# Ultrasonic sensor

UC2000-30GM-E6R2-T-V15

- Parameterization interface for the application-specific adjustment of the sensor setting via the service program ULTRA 3000
- 2 programmable switch outputs
- Hysteresis mode selectable
- Window mode selectable
- Synchronization options
- Adjustable acoustic power and sensitivity
- Temperature compensation

Single head system

CE   c(UL)us   UKCA

Technical Data

General specifications

Sensing range	80 ... 2000 mm
Adjustment range	120 ... 2000 mm
Dead band	0 ... 80 mm
Standard target plate	100 mm x 100 mm
Transducer frequency	approx. 175 kHz
Response delay	65 ms minimum 195 ms factory setting

Indicators/operating means

LED green	solid: Power-on flashing: Standby mode or program function object detected
LED yellow 1	solid: switching state switch output 1 flashing: program function
LED yellow 2	solid: switching state switch output 2 flashing: program function

Refer to "General Notes Relating to Pepperl+Fuchs Product Information".

LED red		solid: temperature/program plug not connected flashing: fault or program function object not detected
Temperature/teach-in connector		Temperature compensation , Switch points programming , output function setting
Electrical specifications		
Operating voltage	U_B	10 ... 30 V DC , ripple 10 %$_{SS}$
No-load supply current	I_0	≤ 50 mA
Interface		
Interface type		RS 232, 9600 Bit/s , no parity, 8 data bits, 1 stop bit
Input/Output		
Synchronization		bi-directional 0 level -U_B...+1 V 1 level: +4 V...+U_B input impedance: > 12 KOhm synchronization pulse: ≥ 100 µs, synchronization interpulse period: ≥ 2 ms
Synchronization frequency		
Common mode operation		max. 30 Hz
Multiplex operation		≤ 30 Hz / n , n = number of sensors , n ≤ 5
Output		
Output type		2 switch outputs PNP, NO/NC, programmable
Rated operating current	I_e	200 mA , short-circuit/overload protected
Voltage drop	U_d	≤ 2.5 V
Repeat accuracy		≤ 0.1 % of full-scale value
Switching frequency	f	≤ 2.5 Hz
Range hysteresis	H	1 % of the adjusted operating range (default settings), programmable
Temperature influence		≤ 2 % from full-scale value (with temperature compensation) ≤ 0.2 %/K (without temperature compensation)
Compliance with standards and directives		
Standard conformity		
Standards		EN IEC 60947-5-2:2020 IEC 60947-5-2:2019
Approvals and certificates		
UL approval		cULus Listed, General Purpose
CCC approval		CCC approval / marking not required for products rated ≤36 V
Ambient conditions		
Ambient temperature		-25 ... 70 °C (-13 ... 158 °F)
Storage temperature		-40 ... 85 °C (-40 ... 185 °F)
Mechanical specifications		
Connection type		Connector plug M12 x 1 , 5-pin
Degree of protection		IP65
Material		
Housing		stainless steel (1.4305 / AISI 303) PBT plastic parts
Transducer		epoxy resin/hollow glass sphere mixture; polyurethane foam
Mass		180 g
Dimensions		
Length		94 mm
Diameter		30 mm
Factory settings		
Output 1		Switching point: 200 mm output function: Switch point operation mode output behavior: NO contact
Output 2		Switching point: 2000 mm output function: Switch point operation mode output behavior: NO contact

Possible operating modes

1. Switch point mode
When A1 < A2, both switch outputs are activated as
N.O. contacts.

Switch point 1   Switch point 2

A 1 (N.O.)
Switch output 1

A 2 (N.O.)
Switch output 2
When A1 > A2, both switch outputs are activated as
N.C. contacts.

A 1 (N.C.)
Switch output 1

A2 (N.C.)
Switch output 2

2. Window mode
To exchange the switching distances is of no effect.

A 1 (N.O.)
Switch output 1

A2 (N.C.)
Switch output 2
3. Latching mode
To exchange the switching distances is of no effect.

A 1 (N.O.)
Switch output 1

A2 (N.C.)
Switch output 2

PEPPERL+FUCHS
Programming

Programming procedure

The sensor features 2 programmable switch outputs with programmable switch points. Programming the switch points and the operating mode is done either via the sensors RS232 interface and the ULTRA 3000 software (see the ULTRA 3000 software description) or by means of the programming plug at the sensors rear end which is described here.

Programming switch points 1 and 2

1. Disconnect supply voltage
2. Remove the programming plug to activate program mode.
3. Reconnect supply voltage (Reset)
4. Place the target at the desired switch point position for A1
5. Momentarily insert the programming plug in position A1 and then remove. This will program the switch point A1.
6. Place the target at the desired switch point position for A2
7. Momentarily insert the programming plug in position A2 and then remove. This will program the switch point A2.
Notes:
- Removing the programming plug saves the new switch point position into the device memory.
- The programming status is indicated by the LED. A flashing green LED indicates that the target is detected; a flashing red LED indicates that no target is detected.

Programming the operation mode

If the program mode is still activated, continue at number 4. If not, activate program mode by performing the sequence numbers 1 to 3.

1. Disconnect supply voltage
2. Remove the programming plug to activate program mode.
3. Reconnect supply voltage (Reset)
4. Insert the programming plug in position E2/E3. By removing and reinserting the plug, the user can toggle through the three different modes of operation. The selected mode is indicated by the LEDs as shown below:
    - Switch point mode, LED A1 flashes
    - Window mode, LED A2 flashes
    - Latching mode, LEDs A1 and A2 flash
5. Once the desired mode is selected, insert the programming plug in position T. This completes the programming procedure and saves the switch points and mode of operation.
6. The sensor now operates in normal mode.

Note:

The programming plug also functions as the temperature compensation. If the programming plug has not been inserted in the T position within 5 minutes, the sensor will return to normal operating mode with the latest saved values, without temperature compensation.

Factory Setting

Factory settings
See technical data.

Indication

The sensor provides LEDs to indicate various conditions.

Synchronization

This sensor features a synchronization input for suppressing ultrasonic mutual interference ("cross talk"). If this input is not connected, the sensor will operate using internally generated clock pulses. It can be synchronized by applying an external square wave. The pulse duration must be $\geq$ 100 µs. Each falling edge of the synchronization pulse triggers transmission of a single ultrasonic pulse. If the synchronization signal remains low for $\geq$ 1 second, the sensor will revert to normal operating mode. Normal operating mode can also be activated by opening the signal connection to the synchronization input (see note below).

If the synchronization input goes to a high level for > 1 second, the sensor will switch to standby mode, indicated by the green LED. In this mode, the outputs will remain in the last valid output state.

Note:

If the option for synchronization is not used, the synchronization input has to be connected to ground (0 V) or the sensor must be operated via a V1 cordset (4-pin).
The synchronization function cannot be activated during programming mode and vice versa.

The following synchronization modes are possible:

1. Several sensors (max. number see technical data) can be synchronized together by interconnecting their respective synchronization inputs. In this case, each sensor alternately transmits ultrasonic pulses in a self multiplexing mode. No two sensors will transmit pulses at the same time (see note below).
2. Multiple sensors can be controlled by the same external synchronization signal. In this mode the sensors are triggered in parallel and are synchronized by a common external synchronization pulse.
3. A separate synchronization pulse can be sent to each individual sensor. In this mode the sensors operate in external multiplex mode (see note below).
4. A high level ($+U_B$) on the synchronization input switches the sensor to standby mode.

Note:

Sensor response times will increase proportionally to the number of sensors that are in the synchronization string. This is a result of the multiplexing of the ultrasonic transmit and receive signal and the resulting increase in the measurement cycle time.
Additional Information

Note on communication with the UC-30GM-R2 interface cable

The UC-30GM-R2 interface cable allows for communication with the ultrasonic sensor using ULTRA3000 software. The cable creates a connection between a PC RS-232 interface and the programming plug socket on the sensor. When connecting to the sensor, make certain the plug is lined up correctly; otherwise no communication will be possible. The key of the cable's plug must be aligned to the groove of the socket on the sensor (not with the arrow symbol on the sensor).

Programmable parameters with the ULTRA3000 software

- Switch point 1 and 2
- NO/NC function
- Operation mode
- Sonic speed
- Temperature offset (The inherent temperature-rise of the sensor can be considered in the temperature compensation)
- Expansion of the unusable area (for suppression of unusable area echoes)
- Reduction of the detection range (for suppression of remote range echoes)

RS 232-connection

Groove — V15-plug connector (M12x1)
Temperature/program connector (PC connection via inter-face cable UC-30GM-R2)
1: TXD
2: RXD
3: not used
4: GND
LED-window

PEPPERL+FUCHS

- Time of measuring cycle
- Acoustic power (interference of the burst duration)
- Sensitivity
- Behaviour of the sensor in case of echo loss
- Behaviour of the sensor in case of a fault
- Average formation via an allowed number of measuring cycles
- On/off-delay
- Switching hysteresis
- Selection of the parameter set, RS 232 or manually

Note:

When connected to a PC and running the ULTRA3000 software, the sensor can act as a long term data logger as well.
