#### EtherCAT® Remote I/O Terminals

# **GX-Series**

CSM GX DS F 9 15

# Realizes high-speed communication to match a variety of applications

#### • Digital I/O Terminals

Inputs/Outputs the digital ON/OFF signals.

#### Analog I/O Terminals

Inputs/Outputs the analog signal of 0-5V or 4-20mA, etc., and executes A/D or D/A conversion.

#### Encoder Input Terminal

Performs conversion for pulse input signals from an encoder.

#### • Expansion Units

Attached to the Digital I/O Unit to expands the I/O points. Can be attached to a two-tier terminal block type with 16 inputs, 16 outputs, and 16 relay outputs.

#### **General Specifications**

It is common specifications of Digital I/O Terminal, Analog I/O Terminal and Encoder Input Terminal GX-Series. Refer to the pages of specifications for individual I/O terminals for details.

For General Specification of IO-Link Master Unit(GX-ILM08C), refer to page 31.

Item	Specification
Unit power supply voltage	20.4 to 26.4 VDC (24 VDC –15% to +10%)
I/O power supply voltage	20.4 to 26.4 VDC (24 VDC –15% to +10%)
Noise resistance	Conforms to IEC 61000-4-4, 2 kV (power line)
Vibration resistance	10 to 60 Hz with amplitude of 0.7 mm, 60 to 150Hz and 50 m/s² in X, Y, and Z directions for 80 minutes <relay gx-oc1601="" only="" output="" unit=""> 10 to 55 Hz with double-amplitude of 0.7 mm X, Y, and Z directions for 80 minutes</relay>
Impact resistance	150 m/s² with amplitude of 0.7 mm <relay gx-oc1601="" only="" output="" unit=""> 100 m/s² (3 times each in 6 directions on 3 axes)</relay>
Dielectric strength	600 VAC (between isolated circuits)
Isolation resistance	20 MΩ or more (between isolated circuits)
Ambient operating temperature	−10 to 55 °C
Operating humidity	25% to 85% (with no condensation)
Operating atmosphere	No corrosive gases
Storage temperature	–25 to 65 °C
Storage humidity	25% to 85% (with no condensation)
Terminal block screws tightening torque *	M3 wiring screws: 0.5 N•m M3 terminal block mounting screws: 0.5 N•m
Mounting method	35-mm DIN track mounting

<sup>\*</sup> Applicable only to 2-tier terminal block and 3-tier terminal block type slaves.

Sysmac is a trademark or registered trademark of OMRON Corporation in Japan and other countries for OMRON factory automation products. EtherCAT® is a registered trademark of Beckhoff Automation GmbH for their patented technology. EtherNet/IP<sup>TM</sup> is the trademarks of ODVA.

## **EtherCAT Communications Specifications**

#### Communications Specifications of GX-Series EtherCAT Remote I/O Terminal

Item	Specification
Communication protocol	Dedicated protocol for EtherCAT
Modulation	Base band
Baud rate	100 Mbps
Physical layer	100BASE-TX (IEEE802.3)
Connectors	RJ45 shielded connector × 2 CN IN: EtherCAT input CN OUT: EtherCAT output
Topology	Daisy chain
Communications media	Category 5 or higher (cable with double, aluminum tape and braided shielding is recommended.)
Communications distance	Distance between nodes (slaves): 100 m max.
Noise resistance	Conforms to IEC 61000-4-4, 1 kV or higher
Node address setting method	Set with decimal rotary switch or Sysmac Studio
Node address range	1 to 99: Set with rotary switch 1 to 65535: Set with Sysmac Studio
LED display	PWR × 1 L/A IN (Link/Activity IN) × 1 L/A OUT (Link/Activity OUT) × 1 RUN × 1 ERR × 1
Process data	Fixed PDO mapping
PDO size/node	2 bit to 256 byte
Mailbox	Emergency messages, SDO requests, SDO responses, and SDO information
SYNCHRONIZATION mode	Digital I/O Slave Unit and Analog I/O Slave Unit: Free Run mode (asynchronous) Encoder Input Slave Unit: DC mode 1

#### **Version Information**

Note: Refer to User's Manual for details on the functions that have been added or changed due to the unit version upgrade of the EtherCAT Slave Units.

## Digital I/O Terminal 2-tier Terminal Block Type

# GX-\( \Box \) D16\( \Box \) 1/OC1601

# High-speed digital I/O terminal with the screw type terminal block for EtherCAT communications

- Detachable screw terminal block facilitates the maintenance.
- The expansion unit can be connected.
   (One expansion unit per one I/O terminal unit.)
   Input/output point can be flexibly increased depending on the system.
- Input response time can be switched for high-speed processing.
- Selectable node address setting methods: setting with rotary switch and with tool software.
- When setting the nodes with rotary switch, setting is easy and node identification becomes possible for maintenance.

### **Expansion Units**

One Expansion Unit can be combined with one Digital I/O Terminal (GX-ID16 $\Box$ 1/OD16 $\Box$ 1/OC1601). The following Expansion Units are available. They can be combined in various ways for flexible I/O capacity expansion.

Model	I/O points	Input capacity	Output capacity
XWT-ID08	8 DC inputs (NPN)	8	0
XWT-ID08-1	8 DC inputs (PNP)	8	0
XWT-OD08	8 transistor outputs (NPN)	0	8
XWT-OD08-1	8 transistor outputs (PNP)	0	8
XWT-ID16	16 DC inputs (NPN)	16	0
XWT-ID16-1	16 DC inputs (PNP)	16	0
XWT-OD16	16 transistor outputs (NPN)	0	16
XWT-OD16-1	16 transistor outputs (PNP)	0	16

#### **General Specifications**

For Common Specifications of I/O terminals, refer to page 1.

#### **Input Section Specifications**

#### **16-point Input Terminals**

Item	Specification			
item	GX-ID1611	GX-ID1621		
Input capacity	16 points			
Internal I/O common	NPN	PNP		
ON voltage	15 VDC min. (between each input terminal and the V terminal)	15 VDC min. (between each input terminal and the G terminal)		
OFF voltage	5 VDC max. (between each input terminal and the V terminal)	5 VDC max. (between each input terminal and the G terminal)		
OFF current	1.0 mA max.			
Input current	6.0 mA max./input (at 24-VDC) 3.0 mA min./input (at 17-VDC)			
ON delay	0.1 ms max.	0.1 ms max.		
OFF delay	0.2 ms max.			
Input filter value	Without filter, 0.5 ms, 1 ms, 2 ms, 4 ms, 8 ms, 16 ms, 32 ms (Default setting: 1 ms)			
Number of circuits per common	16 inputs/common			
Input indicators	LED display (yellow)			
Isolation method	Photocoupler isolation			
I/O power supply method	Supply by I/O power supply			
Unit power supply current consumption	90 mA max. (for 20.4 to 26.4-VDC power supply voltage)			
I/O power supply current consumption	5 mA max. (for 20.4 to 26.4-VDC power supply voltage)			
Weight	180 g max.			
Expansion functions	Enabled			
Short-circuit protection function	No			

Note: For the I/O power supply current value to V and G terminals, refer to GX Series Operation Manual (Cat. No. W488).

#### **Output Section Specifications**

#### **16-point Output Terminals**

Item	Specification	
item	GX-OD1611	GX-OD1621
Output capacity	16 points	
Rated current (ON current)	0.5 A/output, 4.0 A/o	common
Internal I/O common	NPN	PNP
Residual voltage	1.2 V max. (0.5 ADC, between each output termi- nal and the G ter- minal)	1.2 V max. (0.5 ADC, between each output termi- nal and the V termi- nal)
Leakage current	0.1 mA max.	
ON delay	0.5 ms max.	
OFF delay	1.5 ms max.	
Number of circuits per common	16 points/common	
Output indicators	LED display (yellow)	
Isolation method	Photocoupler isolation	
I/O power supply method	Supply by I/O power supply	
Unit power supply current consumption	90 mA max. (for 20.4 to 26.4-VDC power supply voltage)	
I/O power supply current consumption	5 mA max. (for 20.4 to 26.4-VDC power supply voltage)	
Weight	180 g max.	
Expansion functions	Enabled	
Output handling for communications errors	Select either hold or clear	
Short-circuit protection function No		
Note: For the I/O newer supply		and C tarminals

Note: For the I/O power supply current value to V and G terminals, refer to GX Series Operation Manual (Cat. No. W488).

#### **Relay 16-point Output Terminals**

Item	Specification
item	GX-OC1601
Output capacity	16 points
Mounted relays	DRTA-NY5W-K
Rated load	Resistance load 250 VAC 2 A/output, common 8 A 30 VDC 2 A/output, common 8 A
Rated ON current	3 A/output
Maximum contact voltage	250 VAC, 125 VDC
Maximum contact current	3 A/output
Maximum switching capacity	750 VAAC, 90 WDC
Minimum applicable load (reference value)	5 VDC 1mA
Mechanical service life	20,000,000 operations min.
Electrical service life	100,000 operations min.
Number of circuits per common	8 points/common
Output indicators	LED display (yellow)
Isolation method	Relay isolation
I/O power supply method	The relay drive power is supplied from the unit power supply.
Unit power supply current consumption	210 mA max. (for 20.4 to 26.4-VDC power supply voltage)
Weight	290 g max.
Expansion functions	Enabled
Output handling for communications errors	Select either hold or clear
Short-circuit protection function	No

#### **Precautions for Correct Use**

- With a current of between 2 and 3 A (8 to 10 A per common), either ensure that the number of points per common that simultaneously turn ON does not exceed 4 or ensure that the ambient temperature does not exceed 45 °C. Also, there are no restrictions if the current does not exceed 2 A (8 A per common).
- The rated current is the value for assuring normal operation, and not for assuring durability of the relays. The relay service life depends greatly on factors such as the operating temperature, the type of load, and switching conditions. The actual equipment must be checked under actual operating conditions.

**Note:** Wire colors have been changed according to revisions in the JIS standards for photoelectric and proximity sensors. The colors in parentheses are the wire colors prior to the revisions.

**Dimensions** (Unit: mm)

#### GX-OC1601

#### GX-MD1611/MD1621

## **Digital I/O Terminal 3-tier Terminal Block Type**

# GX-ID16□2/OD16□2/MD16□2

# A common terminal is provided for each contact.

# It eliminate the needs for relay terminal blocks

- It is unnecessary to share the common terminal among multiple contacts.
  - Easy-to-find wiring locations.
- Detachable screw terminal block facilitates the maintenance.
- Input response time can be switched for high-speed processing.
- Selectable node address setting methods: setting with rotary switch and with tool software.

When setting the nodes with rotary switch, setting is easy and node identification becomes possible for maintenance.

#### **General Specifications**

For Common Specifications of I/O terminals, refer to page 1.

## **Digital I/O Terminal e-CON Connector Type**

# GX-\\_D16\\_8/\\_D32\\_8

# Easy wiring using industry standard e-CON connectors. Special wiring tool is not necessary

- Digital I/O terminal with industry standard e-CON connectors.
- A common terminal is provided for each connector.

  The I/O terminal and the sensors can be connected directly.
- Input response time can be switched for high-speed processing.
- Selectable node address setting methods: setting with rotary switch and with tool software.

When setting the nodes with rotary switch, setting is easy and node identification becomes possible for maintenance.

## **Components and Functions**

#### 16 Inputs Terminal GX-ID1618/ID1628

No.	Name	Function
1	Communications connector	(CN IN) Connects the communications cable which comes from the Master Unit side. (CN OUT) Connects the communications cable of the next I/O terminal.
2	Unit Power Supply Connector	Connect the unit power supply (24 VDC).
3	Status indicator	It indicates the communication state and the operation state of I/O terminals.
4	Node address Switch	It sets node addresses of terminals (decimal). Setting range is 00 to 99.
5	Input indicator (0 to 15)	Indicates the state of input contact (ON/OFF).  Not lit: Contact OFF (input OFF state)  Lit in yellow: Contact ON (input ON state)
6	I/O connector (0 to 15)	Connects an external device.
7	DIN track mounting hook	Fixes a slave to a DIN track.

#### 16 Outputs Terminal GX-OD1618/OD1628

No.	Name	Function
1	Communications con- nector	(CN IN) Connects the communications cable which comes from the Master Unit side. (CN OUT) Connects the communications cable of the next I/O terminal.
2	Unit Power Supply Connector	Connect the unit power supply (24 VDC).
3	Status indicator	It indicates the communication state and the operation state of I/O terminals.
4	Node address Switch	It sets node addresses of terminals (decimal). Setting range is 00 to 99.
5	Output indicator (0 to 15)	Indicates the state of output contact (ON/OFF).  Not lit: Contact OFF (output OFF state)  Lit in yellow: Contact ON (output ON state)
6	I/O connector (0 to 15)	Connects an external device.
7	I/O power supply con- nector	Supplies the I/O power.
8	DIN track mounting hook	Fixes a slave to a DIN track.

#### 8 Inputs/8 Outputs Terminal GX-MD1618/MD1628

No.	Name	Function
1	Communications con- nector	(CN IN) Connects the communications cable which comes from the Master Unit side. (CN OUT) Connects the communications cable of the next I/O terminal.
2	Unit Power Supply Connector	Connect the unit power supply (24 VDC).
3	Status indicator	It indicates the communication state and the operation state of I/O terminals.
4	Node address Switch	It sets node addresses of terminals (decimal). Setting range is 00 to 99.
5	Input indicator (0 to 7)	Indicates the state of input contact (ON/OFF).  Not lit: Contact OFF (input OFF state)  Lit in yellow: Contact ON (input ON state)
6	Output indicator (0 to 7)	Indicates the state of output contact (ON/OFF).  Not lit: Contact OFF (output OFF state)  Lit in yellow: Contact ON (output ON state)
7	I/O connector (0 to 15)	Connects an external device. <top side=""> For input device  <bottom side=""> For output device</bottom></top>
8	I/O power supply con- nector	Supplies the I/O power. (For output device)
9	DIN track mounting hook	Fixes a slave to a DIN track.

#### 32 Inputs Terminal GX-ID3218/ID3228

No.	Name	Function	
1	Communications connector	(CN IN) Connects the communications cable which comes from the Master Unit side.  (CN OUT) Connects the communications cable of the next I/O terminal.	
2	Unit Power Sup- ply Connector	Connect the unit power supply (24 VDC).	
3	Status indicator	It indicates the communication state and the operation state of I/O terminals.	
4	Node address Switch	It sets node addresses of terminals (decimal). Setting range is 00 to 99.	
5	Input indicator (IN1 0 to 15, IN2 0 to 15)	Indicates the state of input contact (ON/OFF). Input terminal: Not lit: Contact OFF (input OFF state) Lit in yellow: Contact ON (input ON state)	
6	I/O connector (0 to 15×2)	Connects an external device.	
7	DIN track mounting hook	Fixes a slave to a DIN track.	

#### 32 Outputs Terminal GX-OD3218/OD3228

No.	Name	Function	
1	Communications connector	(CN IN) Connects the communications cable which comes from the Master Unit side. (CN OUT) Connects the communications cable of the next I/O terminal.	
2	Unit Power Sup- ply Connector	Connect the unit power supply (24 VDC).	
3	Status indicator	It indicates the communication state and the operation state of I/O terminals.	
4	Node address Switch	It sets node addresses of terminals (decimal). Setting range is 00 to 99.	
5	Output indicator (OUT1 0 to 15, OUT2 0 to 15)	Indicates the state of output contact (ON/OFF).  Not lit: Contact OFF (output OFF state)  Lit in yellow: Contact ON (output ON state)	
6	I/O connector (0 to 15 × 2)	Connects an external device.	
7	I/O power supply connector	Supplies the I/O power.	
8	DIN track mounting hook	Fixes a slave to a DIN track.	

#### 16 Inputs/16 Outputs Terminal GX-MD3218/MD3228

No.	Name	Function	
110.	Humo	1 111	
1	Communications connector	(CN IN) Connects the communications cable which comes from the Master Unit side. (CN OUT) Connects the communications cable of the next I/O terminal.	
2	Unit Power Sup- ply Connector	Connect the unit power supply (24 VDC).	
3	Status indicator	It indicates the communication state and the operation state of I/O terminals.	
4	Node address Switch	It sets node addresses of terminals (decimal). Setting range is 00 to 99.	
5	Input indicator (0 to 15)	Indicates the state of input contact (ON/OFF).  Not lit: Contact OFF (input OFF state)  Lit in yellow: Contact ON (input ON state)	
6	Output indicator (0 to 15)	Indicates the state of output contact (ON/OFF).  Not lit: Contact OFF (output OFF state)  Lit in yellow: Contact ON (output ON state)	
7	I/O connector (0 to 15 × 2)	Connects an external device. <top side=""> For input device  <bottom side=""> For output device</bottom></top>	
8	I/O power supply connector	Supplies the I/O power. (For output device)	
9	DIN track mount- ing hook	Fixes a slave to a DIN track.

**Dimensions** (Unit: mm)

## **Analog I/O Terminal 2-tier Terminal Block Type**

# GX-AD0471/DA0271

# Analog I/O terminal with screw terminal block for EtherCAT communications

- The input/output range can be easily changed by the setting with the switch.
- Detachable screw terminal block facilitates the maintenance.
- Moving average calculation function. Settings within the range of  $100\mu s$ -64ms. (For input only.)
- Disconnection detection function.
   (For input only and for usage with 1-5V or 4-20mA ranges.)
- Selectable node address setting methods: setting with rotary switch and with tool software.

When setting the nodes with rotary switch, setting is easy and node identification becomes possible for maintenance.

#### **General Specifications**

For Common Specifications of I/O terminals, refer to page 1.

## Input Section Specifications 4-point Input Terminals

Item		Specification		
		Voltage input	Current input	
Input capacity		4 points (possible to set number of enabled channels)		
Input range		0 to 5V 1 to 5V 0 to 10V -10 to +10V	4 to 20mA	
Input range setting method		Input range switch: Common to input CH1/ CH2, common to input CH3/CH4 SDO communication: Possible to set input CH1 to CH4 individually		
Maximum signal i	nput	± 15 V	± 30 mA	
Input impedance		1 M $\Omega$ min.	Approx. 250 $\Omega$	
Resolution		1/8000 (full scale)		
Overall accuracy	25 °C	± 0.3% FS	± 0.4% FS	
Overall accuracy	–10 to +55 °C	± 0.6% FS	± 0.8% FS	
Analog conversion cycle		500 μs/input When 4 points are used: 2 ms max.		
A/D converted data		Other than $\pm$ 10 V: 0000 to 1F40 Hex full scale (0 to 8000) $\pm$ 10 V: F060 to 0FA0 Hex full scale (-4000 to +4000) A/D conversion range: $\pm$ 5% FS of the above data ranges.		
Isolation method		Photocoupler isolation (between input and communications lines) No isolation between input signals		
Unit power supply current consumption		120 mA max. (for 20.4 to 26.4-VDC power supply voltage)		
Weight		180 g max.		
Accessories		Four short-circuit metal fixtures (for current input) *		

Short-circuit metal fixtures are used for current input only, but store in a safe place when using for voltage inputs as well.

## Output Section Specifications 2-point Output Terminals

Item		Specification		
		Voltage output	Current output	
Output capacity		2 points (possible to abled channels)	set number of en-	
Output range		0 to 5V 1 to 5V 0 to 10V –10 to +10V	4 to 20mA	
Output range setting method		Output range switch, SDO communications: Possible to set outputs CH1 and CH2 separately.		
External output allowable load resistance		5 kΩ min.	600 Ω max.	
Resolution		1/8000 (full scale)		
Overell secures.	25 °C	± 0.4% FS		
Overall accuracy	−10 to +55 °C	± 0.8%FS		
Analog conversion cycle		500 μs/input When 2 points are us	sed: 1 ms max.	
D/A converted data		Other than ± 10 V: 0000 to 1F40 Hex full scale (0 to 8000) ± 10 V: F060 to 0FA0 Hex full scale (-4000 to +4000) D/A conversion range: ± 5% FS of the above data ranges		
Isolation method		Photocoupler isolation (between output and communications lines) No isolation between output signals		
Unit power supply current consumption		150 mA max. (for 20.4 to 26.4-VDC power supply voltage)		
Weight		190 g max.		

## **GX-Series** Analog I/O Terminal 2-tier Terminal Block Type

## **Components and functions**

#### 4-points Analog Inputs Terminal GX-AD0471

No.	Name	Function	
1	Communications connector	(CN IN) Connects the communications cable which comes from the Master Unit side. (CN OUT) Connects the communications cable of the next I/O terminal.	
2	Unit Power Supply Connector	Connect the unit power supply (24 VDC).	
3	Status indicator	It indicates the communication state and the operation state of I/O terminals.	
4	Node address Switch	It sets node addresses of terminals (decimal). Setting range is 00 to 99.	
5	Input range switch	DIP switch for setting input range.	
6	Terminal Block	Terminal block for analog input signals V1 to V4: Voltage input terminals I1 to I4: Current input terminals AG: Analog GND NC: Not used	
7	DIN track mounting hook	Fixes a slave to a DIN track.	

#### 2-points Analog Inputs Terminal GX-DA0271

No.	Name	Function	
1	Communications connector	(CN IN) Connects the communications cable which comes from the Master Unit side. (CN OUT) Connects the communications cable of the next I/O terminal.	
2	Unit Power Supply Connector	Connect the unit power supply (24 VDC).	
3	Status indicator	It indicates the communication state and the operation state of I/O terminals.	
4	Node address Switch	It sets node addresses of terminals (decimal). Setting range is 00 to 99.	
5	Output range switch	DIP switch for setting output range.	
6	Terminal Block	Terminal block for analog output signals V1+, V2+: Voltage output positive terminals I1+, I2+: Current output positive terminals 1-, 2-: Voltage/current output negative terminals NC: Not used	
7	DIN track mounting hook	Fixes a slave to a DIN track.	

## Wiring

#### GX-AD0471

\* Short-circuit the "V positive" terminal and "I positive" terminal at current input.

Use the attached short-circuit metal fixture to short-circuit terminals.

#### GX-DA0271

## **GX-Series** Analog I/O Terminal 2-tier Terminal Block Type

**Dimensions** (Unit: mm)

GX-AD0471 GX-DA0271

## **Encoder Input Terminal 3-tier Terminal Block Type**

# GX-EC0211/EC0241

# EtherCAT-compatible encoder input terminal which enables high-speed and accurate control

- Two counter function available. Pulse count within 32 bit range.
- Maximum input pulse frequency of 4MHz (Line driver input after quadrature). High-speed network EtherCAT enables high-speed and accurate control.
- Selectable two input types: Open collector input and line driver input.
- Built-in two external latch inputs and one reset input .
- Selectable node address settings: setting with rotary switches and setting on tool software.
- Detachable screw terminal will facilitate the maintenance work.

#### **General Specifications**

For Common Specifications of I/O terminals, refer to page 1.

#### **Open collector inputs Type**

#### **Terminal specifications**

Item	Specification
Counter point	2 points
Input signal	Counter phase A Counter phase B Counter phase Z Latch input (A/B) Counter reset input
Counter enabled status display	LED display (green)
Input indicators	LED display (yellow)
Unit power supply current consumption	130 mA max. (for 20.4 to 26.4 VDC power supply voltage)
Weight	390 g max.

#### **Pulse input specifications**

Item	Specification				
item	Counter	phase A/B	Count	er phase Z	
Input voltage	20.4 to 26.4 VDC (24 VDC -15 to +10%)	4.5 to 5.5 VDC (5 VDC ±5%)	20.4 to 26.4 VDC (24 VDC -15 to +10%)	4.5 to 5.5 VDC (5 VDC ±5%)	
Input current	8.4 mA (at 24 VDC)	8.6 mA (at 5 VDC)	8.4 mA (at 24 VDC)	8.6 mA (at 5 VDC)	
ON voltage	19.6 V min.	4.5 V min.	18.6 V min.	4.5 V min.	
OFF voltage	4 V max.	1.5 V max.	4 V max.	1.5 V max.	
Input restriction resistance	2.7 kΩ	430 Ω	2.7 kΩ	430 Ω	
Maximum response frequency	Single phase 500 kHz (phase difference Multiplication × 4, 125 kHz)		125 kHz	125 kHz	
Filter switching	NA		NA	NA	

#### Latch/reset input specifications

Item	Specification		
item	Latch input (A/B)	Reset input	
Internal I/O common	NPN		
Input voltage	20.4 to 26.4 VDC (24 VDC -15 to +10%)	20.4 to 26.4 VDC (24 VDC -15 to +10%)	
Input impedance	4.0 kΩ	3.3 kΩ	
Input current	5.5 mA (at 24 VDC)	7 mA (at 24 VDC)	
ON voltage/ON current	17.4 VDC min./3 mA min.	14.4 VDC min./3 mA min.	
OFF voltage/OFF current	5 VDC max./1 mA max.	5 VDC max./1 mA max.	
ON response time	3 μs max.	15 μs max.	
OFF response time	3 μs max.	90 μs max.	

Note: For the pulse input timing specifications, refer to USER'S MANUAL (Cat. No. W488).

## **Components and functions**

Open collector inputs Type GX-EC0211 Line driver inputs Type GX-EC0241

No.	Name	Function	
1	Communications Connectors	(CN IN) Connects the communications cable which comes from the Master Unit side. (CN OUT) Connects the communications cable of the next I/O terminal.	
2	Unit Power Supply Connector	Connect the unit power supply (24 VDC).	
3	Status Indicators	It indicates the communication state and the operation state of I/O terminals.	
4	Node address Switches	It sets node addresses of terminals (decimal). Setting range is 00 to 99.	
5	Inputs Indicators	The indicators show the status of the inputs of each channel. For details, refer to GX Series Operation Manual (Cat.No.W488).	
6	Terminal Block	Connects external devices and the I/O power supply. For details, refer to GX Series Operation Manual (Cat.No.W488).	
7	DIN track mounting hook	Fixes Slave Unit to a DIN track.	

## Wiring

#### Open collector inputs Type GX-EC0211

## **Expansion Units**

# **XWT-** $\Box$ **D08(-1)/** $\Box$ **D16(-16)**

# Expansion I/O Units make expansion easy!

- Flexible expansion with many different combinations.
- Removable I/O terminal block enables faster startup time and improved maintainability.
- Common expansion unit with DeviceNet (DRT2-Series) and CompoNet (CRT1-Series).

#### **General Specifications**

For Common Specifications of I/O terminals, refer to page 1.

#### Input Section Specifications 8-point Input Expansion Units

ltem	Specification		
Item	XWT-ID08	XWT-ID08-1	
Internal I/O common	NPN	PNP	
I/O capacity	8 inputs		
ON voltage	15 VDC min. (between each input terminal and the V termi- nal)	15 VDC min. (between each input terminal and the G termi- nal)	
OFF voltage	5 VDC max. (between each input terminal and the V termi- nal)	5 VDC max. (between each input terminal and the G termi- nal)	
OFF current	1.0 mA max.		
Input current	At 24 VDC: 6.0 mA max./input At 17 VDC: 3.0 mA min./input		
ON delay	1.5 ms max.		
OFF delay	1.5 ms max.

## **IO-Link Master Unit**

# **GX-ILM08C**

IO-Link makes sensor level information visible and solves the three major issues at manufacturing sites!

The unit for M12 Smartclick connector can be used in watery, and dusty environments.

- Downtime can be reduced.
   Notifies you of faulty parts and such phenomena in the Sensor in real time.
- The frequency of sudden failure can be decreased.

  Condition monitoring of sensors and equipment to prevent troubles.
- The efficiency of changeover can be improved.

  The batch check for individual sensor IDs significantly decreases commissioning time.

#### **Features**

- The host controller can cyclically read control signals, status \*1, wiring, and power supply status of IO-Link sensors. Because an IO-Link System can cyclically read analog data such as the amount of incident light in addition to ON/OFF information, it can be used for predictive maintenance based on detection of such things as decreases in the amount of light.
- User-specified data in IO-Link devices can be read and written from the host controller when necessary.
- Digital signals can be input rapidly from IO-Link sensors \*2 during IO-Link communications.
- IO-Link sensors can be combined with non-IO-Link sensors.
- Incorrect connections of IO-Link sensors can be checked when IO-Link communications start.
- Backup and restoration of IO-Link device parameters make replacement of IO-Link sensors easier.
- IO-Link sensors can be easily replaced with non-IO-Link sensors without changing the data address settings. \*3
- Sensors can report their errors to the master, which facilitates locating errors from the host.
- The total number of retries in cyclic communications can be recorded. You can use this value to check for the influences of noise and other problems.
  - (When EtherCAT is used as the host communication interface)
- Up to eight sensors can be connected. IP67 protection.
- \*1 Examples for Photoelectric Sensors: Instability detection and sensor errors
- \*2 IO-Link sensors that support digital inputs that use pin 2 of IO-Link Master Unit ports
- \*3 Bit data of IO-Link sensor can be reflected in the address of the digital input data by using digital input collection. This function is supported with the unit version 1.1 or later.

#### **System Configuration**

- \*1. When a host controller from another company is used with EtherCAT host communications, use the EtherCAT software application from the other company for a GX-type IO-Link Master Unit.
  - Note. For an NX-type IO-Link Master Unit, connect the Sysmac Studio to the EtherCAT Coupler Unit, as shown above.
- \*2. When a host controller from another company is used with EtherCAT host communications, for a GX-type IO-Link Master Unit, make the IO-Link device settings with message communications from the host controller from the other company.
  - Note. For an NX-type IO-Link Master Unit, connect CX-ConfiguratorFDT to the EtherCAT Coupler Unit, as shown above.
- \*3. You can also connect a combination of general-purpose sensors and other devices.

## **General Specification**

Home	Specification
Item	Specification
Unit power supply voltage	20.4 to 26.4 VDC (24 VDC –15%/+10%)
I/O power supply	20.4 to 26.4 VDC (24 VDC –15%/+10%)
Noise resistance	Conforms to IEC 61000-4-4, 2 kV (power line).
Vibration resistance	10 to 60 Hz with amplitude of 0.7 mm, 60 to 150 Hz and 50 m/s² for 80 minutes each in X, Y, and Z directions
Shock resistance	150 m/s <sup>2</sup> with amplitude of 0.7 mm
Dielectric strength	600 VAC (between isolated circuits)
Insulation resistance	20 MΩ min. (between isolated circuits)
Ambient operating temperature	-10 to 55°C
Ambient operating humidity	25% to 85% (with no condensation)
Ambient operating atmosphere	No corrosive gases
Altitude	2,000 m max.
Storage temperature	-25 to 65°C
Storage humidity	25% to 85% (with no condensation)
Degree of protection	IP67
Mounting	M5 screw mounting
Mounting strength	100 N
Communications connector strength	30 N
Connector types	Connectors for EtherCAT communications: M12 (D-coding, female) × 2 Power supply connector: M12 (A-coding, male) × 1 I/O connectors: M12 (A-coding, female) *1 × 8
Screw tightening torque *2	Round connectors (communications connector, power supply, and I/O): 0.39 to 0.49 N·m M5 (Unit mounted from the front):1.47 to 1.96 N·m Cover for node address setting switches: 0.4 to 0.6 N·m
Applicable standards *3	UL 61010-2-201, EU: EN 61131-2, RCM, KC, IO-Link conformance, and EtherCAT conformance

**<sup>\*1</sup>** Confirms to Class A when used as an IO-Link connector.

<sup>\*2</sup> For SmartClick Connectors, insert the Connector all the way and turn it approx. 1/8 of a turn. Torque management is not required.

\*3 Refer to the OMRON website (www.ia.omron.com) or ask your OMRON representative for the most recent applicable standards for each model.

\* I/O power supply to devices:

This is the voltage and current value supplied to devices when the communications modes of the ports on the IO-Link Master Unit are IO-Link Mode or SIO (DI) Mode.

## **Function Specification**

Fu	nction	Description	
Communications	Cyclic communications	I/O data (process data) in the IO-Link devices is cyclically exchanged with the IO-Link Master Unit as the IO-Link communications master.  At the same time, this data and the status of the IO-Link Master Unit is cyclically exchanged with the controller, with the IO-Link Master Unit operating as a slave of the controller. Cyclic communications can be used to check the amount of detection performance deterioration in devices, and to check changes in usage conditions such as the amount of incident light for photoelectric sensors, stability detection margins, and excessive proximity for proximity sensors.	
Communications	Message communications	The controller can send messages (commands) to the IO-Link Master Unit and receive the response from the IO-Link Master Unit. The IO-Link Master Unit can also function as a gateway to send messages (commands and responses) between the controller and the IO-Link devices.  Refer to 6-3 Message Communications in the IO-Link System User's Manual (Cat. No. W568).  During operation, you can change and adjust device parameters, such as threshold settings, tuning execution, and ON-delay time changes, from a program.  Or, during operation, you can check the internal status, such as the operating times of devices.	
Communications mode	settings	You can select any of the following modes for each port: IO-Link Mode, SIO (DI) Mode, SIO (DO) Mode, and Disable Port This allows you to combine IO-Link communications and digital I/O in a single unit.	
Digital inputs for pin 2		In IO-Link Mode, you can perform digital input with pin 2 while performing IO-Link communications.	
Automatic baud rate secommunications	tting for IO-Link	The IO-Link Master Unit automatically matches the specific baud rates (COM1, COM2, or COM3) of the IO-Link devices to communicate with the IO-Link devices.  Therefore, it is not necessary to set the baud rate of the connected device for each port.	
Connected device verification		This function is used to verify the configuration of IO-Link devices that are connected to the IO-Link Master Unit against the registered IO-Link Device Configuration Settings when the power supply is turned ON. The user can enable or disable connected device verification.	
IO-Link communication	s error detection	This function detects I/O cable breaks, disconnections from IO-Link device ports, error-level device events, device configuration verification errors, and IO-Link device malfunctions.	
Detection of short-circuits in I/O cables		This function detects short-circuits in I/O cables.	
Nortification of input data validity		The controller can use the Input Data Enabled Flags to determine whether the process input data for IO-Link communications is valid.	
Load rejection for controller communications error		This function turns OFF outputs from the IO-Link Master Unit when a communications error occurs in communications with the controller in IO-Link Mode or in an SIO mode.  This prevents incorrect output operations when communications error occurs.	
IO-Link total communic	ations lost frames	The IO-Link total communications lost frames can be read from the CX-ConfiguratorFDT. You can use this function to determine communications status as affected by I/O cable noise or other factors.	
Digital input filter		This function is used to eliminate chattering and noise of the input signal for digital inputs in SIO(DI) Mode or for digital inputs for pin 2 in IO-Link Mode. It prevents data change and stabilizes the input signal even in situations where the input data changes due to chattering or noise and the bit status is unstable.	
Digital input collection *		In IO-Link Mode, this function reflects the specified bit data in the input data from the IO-Link device on the digital input data of the IO-Link Master Unit.  As a result, the bit data in the input data from the IO-Link device can be aggregated into the digital input data of the IO-Link Master Unit.  One bit for each IO-Link port can be aggregated.  This function cannot be used in SIO (DI) Mode and SIO (DO) Mode.  If you use this function, digital inputs with pin 2 cannot be used.	
Backup and restoration of parameter settings in IO-Link devices		This function is used to back up parameter settings in IO-Link devices in the IO-Link Master Unit or restore them to IO-Link devices.  This eliminates the need to set parameters again after replacing an IO-Link device.	
Event log		This function records events, such as errors and status changes, that occur in the IO-Link Master Unit and IO-Link devices.	

<sup>\*</sup>This function is supported with the unit version 1.1 or later.

## **EtherCAT Communications Specifications**

Item Specification	
Communications protocol	EtherCAT protocol
Modulation	Baseband
Baud rate	100 Mbps
Physical layer	100BASE-TX (IEEE 802.3)
Connectors	M12 (D-coding, female) × 2 (shielded) CN IN: EtherCAT input CN OUT: EtherCAT output
Communications media	Category 5 or higher (cable with double, aluminum tape and braided shielding is recommended.)
Communications distance	Distance between nodes (Slave Units): 100 m max.
Noise resistance	Conforms to IEC 61000-4-4, 1 kV or higher.
Node address setting method	Set on hexadecimal node address switches or with a Configuration Tool.
Node address range	000 to FFF hex (0 to 4,095 decimal): Set on node address switches or with a Configuration Tool.
Indicators	UNIT PWR × 1 IO PWR × 1 L/A IN (Link/Activity IN) × 1 L/A OUT (Link/Activity OUT) × 1 RUN × 1 ERR × 1
Process data	Variable PDO mapping
PDO size/node	2 to 270 bytes
Mailbox	Emergency messages, SDO requests, SDO responses, and SDO information
Synchronization mode	Free Run Mode (asynchronous)

#### **Version Information**

GX Unit		Corresponding versions *		
			EtherCAT	
Model	Unit version	CPU Units	Sysmac Studio	CX-ConfiguratorFDT
GX-ILM08C	Ver.1.1	Ver.1.12 or later	Ver.1.20 or higher	Ver.2.2 or higher
GA-ILIVIUOC	Ver.1.0	Ver.1.12 or later	Ver.1.16 or higher	Ver.2.2 or higher

<sup>\*</sup>Some Units do not have all of the versions given in the above table. If a Unit does not have the specified version, support is provided by the oldest available version after the specified version. Refer to the user's manuals for the specific Units for the relation between models and versions.

# **Component Names and Functions**

## GX-ILM08C

No.	Name	Function	
(1)	EtherCAT communications connector, IN	EtherCAT cable connection: IN side M12 connector (D-coding, female)	
(2)	EtherCAT communications connector, OUT	EtherCAT cable connection: OUT side M12 connector (D-coding, female)	
(3)	Power supply connector	Connects to Unit power supply and I/O power supply cable. M12 connector (A-coding, male)	
(4)	I/O connectors	Connect to IO-Link sensor cables (IO-Link connector type: Class A) M12 connectors (A-coding, female)	
(5)	Node address setting switches	Used to set the EtherCAT node address.	
(6)	Status indicators	Indicate the current status of the EtherCAT Slave Unit. (RUN, ERR, L/A IN, L/A OUT, UNIT PWR, and I/O PWR)	
(7)	I/O indicators	Indicate the I/O status. (C/E and C/Q)	
(8)	Mounting holes	Used to mount the Unit with M5 screws.	

# Wiring

#### **IO-Link Mode**

Note: Even if you connect to IO-Link devices without digital inputs for pin 2, connect pin 2 as shown in the above figure. This is because connectors on the IO-Link devices and the cable with connectors on both ends connect pin 2. However, because no data enters pin 2 of the IO-Link Master Unit, digital IO-Link input data is always OFF.

Note: Connect both ends of cable shielded wires to the connector hoods.

#### **Software**

#### How to Select Required Support Software for Your Controller

The required Support Software depends on the Controller to connect. Please check the following table when purchasing the Support Software.

Product	Omron PLC System	Omron Machine Automation Controller System
Controller	CJ-series	NJ/NX-series
Software	FA Integrated Tool Package CX-One	Automation Software Sysmac Studio

#### **FA Integrated Tool Package CX-One**

	Specifications					
Product name		Number of licenses	Media	Model	Standards	
FA Integrated Tool Package CX-One Ver.4.□	The CX-One is a comprehensive software package that integrates Support Software for OMRON PLCs and components.  CX-One Version 4.□ includes CX-Programmer Ver.9.□	1 license <b>*1</b>	DVD	CXONE-AL01D-V4	_	

Note: For details, refer to the CX-One Catalog (Cat. No. R134), visit your local OMRON website.

\*1 Multi licenses (3, 10, 30, or 50 licenses) and DVD media without licenses are also available for the CX-One.

#### **Automation Software Sysmac Studio**

Please purchase a DVD and required number of licenses the first time you purchase the Sysmac Studio. DVDs and licenses are available individually. Each model of licenses does not include any DVD.

	Specifications	Specifications

socket and plug on cable ends		OMRON		XS5W-D421-E81-F
Fire-retardant, Robot cable				XS5W-D421-G81-F
			10	XS5W-D421-J81-F

Note: Refer to the Ordering Information in the catalog of the sensor to connect or the Sensor I/O Connectors/Sensor Controllers on your local OMRON website for details.

<sup>\*2</sup> Cables are available from 0.25 m to 100 m. Ask the manufacturer for details.

#### **Power Supply T-Joint Connector**

This connector is used when branching a GX-type Unit power supply.

Item	Appearance	Specification	Connector type	Model
XS5R Plug/Socket T-Joint Connector		M12	Smartclick connector	XS5R-D427-5

#### **Waterproof Cover for Connectors**

This is a waterproof cover for unused M12 GX connectors (female).

When you use this waterproof cover, you can maintain the IP67 protective structure.

The following two types of covers are available. Either one can be mounted on an EtherCAT communications connector or I/O connector.

Item	Appearance	Specification	Connector type	Materials	Model
M12 Threaded Waterproof Cover <b> </b>		M12	Screw-type connector	Brass/nickel plated	XS2Z-22
Smartclick Waterproof Cover *2		M12	Smartclick connector	PBT	XS5Z-11

- \*1 When mounting the M12 Threaded Waterproof Cover on a connector, always tighten it to a torque of 0.39 to 0.49 N•m.
- \*2 When mounting a Smartclick Waterproof Cover on a connector, torque management is not required.

#### **Tool for M12 Threaded Connectors**

The tool for tightening M12 Threaded Connectors is used when tightening to a specified torque.

Item	Appearance	Model
Torque Wrench		XY2F-0004

#### **Software**

#### **Automation Software Sysmac Studio**

Please purchase a DVD and required number of licenses the first time you purchase the Sysmac Studio. DVDs and licenses are available individually. Each model of licenses does not include any DVD.

#### Terms and Conditions Agreement

#### Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

#### Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE

PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See <a href="http://www.omron.com/global/">http://www.omron.com/global/</a> or contact your Omron representative for published information.

#### Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

#### Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

#### Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

#### Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

#### Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions. Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

2023.10

In the interest of product improvement, specifications are subject to change without notice.
