\*1. Based on a standard 4-pole motor for maximum applicable motor output.

\*2. Rated Motor Capacity is calculated with a rated output voltage of 220 V.

3. Carrier frequency can be increased up to 8 kHz while keeping this current rating. Higher carrier frequency settings require derating.

4. Carrier frequency can be increased up to 5 kHz while keeping this current rating. Higher carrier frequency settings require derating.

5. Assumes operation at rated output current. Input current rating varies depending on the power supply transformer, input reactor, wiring conditions, and power supply impedance.
