

## Optical reader - safePXV PXV100A-F200-B28-V1D

- SIL 3 (EN 61508)
- Category 4 PL e (EN ISO 13849)
- PROFINET interface
- PROFIsafe interface
- Safe, non-contact positioning on Data Matrix code tape
- Traverse distance up to 100 km
- Mechanically rugged: no wearing parts, long operating life, maintenance-free

Read head for incident light positioning system

### Dimensions

### Technical Data

#### General specifications

|                      |   |                                     |
|----------------------|---|-------------------------------------|
| Passage speed        | v | ≤ 8 m/s                             |
| Measuring length     |   | max. 100000 m                       |
| Light type           |   | Integrated LED lightning (red/blue) |
| Read distance        |   | 100 mm                              |
| Depth of focus       |   | ± 30 mm                             |
| Field of view        |   | typ. 120 mm x 80 mm                 |
| Ambient light limit  |   | 30000 Lux                           |
| Accuracy             |   |                                     |
| Non safety-related X |   | ± 0.2 mm                            |
| Safety-related X     |   | See the original instructions       |

Function Principle

## Additional Information

### Function

The reader forms part of the positioning system in the Pepperl+Fuchs incident light process. The reader's features include a camera module and internal illumination unit, enabling it to detect position markers printed onto an adhesive, colored code tape in the form of Data Matrix codes. The code tape is generally mounted stationary on a fixed part of the plant, e.g., elevator shaft, monorail conveyor mounting rails, etc., and the reader is mounted parallel on the moving "vehicle," e.g., elevator car, monorail conveyor chassis, etc.

The positioning system issues position values that achieve the reliability required by SIL 3 and PL e, provided that the device is properly integrated into the plant according to the specifications given in the original instructions.

### Mounting and Commissioning

Mount the reader such that the optical surface of the device captures the optimal reading distance to the Data Matrix code tape (see "Technical Data"). The stability of the mounting and the manner in which the vehicle is guided ensure that the reader is not operated outside of its depth of focus range. The code tape must not leave the maximum reading window for the reader during this process.

### Displays and Operating Elements

The reader is equipped with the following indicator LEDs for carrying out visual function checks and quick diagnostics:

#### LEDs

| LED | Color            | Label                    | Meaning                           |
|-----|------------------|--------------------------|-----------------------------------|
| 1   | Green            | BUS LINK                 | PROFINET connection activated     |
| 2   | Yellow           | BUS TX/RX                | Data transfer                     |
| 3   | Red              | BUS ERR                  | PROFINET communication error      |
| 4   | Red/green        | PWR<br>SYSERR/NO<br>CODE | Code detected/not detected, error |
| 5   | -                | -                        | No function                       |
| 6   | -                | -                        | No function                       |
| 7   | Red/green/yellow | INTERNAL<br>DIAGNOSTIC   | Internal diagnostics              |

The SERVICE button on the back of the device is used for internal service purposes.
