**Information on Installation and Operation**

**Safety Information**

Warnung

This product must not be used in applications in which the safety of persons depends on the function of the device. This product is not a safety component as specified in the EU Machinery Directive.

**Actuator**

The linear position measurement system is optimally aligned to the geometry of Pepperl+Fuchs actuators.

**Using Your Own Actuators**

Generally speaking, it is possible for you to use your own actuators. The specified measurement accuracy of the sensor will be achieved only if the actuator has the following properties:

- Material: construction steel such as S235JR+AR (previously St37)
- Dimensions (L x W x H):  $\geq 18 \text{ mm} \times 8 \text{ mm} \times \geq 4 \text{ mm}$
- The active surface of the actuator must protrude across the entire sensor width.

**Note:**

The width of the actuator must be precisely 8 mm. If the width of the actuator deviates from this value, the position values will differ.

**Installation**

- It is possible to flush mount the device.
- The distance between the center of the measurement field (framed area on the front panel of the sensor) and the fixing base or fixing elements (e.g., protruding screw heads) of the actuator must be at least 10 mm.

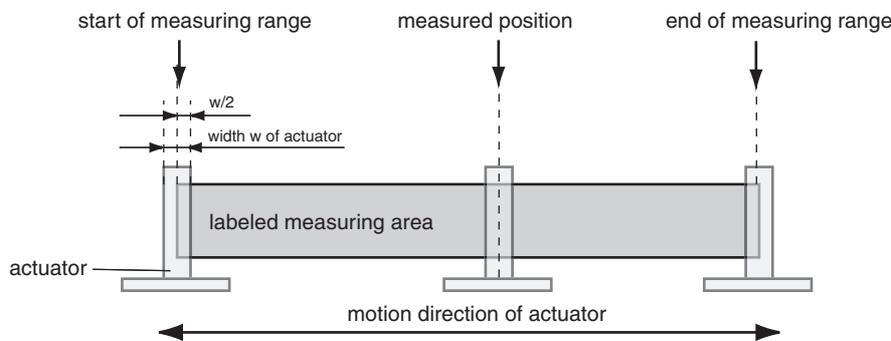

**Operating Instructions**

The specified measurement accuracy is achieved if the distance of the actuator from the sensor surface is max. 2.5 mm.

**Definition of the Measuring Range/Measured Position**

The measured position of the actuator is based on half of the width (center of the actuator).

The measuring range starts and ends when the actuator covers the measurement field marked on the sensor with half of its width in the course of its longitudinal movement.
