

## Optical reading head PGV100I-F200-B16-V15

- Mechanically rugged: no wearing parts, long operating life, maintenance-free
- CANopen interface
- Non-contact positioning on Data Matrix code tape
- Noncontact positioning with Data Matrix TAGs
- Reading of Data Matrix control codes
- Infrared light

Read head for incident light positioning system

### Dimensions

### Technical Data

#### General specifications

Passage speed	v	≤ 8 m/s
Measuring range		max. 10000 m
Light type		Integrated LED lightning , infrared
Scan rate		40 s <sup>-1</sup>
Latency		50 ms
Read distance		100 mm
Depth of focus		± 30 mm
Reading field		120 mm x 80 mm
Ambient light limit		100000 Lux
Accuracy		± 0.2 mm

#### Nominal ratings

## Technical Data

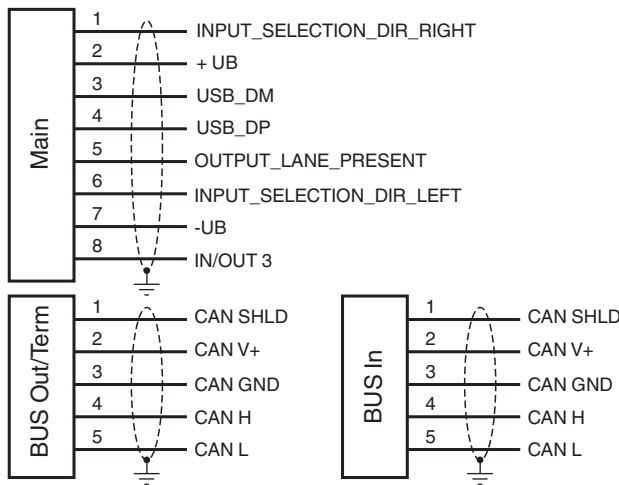

Camera		
Type	CMOS , Global shutter	
Processor		
Clock pulse frequency	600 MHz	
Speed of computation	4800 MIPS	
Digital resolution	32 Bit	
Functional safety related parameters		
MTTF <sub>d</sub>	83 a	
Mission Time (T <sub>M</sub> )	10 a	
Diagnostic Coverage (DC)	0 %	
Indicators/operating means		
LED indication	7 LEDs (communication, alignment aid, status information)	
Electrical specifications		
Operating voltage	U <sub>B</sub>	24 V DC ± 15% , PELV
No-load supply current	I <sub>0</sub>	max. 400 mA
Power consumption	P <sub>0</sub>	6 W
Interface		
Interface type	CANopen , galvanically isolated	
Data output code	binary code	
Transfer rate	max. 1 MBit/s	
Interface 2		
Interface type	USB Service	
Input		
Input type	1 funtion input 0-level: -U <sub>B</sub> or unwired 1-level: +8 V ... +U <sub>B</sub> , programmable	
Input impedance	≥ 27 kΩ	
Output		
Output type	1 to 3 switch outputs , programmable , short-circuit protected	
Switching voltage	Operating voltage	
Switching current	150 mA each output	
Conformity		
Shock resistance	EN 60068-2-27:2009	
Vibration resistance	EN 60068-2-6:2008	
Emitted interference	EN 61000-6-4:2007+A1:2011	
Noise immunity	EN 61000-6-2:2005	
Photobiological safety	exempt group according to EN 62471:2008	
Approvals and certificates		
CE conformity	CE	
UL approval	cULus Listed, Class 2 Power Source, Type 1 enclosure	
CCC approval	CCC approval / marking not required for products rated ≤36 V	
Ambient conditions		
Operating temperature	0 ... 60 °C (32 ... 140 °F) , -20 ... 60 °C (-4 ... 140 °F) (noncondensing; prevent icing on the lens!)	
Relative humidity	90 % , noncondensing	
Mechanical specifications		
Connection type	8-pin, M12x1 connector, standard (supply+IO) 5-pin, M12x1 socket, A-coded (bus out/termination) 5-pin, M12x1 connector, A-coded (bus in)	
Degree of protection	IP67	
Material		
Housing	PC/ABS	
Mass	approx. 200 g	
Dimensions		
Height	70 mm	

Release date: 2024-08-07 Date of issue: 2024-08-07 Filename: 285693-100002\_eng.pdf

Technical Data

Width	70 mm
Depth	50 mm
Factory settings	
X resolution (protocol)	0.1 mm
Y resolution (protocol)	0.1 mm
Speed resolution (protocol)	0.1 m/s
Angle resolution	0.1 °
Baud rate	500 kBit/s
Extrapolation	On
Read head address	3

Connection

Connection Assignment

Function Principle

Release date: 2024-08-07 Date of issue: 2024-08-07 Filename: 285693-100002\_eng.pdf

Function Principle

## Additional Information

### General

The PGV... reader forms part of the positioning system in the Pepperl+Fuchs incident light process. The read head's features include a camera module and an integrated illumination unit. The reader uses these features to detect a colored strip stuck to the floor to track the lane. The reader also detects control codes and position markers in the form of Data Matrix codes attached to a self-adhesive code tape. The Data Matrix code tape is usually mounted in a fixed position instead of the colored strip or parallel to the colored strip. The reader is located on the front of an automated guided vehicle and guides this vehicle along the colored strip and/or Data Matrix code tape.

### Mounting and Commissioning

Mount the reader such that the optical surface of the device captures the optimum reading distance to the colored strip and/or Data Matrix code tape (see "Technical Data"). The stability of the mounting and the manner in which the vehicle is guided ensure that the reader is not operated outside of its depth of focus range. The colored strip and/or Data Matrix code tape must not leave the maximum reading window for the reader during this process.

All readers can be adapted to optimally meet specific requirements through parameterization.

### Displays and Local Controls

The PGV... reader is equipped with seven indicator LEDs for carrying out visual function checks and rapid diagnosis. The reader is equipped with two buttons at the back for activating the alignment aid and parameterization mode.

#### LEDs

LED	Color	Label	Meaning
1	Yellow	BUS STATE	CANopen communication active
2	Red	BUS ERR	CANopen communication error
3	Green/red	PWR ERR/NO CODE	Code detected/not detected, error
4	Yellow	LANE AVAILABLE	Lane available
5	Yellow	FOLLOW LEFT	"Follow left-hand lane" activated
6	Yellow	FOLLOW RIGHT	"Follow right-hand lane" activated
7	Red/green/yellow	INTERNAL DIAGNOSTIC	Internal diagnostics

### External Parameterization

To parameterize the device externally, the parameterization code is required in the form of a Data Matrix containing the desired reader parameters. Data Matrix code cards detailing the step-by-step process for externally parameterizing the device are printed in the instruction manual for the reader.

The reader can be parameterized only within ten minutes of being switched on. If a key is pressed after ten minutes of the device being switched on, a visual signal is given by the LEDs (LED1, yellow/LED2, red/LED3, green/LED4, yellow/LED5, yellow/LED6, yellow, flashing for two seconds).

- The switchover from normal mode to parameterization mode is made by pressing button 2 on the back of the reader. To switch the device over, button 2 must be pressed and held for more than two seconds. LED4 then flashes.  
**Note:** Parameterization mode is exited automatically if the device is inactive for one minute. In this case, the reader reverts to normal mode and operates without the settings having been changed.
- Place the parameterization code in the field of vision of the camera module. After the parameterization code is detected, the green LED3 lights up for one second. If the parameterization code is invalid, LED3 lights up in red for two seconds.
- Briefly pressing button 2 will exit parameterization mode.
