud		

^{*1} Inline ST is supported (Inline ST is ST that is written as an element in a ladder diagram).

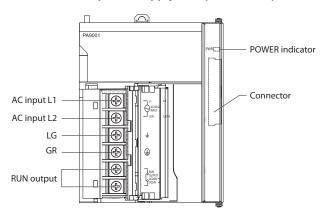

Nomenclature

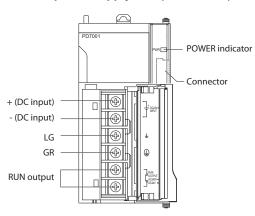

NX7 CPU unit

100 to 240 VAC power supply unit (NX-PA9001)

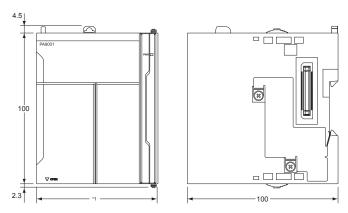

24 VDC power supply unit (NX-PD7001)

46

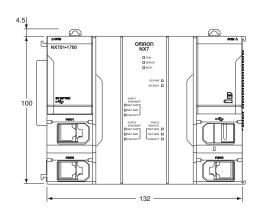

Dimensions

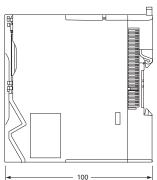

Power supply unit (NX-PA9001/PD7001)

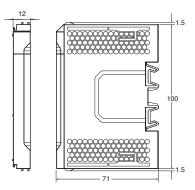

Note: 1. This dimension depends on the selected power supply unit:
- 51 mm: NX-PD7001
- 80 mm: NX-PA9001

NX7 CPU unit

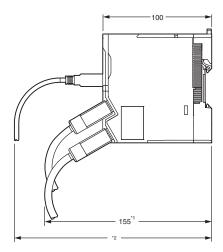

End cover (NX-END01)

Mounting height

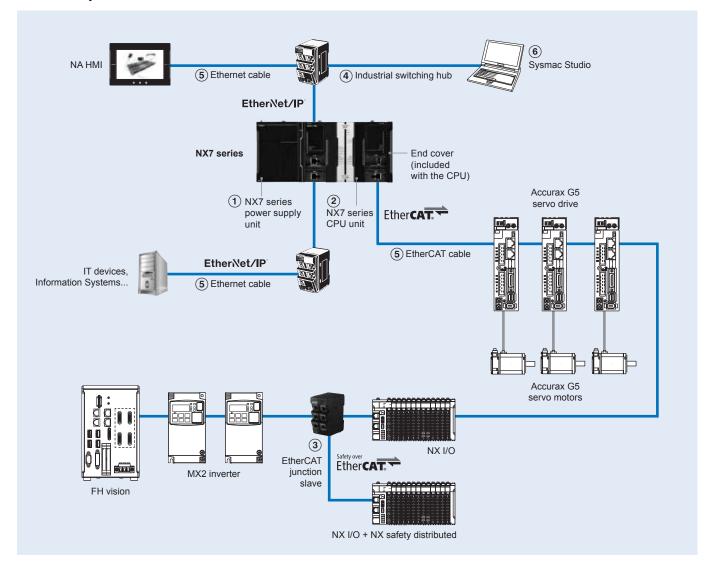

Note: 1. This is the dimension from the back of the unit to the communication cables:

- 155 mm: When an XS6G-T421-1 connector is used.
- 2. This dimension depends on the specifications of the commercially available USB cable.

Ordering information

NX7 series system

	Ethernet installation cable	Cat 5, SF/UTP, $4 \times 2 \times$ AWG 24/1 (solid core), Polyurethane (PUR) Cat 5, SF/UTP, $4 \times 2 \times$ AWG 26/7 (stranded core), Polyurethane (PUR)		Weidmüller	Green	100	WM IE-5IC4x2xAWG24/1-PUR
					Green	100	WM IE-5IC4x2xAWG26/7-PUR
	Connectors	RJ45 metallic connector For AWG22 to AWG26	P		_	_	WM IE-T0-RJ45-FH-BK
		RJ45 plastic connector For AWG22 to AWG24		OMRON	_	_	XS6G-T421-1
	RJ45 socket	DIN-rail mount socket to termir cabinet	Weidmüller	_	_	WM IE-T0-RJ45-FJ-B	

The lineup features low smoke zero halogen cables for in-cabinet use and PUR cables for out-of-cabinet use.

Note: Please be careful while cable processing, for EtherCAT, connectors on both ends should be shield connected and for EtherNet/IP, connectors on only one end should be shield connected.

WE70 FA wireless LAN units

Name	Area	Туре	Model	Appearance
WE70 FA wireless LAN units	Europe	Access point (Master)	WE70-AP-EU	
		Client (Slave)	WE70-CL-EU	l i i _
Directional magnetic-base antenna		1 set with two antennas, 2.4 GHz/5 GHz Dual-band compatible	WE70-AT001H	
DIN rail mounting bracket		For TH35 7.5	WT30-FT001	
		For TH35 15	WT30-FT002	278
Antenna extension cable		5 m	WE70-CA5M	

Note: Special versions are available for USA, Canada, China and Japan.

Accessories

Specifications		Model	Appearance
SD memory card	2 GB	HMC-SD291	CONNCCO MACC-SCOOT

Computer software

Symbol	Specifications	Model
6	Sysmac Studio version 1.13 or higher	SYSMAC-SE2

^{*1} Refer to the Sysmac Studio datasheet (Cat. No. SysCat_I181E) for detailed information or contact your OMRON representative.

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.

To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.

Cat. No. SysCat_I186E-EN-01B In the interest of product improvement, specifications are subject to change without notice.
