# Better and brighter: Light up your journey with Harmony Modular Tower Lights

Harmony Modular Tower Lights, **launching in 2025**, feature a sleek, new design incorporating universal LEDs to maximize brightness while minimizing energy consumption.

With easy installation and a modular concept, Harmony Modular Tower Lights simplify your selection journey and enable operational efficiency.

## Better and brighter

- Elevated modern design
- 4x improvement in brightness

## Flexible

- Modular concept provides selection flexibility
- IO-Link and USB connections enable more operation capability

**Precision, sustainability, and safety** are important for maintaining peak productivity levels, particularly in environments where high performance and safety are critical.

[Journal of Machine Engineering](#)

## Efficient

- More rationalized construction, reduce 3x SKUs with the same functional coverage
- Push-in terminal reduces wiring time by up to 75%
- M12 connection reduces wiring time by up to 95%

## Sustainability focused

- Power optimization via energy-efficient LED
- Sustainable lifecycle from material to manufacturing

## Safety you can see

**Bright light = clear signals**

# Scope of substitution: from XVB to XVB7

The next-generation Harmony Modular Tower Lights (XVB7) will be available in mid-2025. Customers can seamlessly transition to the XVB7 models, ensuring their operations benefit from the latest equipment signaling innovations.

While pre-set guidelines exist for last-time buys, limited flexible and tailored plans are available. **Note that XVB and XVB7 are not interoperable.**

As the existing XVB range phases out, the XVB7 range offers a future-proof solution while maintaining compatibility with current infrastructure. Compatibility features include:

-  **Retained wiring architecture:** No need to rewire systems, reducing installation time and complexity
-  **Consistent mounting dimensions:** New models fit existing setups, avoiding installation modifications
-  **Modularity:** Allows easy customization and smooth transition for various operational needs. Retained XVB and XVU modular construction with 5-layer maximum, including buzzer (can now only be placed at the top layer)
-  **Similar voltage offers:** Retained 24VDC/AC, removed 48VDC due to phase out of incandescent technology, combined 110VAC – 240VAC into one standard AC version

## Substitution overview

# Selection journey: How to select your Harmony Modular Tower Light

## 1. Base selection

- The base module determines the voltage level
- More connection types are now available:
  - **IO-Link base** enables direct plug and play into IO-link solution with ready IODD file
  - **USB base** integrated with Schneider HMI as a solution offer
  - **M12 24VAC/DC base** to maximize efficiency from wiring

## 2. Lens selection

- Maximum of 5 layers, including the top unit
- All lenses in the new offer are 24V
- Choose from 6 colors and 4 light patterns

## 3. Top unit selection

- Top unit can be either a sounder, beacon, or top cover
- All sounders and beacons in the new offer are 24V
- **Note, the new offer's beacon is no longer a complete unit and does not include a base. Refer to the “Complete Beacon Substitution” section for details.**
- Sound buzzers are adjustable up to 102 dB with 2-tone or 8-tone buzzers (IP66) or as a self-adjustable buzzer (IP65) that adjusts automatically based on ambient noise up to 100dB
- Editable sounders are customizable for **up to 15 channels of tones or MP3 files**

## 4. Mounting accessories

Both linear base mounting and wall mounting options are available with a variety of sizing

# Four steps to select your Harmony Modular Tower Light

## 1 Base selection

- The base module determines the voltage level
- More connection types are now available:
  - **IO-Link base** enables direct plug and play into IO-link solution with ready IODD file
  - **USB base** integrated with Schneider Electric HMI as a solution offer
  - **M12 24VAC/DC base** to maximize efficiency from wiring
