

Driver LC 100W 24V IP67 L EXC UNV

excite series 24 V – not dimmable (IP67)

**Product description**

- _ Constant voltage LED driver
- _ Universal input voltage range
- _ Max. output power 100 W
- _ Nominal lifetime up to 50,000 h
- _ 5 years guarantee (conditions at www.tridonic.com)

Housing properties

- _ Casing: aluminium, grey
- _ Type of protection IP67
- _ Dry, damp and wet location
- _ Potted version: higher protection against corrosion

Functions

- _ Overtemperature protection
- _ Overload protection
- _ Short-circuit protection
- _ No-load protection

λ (at 120 V, 60 Hz, full load)	0.98
λ (at 230 V, 50 Hz, full load)	0.95
λ (at 277 V, 60 Hz, full load)	0.9C
Typ. input power in no-load operation	1.68 W
Output voltage tolerance	22.8 – 25.2 V
Max. output power	100 W
Output LF voltage ripple (< 120 Hz)	± 5 %
Starting time (output)	≤ 1 s
Hold on time at power failure (output)	≤ 1 ms
Mains burst capability	1 kV
Mains surge capability (between L - N)	5 kV
Mains surge capability (between L/N - PE)	10 kV
Surge voltage at output side (against PE)	< 0.5 kV
Max. casing temperature t_c	85 °C
Ambient temperature t_a (at lifetime 50,000 h)	45 °C
Storage temperature t_s	-40 ... +85 °C
Type of protection	IP67
Lifetime	up to 50,000 h
Guarantee (conditions at www.tridonic.com)	5 Year(s)
Dimensions L x W x H	178 x 68 x 39 mm
Hole spacing D	163 mm

3.3 Wiring guidelines

- All connections must be kept as short as possible to ensure good EMI behaviour.
- To comply with the EMC regulations run the secondary wires (LED module) in parallel.
- Mains leads should be kept apart from LED driver and other leads (ideally 5 – 10 cm distance)
- Max. length of output wires is 2 m.
- Secondary switching is not permitted.
- Incorrect wiring can damage LED modules.
- To avoid the damage of the Driver, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).

3.4 Hot plug-in

Hot plug-in is supported.

3.5 Earth connection

The earth connection is conducted as protection earth (PE). The LED driver can be earthed via metal housing. If the LED driver will be earthed, protection earth (PE) has to be used. There is no earth connection required for the functionality of the LED driver. Earth connection is recommended to improve following behaviour:

- Electromagnetic interferences (EMI)
- LED glowing at standby
- Transmission of mains transients to the LED output

In general it is recommended to earth the LED driver if the LED module is mounted on earthed luminaire parts respectively heat sinks and thereby representing a high capacity against earth.

3.6 Installation instructions

The functioning of the LC in combination with dimming devices (e.g. PWM) cannot be guaranteed and has to be checked individually before using in combination.

For fulfilling the ecodesign requirements of the European Union following has to be considered:

- Going to stand-by via PWM dimmer is not supported.
- To turn off the luminaire, mains has to be off.

5. Functions

5.1 Short-circuit behaviour

In case of a short circuit on the secondary side (LED) the LED driver switches off. After elimination of the short-circuit fault the LED driver will recover automatically.

5.2 No-load operation

The LED driver will not be damaged in the no-load operation.
A voltage of 25.2V DC is permanent at the output.

5.3 Over load protection

If the maximum load is exceeded by a defined internal limit, the LED driver enter hiccup modus.
After elimination of the overload fault the LED driver will recover automatically.

5.4 Over temperature protection

Over temperature protection will be activated for $t_c > 90^\circ\text{C}$.
The Driver is shot down when over temperature protection triggered.
Auto-recovery when fault condition removed.

6. Miscellaneous

6.1 Insulation and electric strength testing of luminaires

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to UL 8750 (informative only!) each luminaire should be submitted to an insulation test with 500 V_{DC}. The dielectric withstand test equipment shall employ a transformer of 500-VA or larger capacity and have a variable output voltage that is essentially sinusoidal or continuous direct current. The applied potential is to be increased from zero at a substantially uniform rate until the required test level is reached, and is to be held at that level for 1 minute.

As an alternative, UL8750 (informative only!) describes a test of the electrical strength with 2V AC + 1000V (or 1.414 x V DC). To avoid damage to the electronic devices this test must not be conducted.

6.2 Conditions of use and storage

Humidity: 10 % up to max. 95 %,
not condensed
(max. 56 days/year at 95 %)

Storage temperature: -40 °C up to max. +85 °C

The devices have to be within the specified temperature range (ta) before they can be operated.

The LED driver is declared as inbuilt LED controlgear, meaning it is intended to be used within a luminaire enclosure.
If the product is used outside a luminaire, the installation must provide suitable protection for people and environment (e.g. in illuminated ceilings).
